ROOM A109 SCI**

Evan Mason

University of Wisconsin-Stevens Point

A Year at Donaldson Company

Evan Mason

ABSTRACT: The knowledge that I have learned at UWSP's physics applied emphasis program I have been able to apply during my internship at Donaldson Company in Stevens Point. I have been working at Donaldson Company for over a year, and have learned and picked up many skills. Donaldson Company Inc. is a leading provider of filtration systems ranging from fuel, oil, and air. As an Engineering intern I filled the shoes of a manufacturing engineer, mainly involved with process improvement, cost reduction, and machine design and installment. I will discuss the projects I have been involved with, working on, and what I have learned from my time working at Donaldson Company Inc.

ABOUT THE SPEAKER: Evan Mason is an undergraduate at the University of Wisconsin-Stevens Point, majoring in physics with applied mechanics emphasis. He will graduate at the end of the current semester.

*Faculty, staff and students are cordially invited to attend.
Refreshments will be served beginning at 1:45 pm*
