

Impacts of 2,4-Dichlorophenoxyacetic acid (2,4-D) on early developmental life stages of freshwater fish

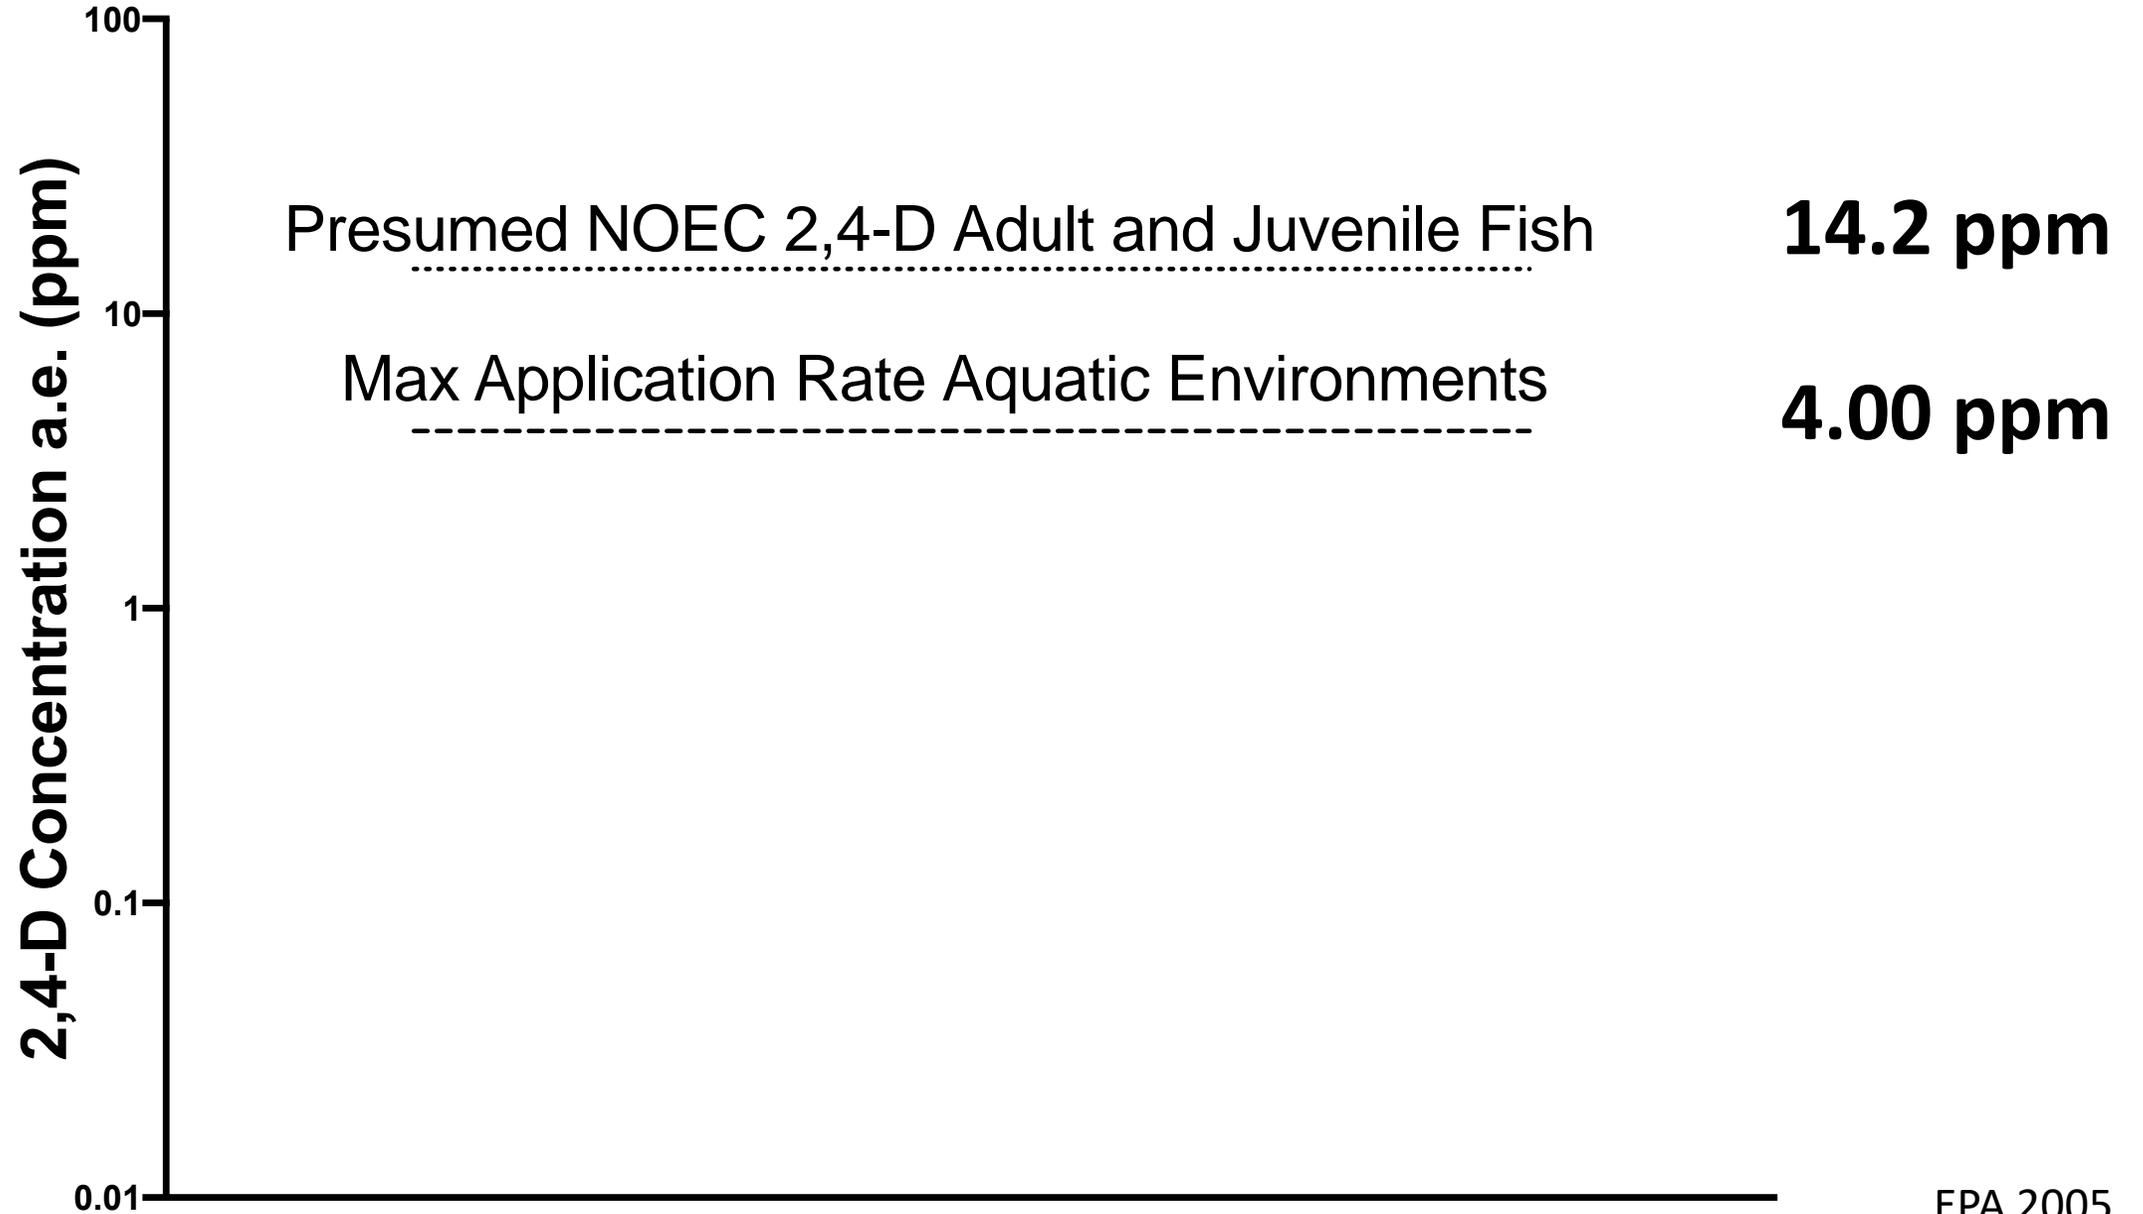

Dehnert, G.K.
dehnert2@wisc.edu

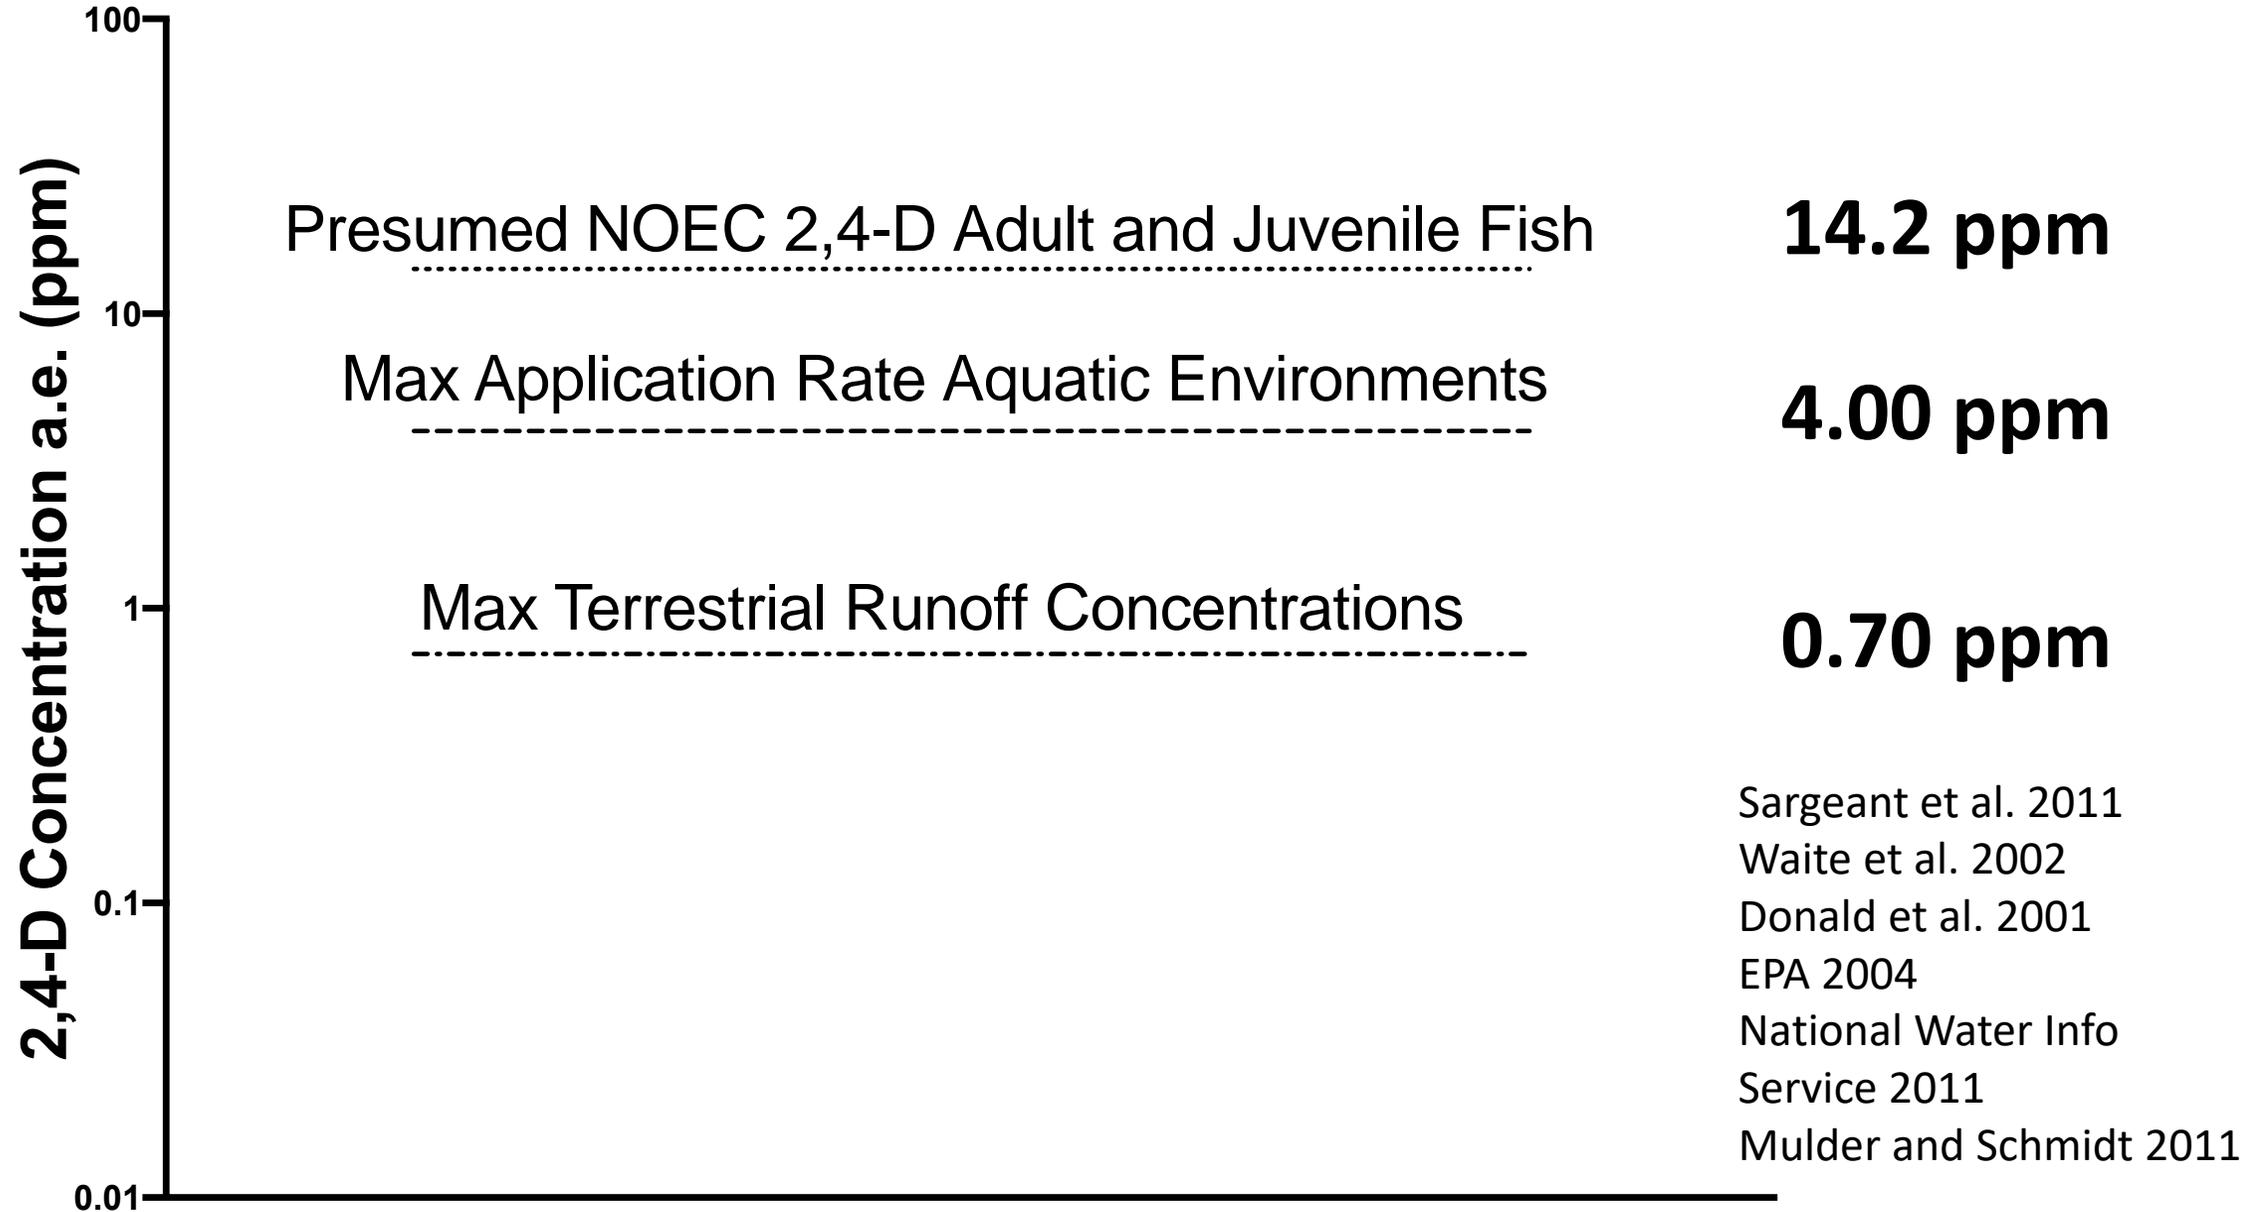

2,4-Dichlorophenoxyacetic acid (2,4-D)

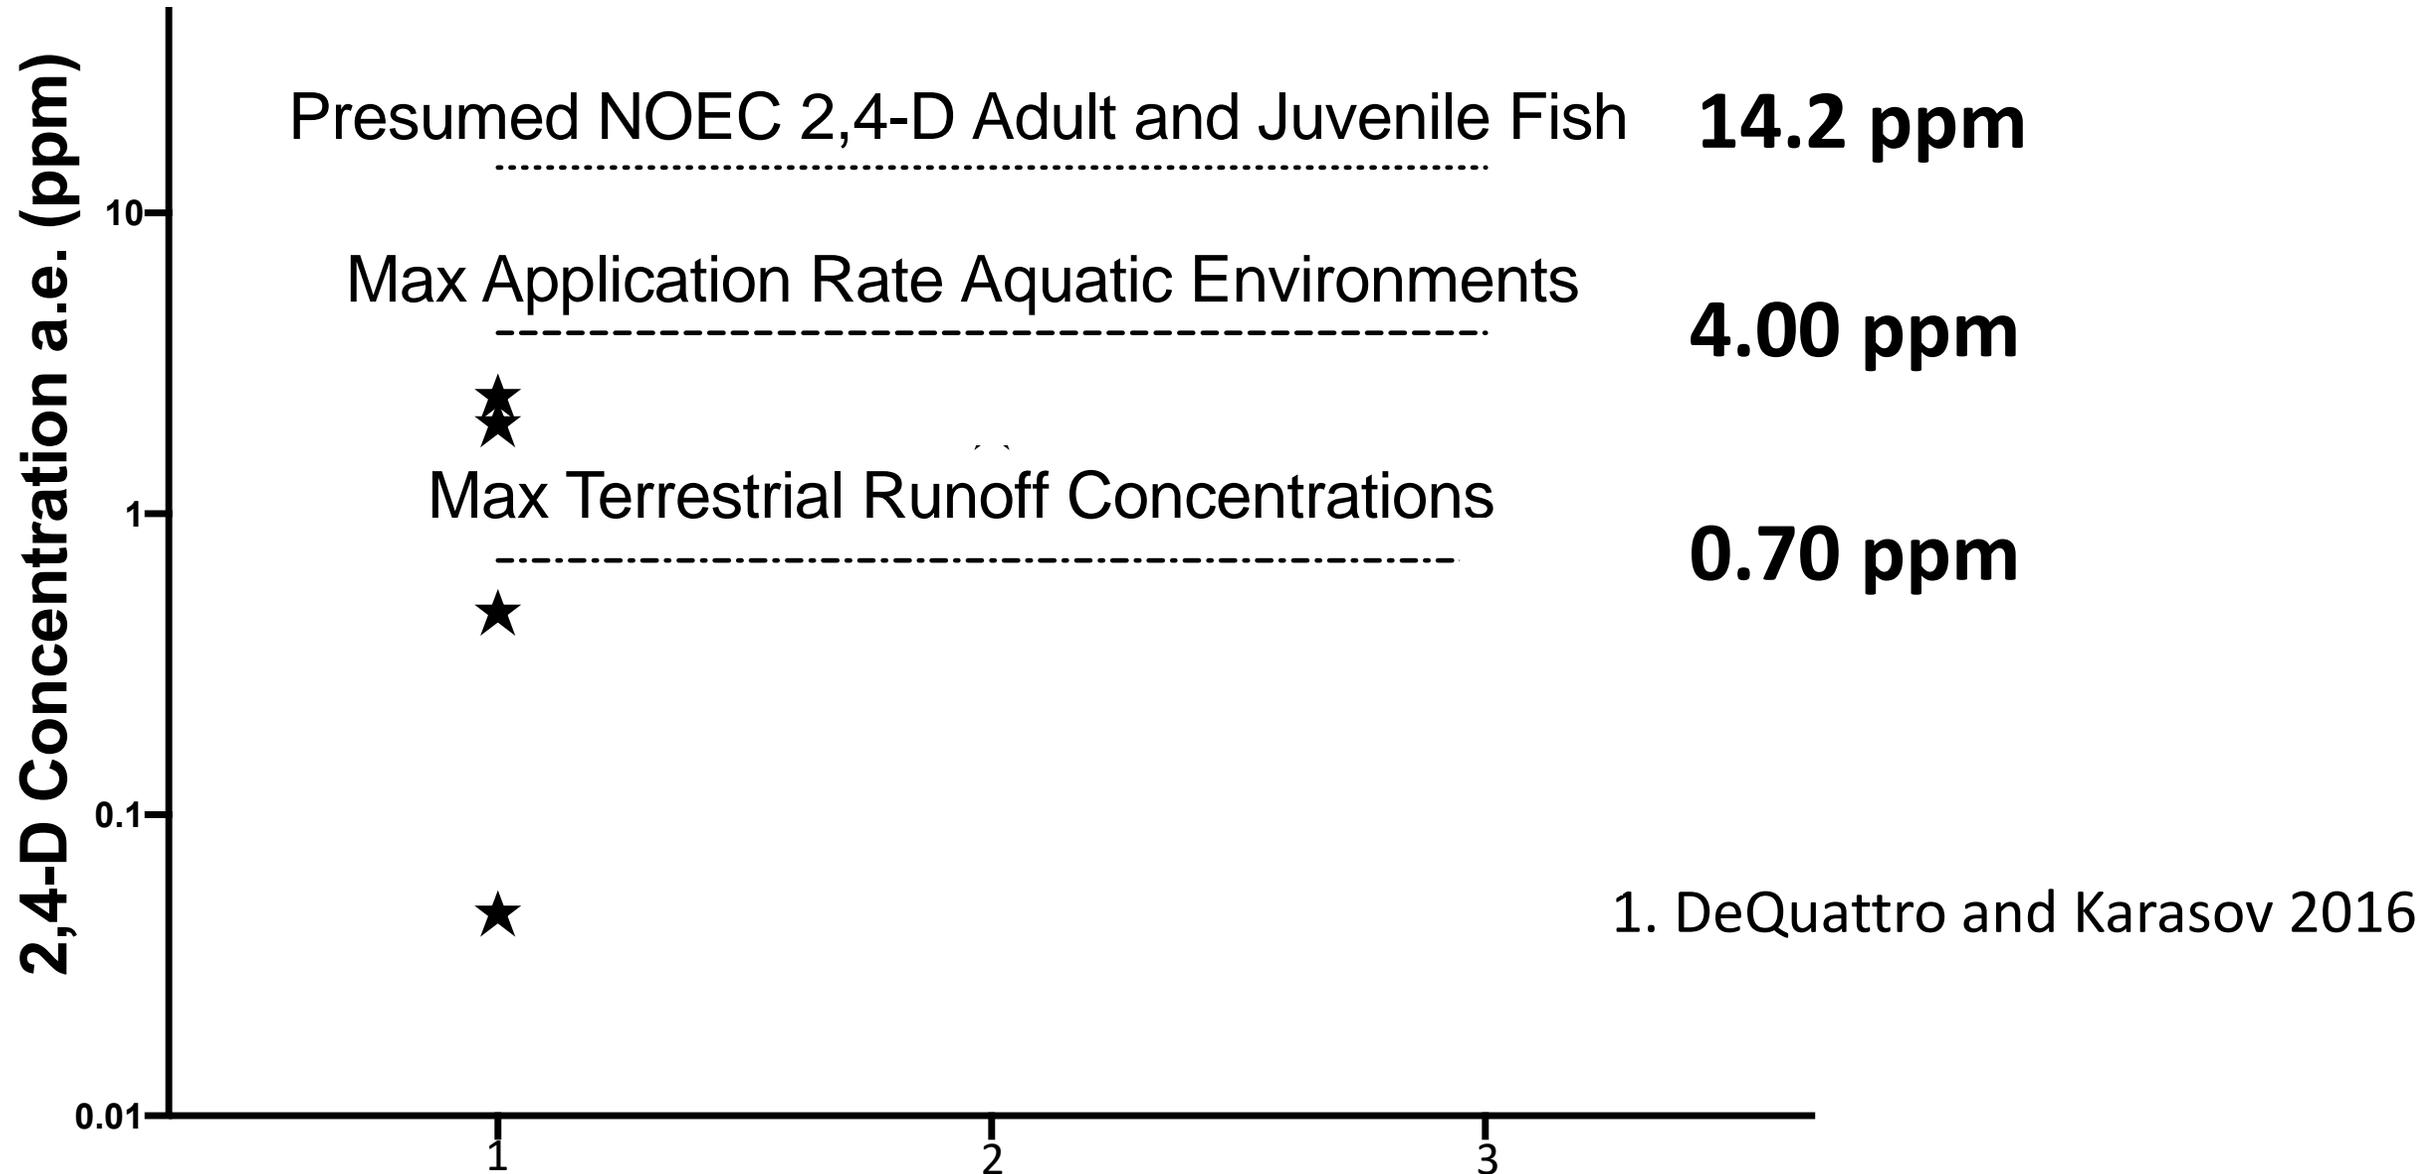

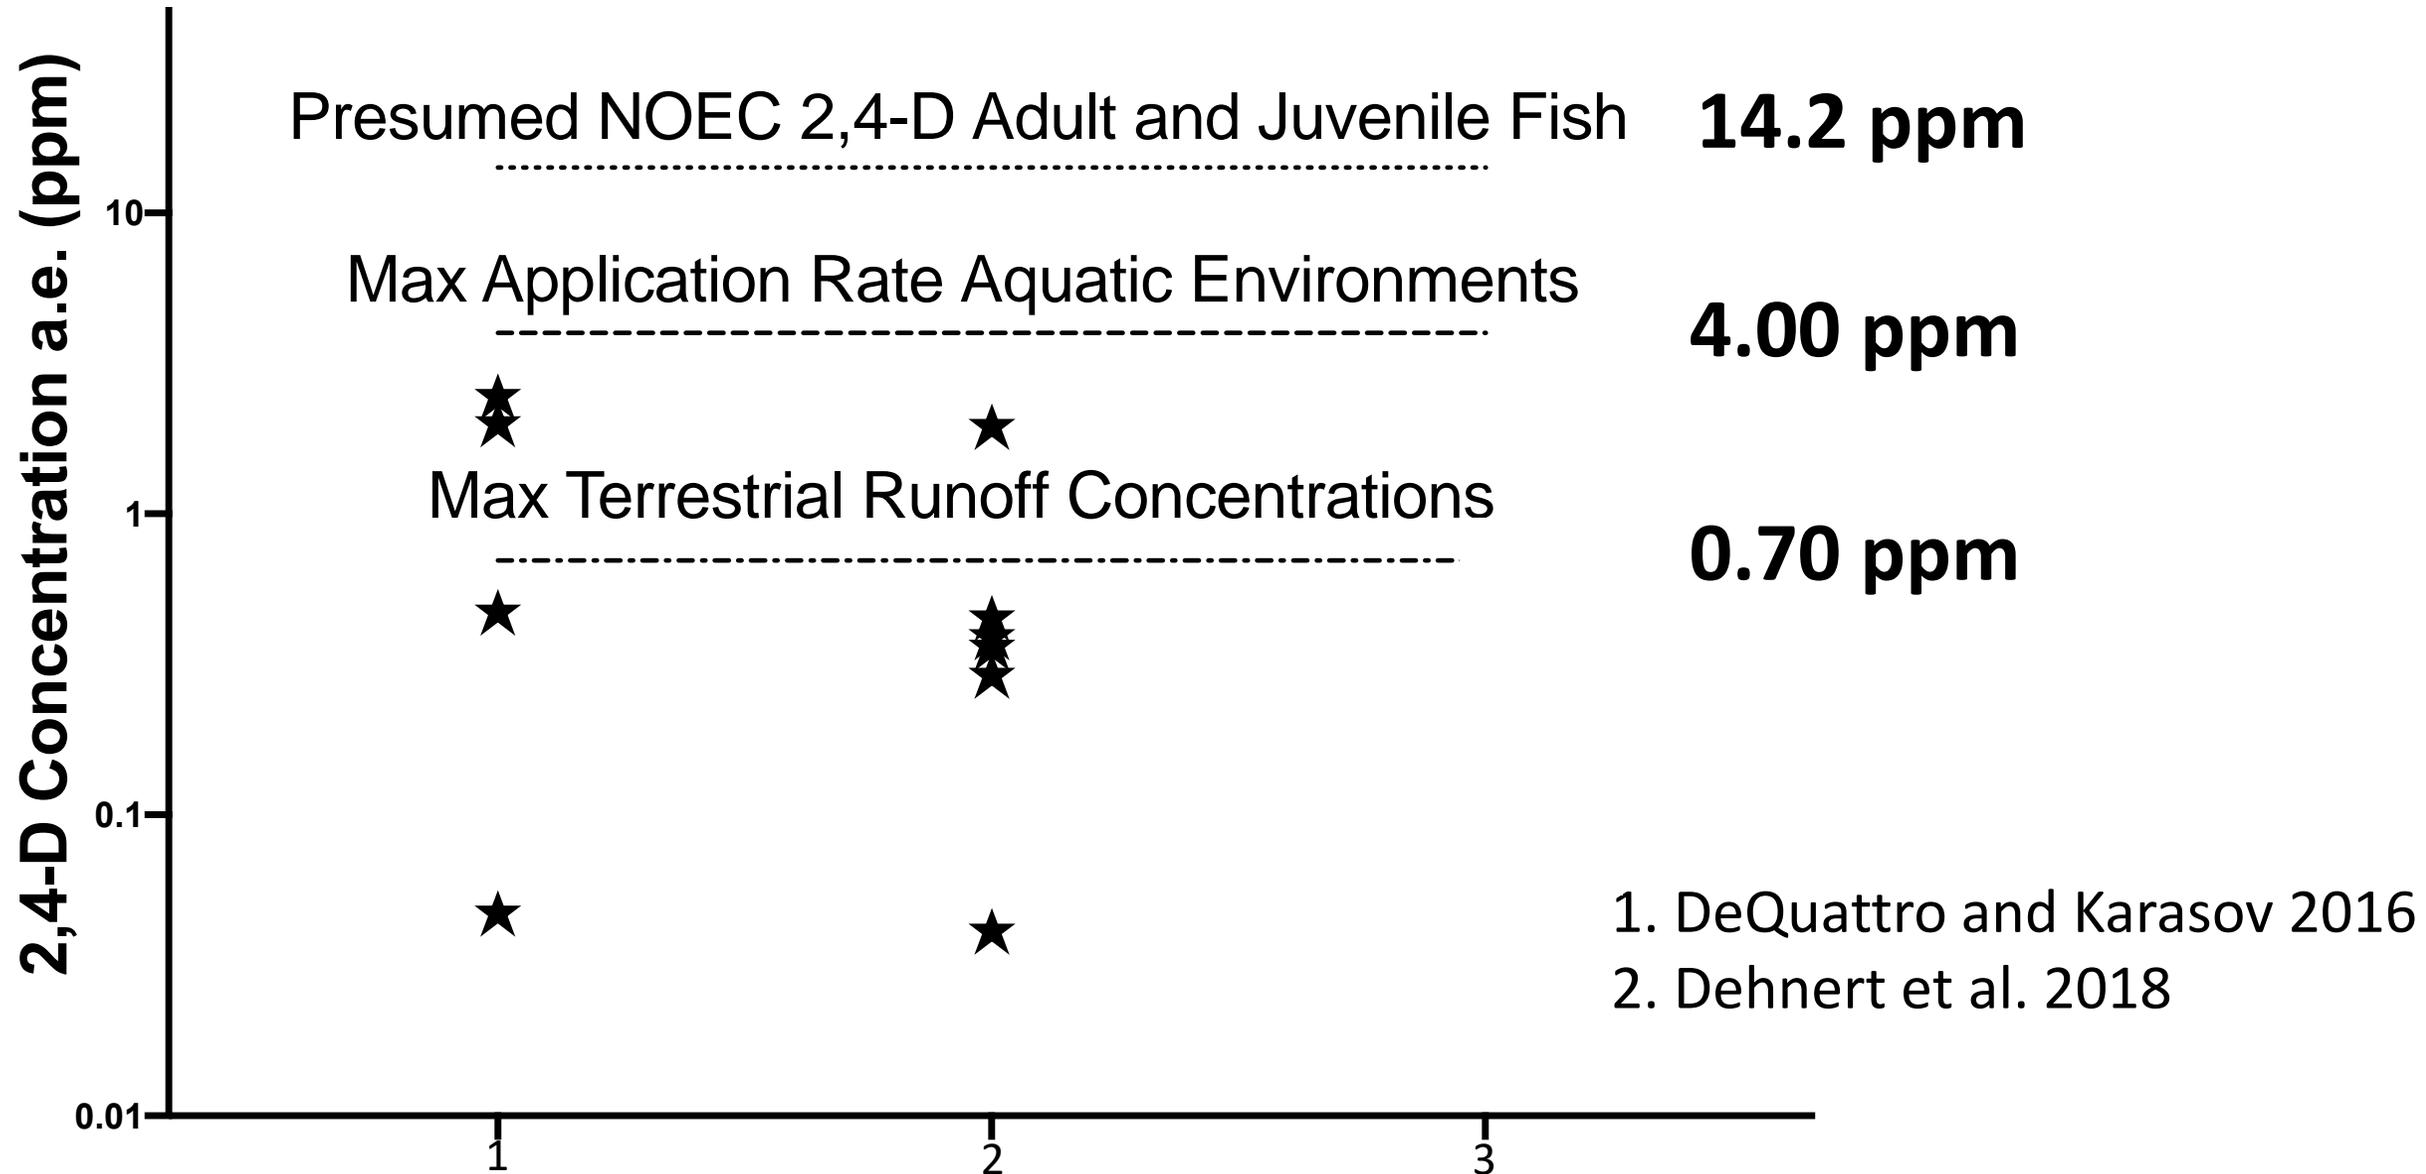

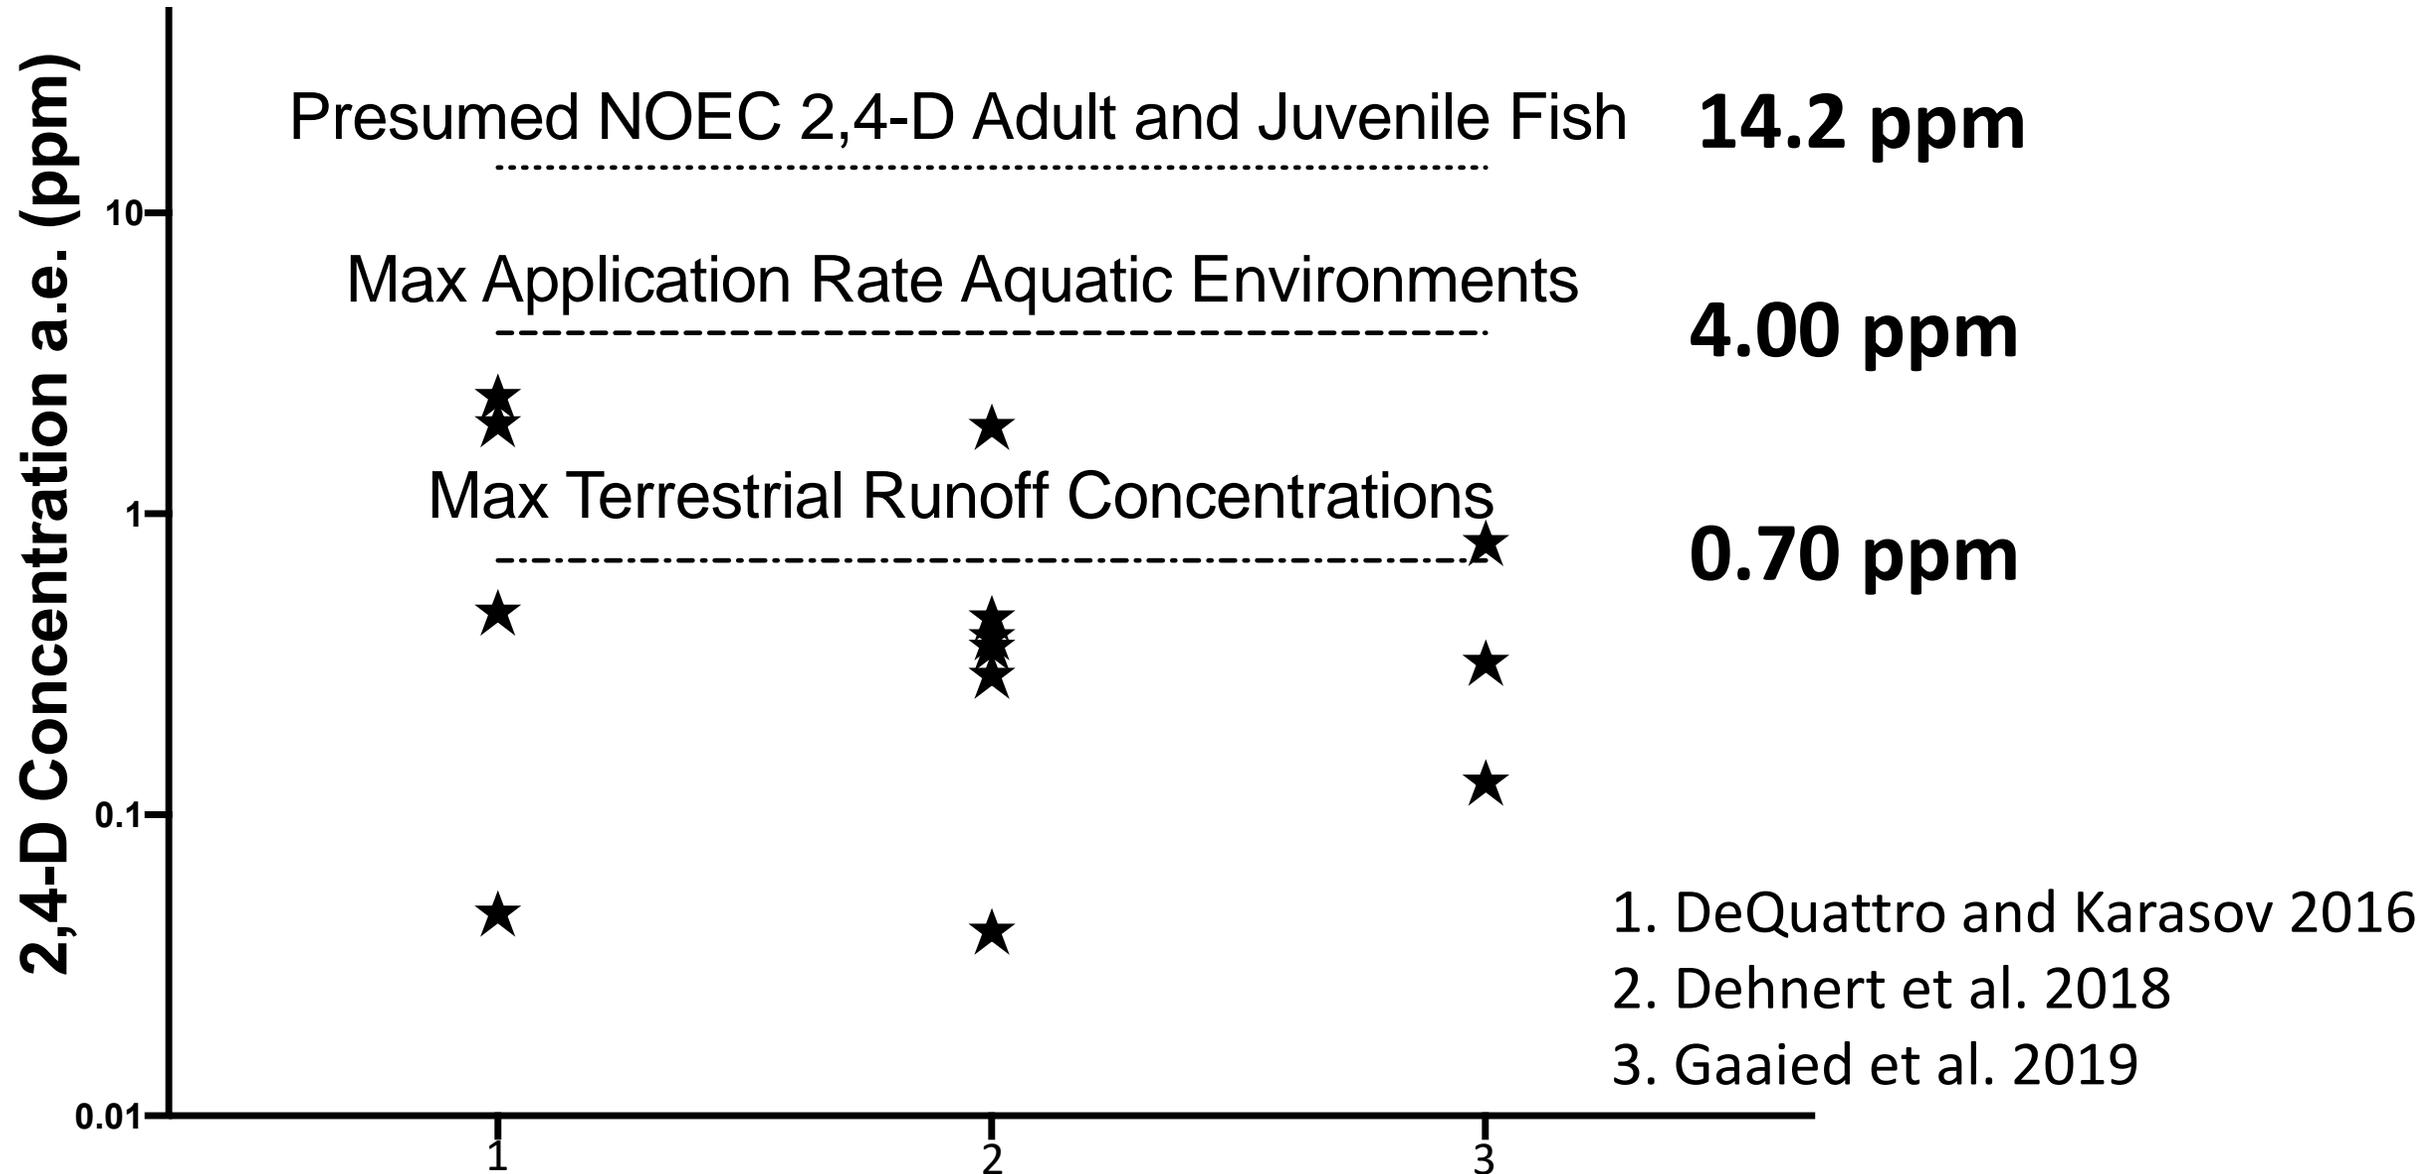

Recent studies show 2,4-D impacts on early life stages of fish

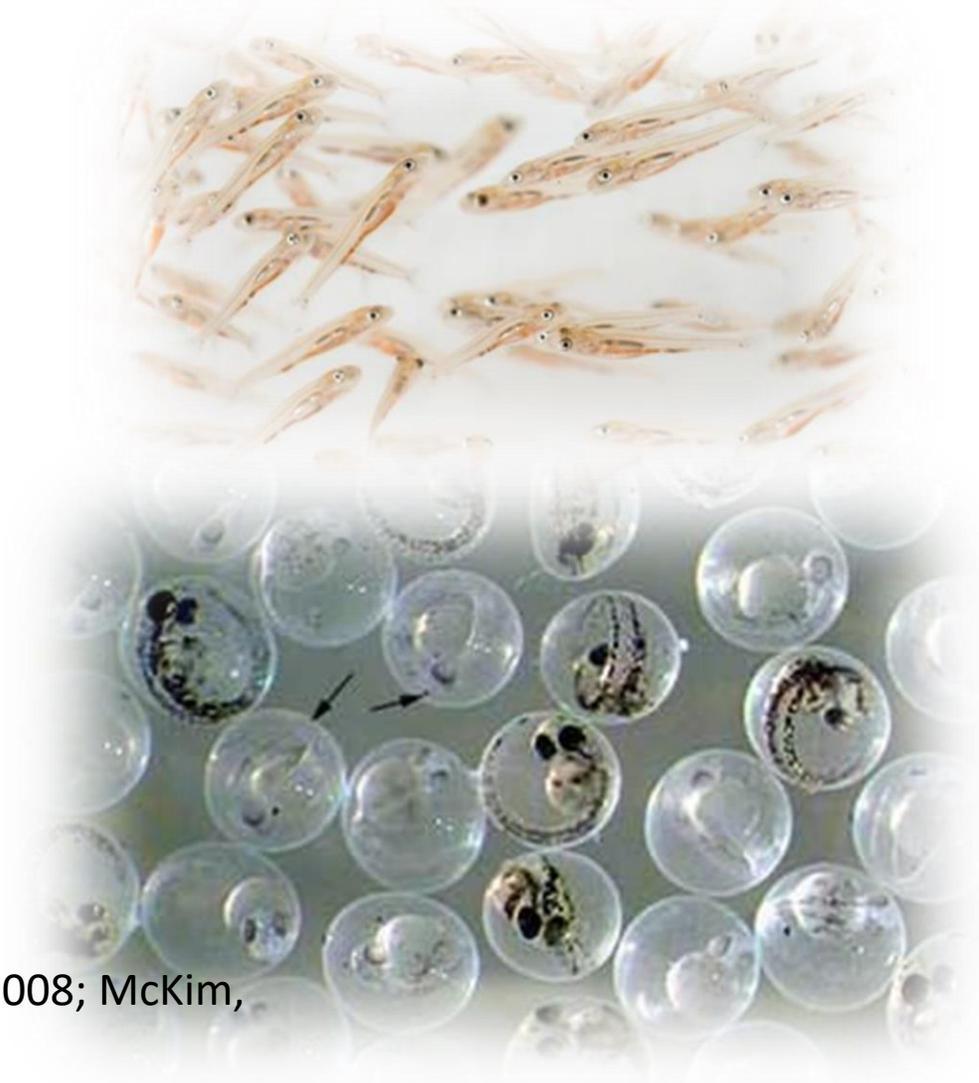

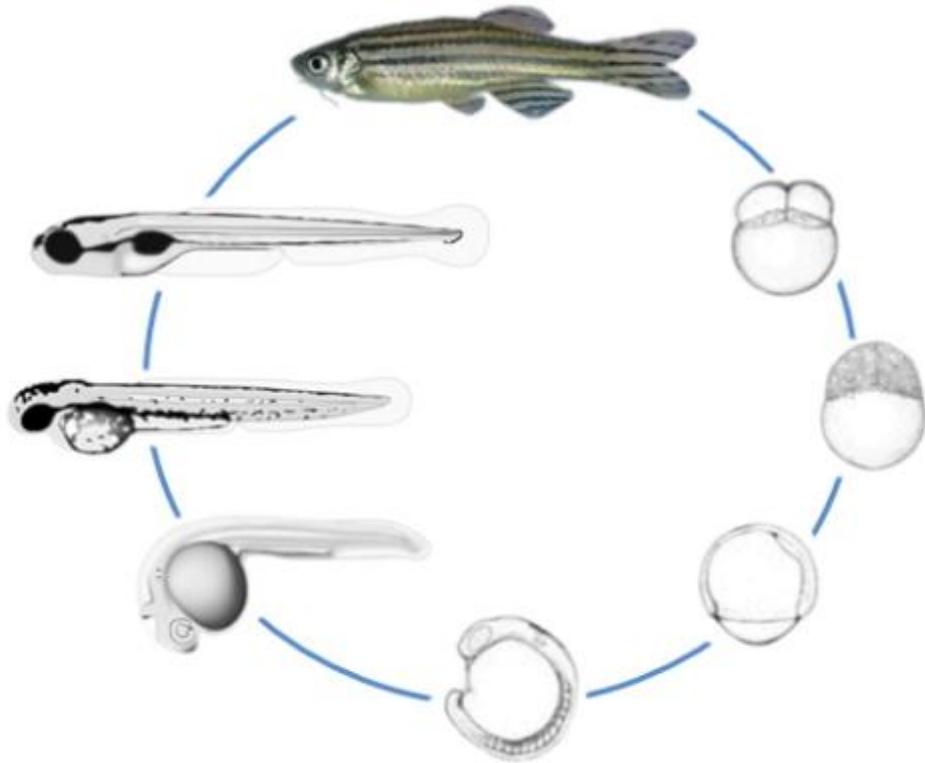

Recent studies show 2,4-D impacts on early life stages of fish

Recent studies show 2,4-D impacts on early life stages of fish

Early life stages are more sensitive to 2,4-D

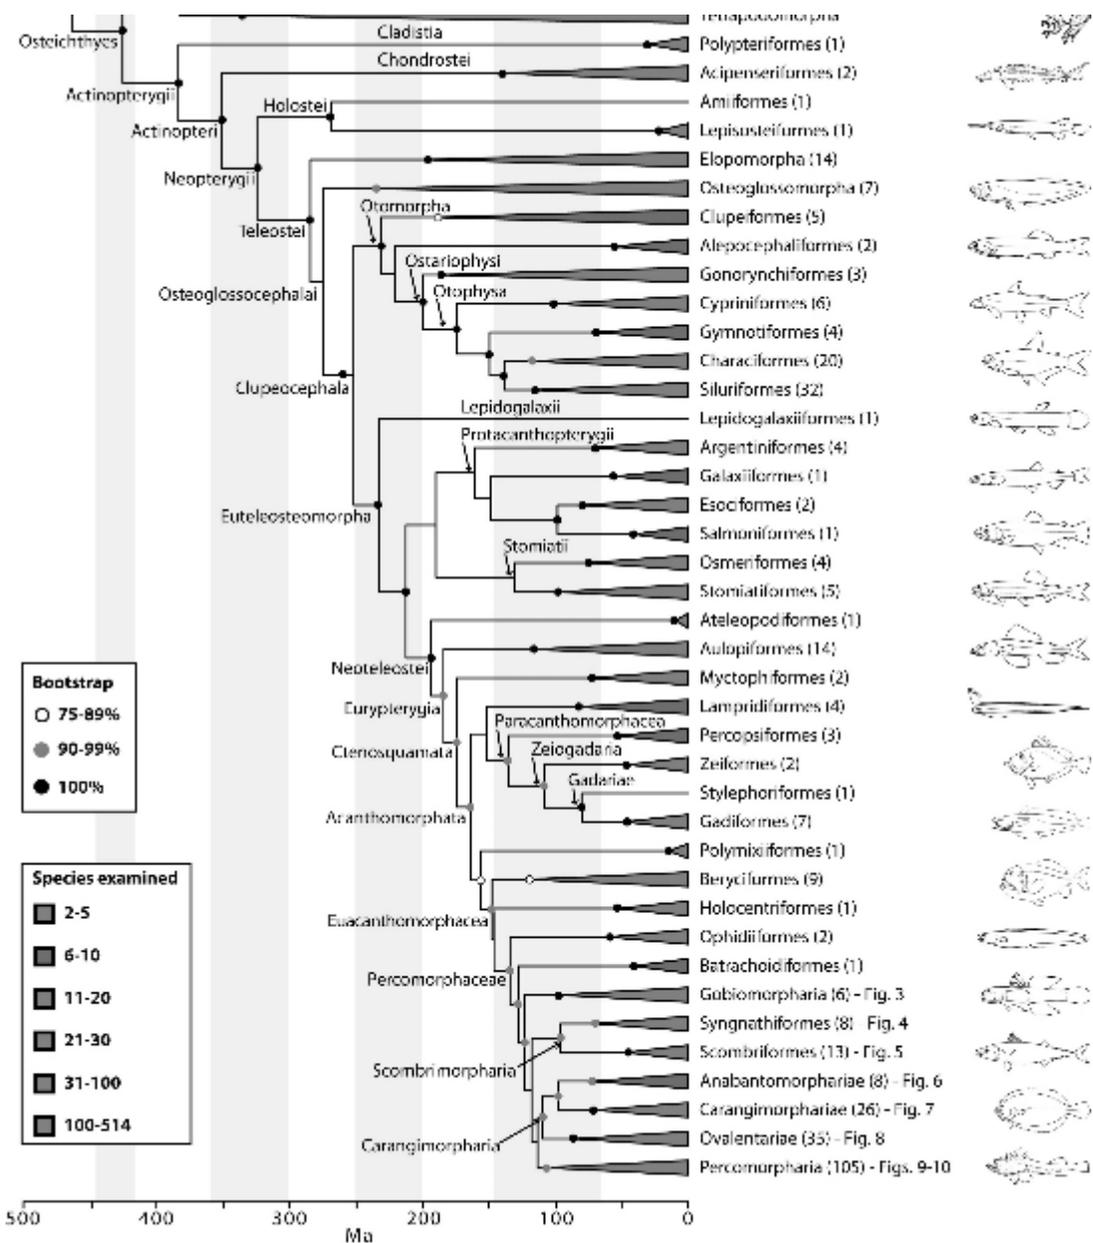

Bentivegna and Piatkowski, 1998; Lotufo and Fleeger, 1997; Mácová et al., 2008; McKim, 1977; Mohammed, 2013; Oikari et al., 2002

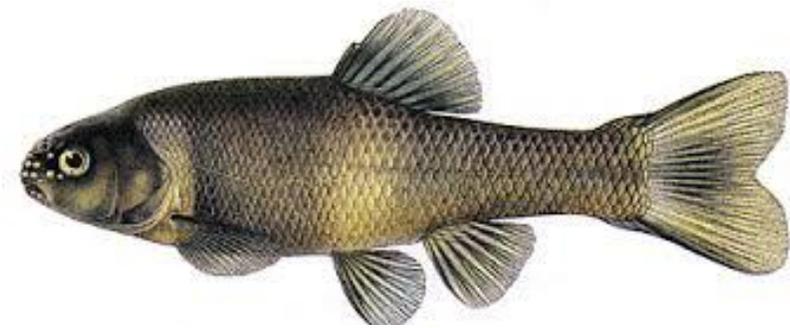

Danio rerio (Zebrafish)

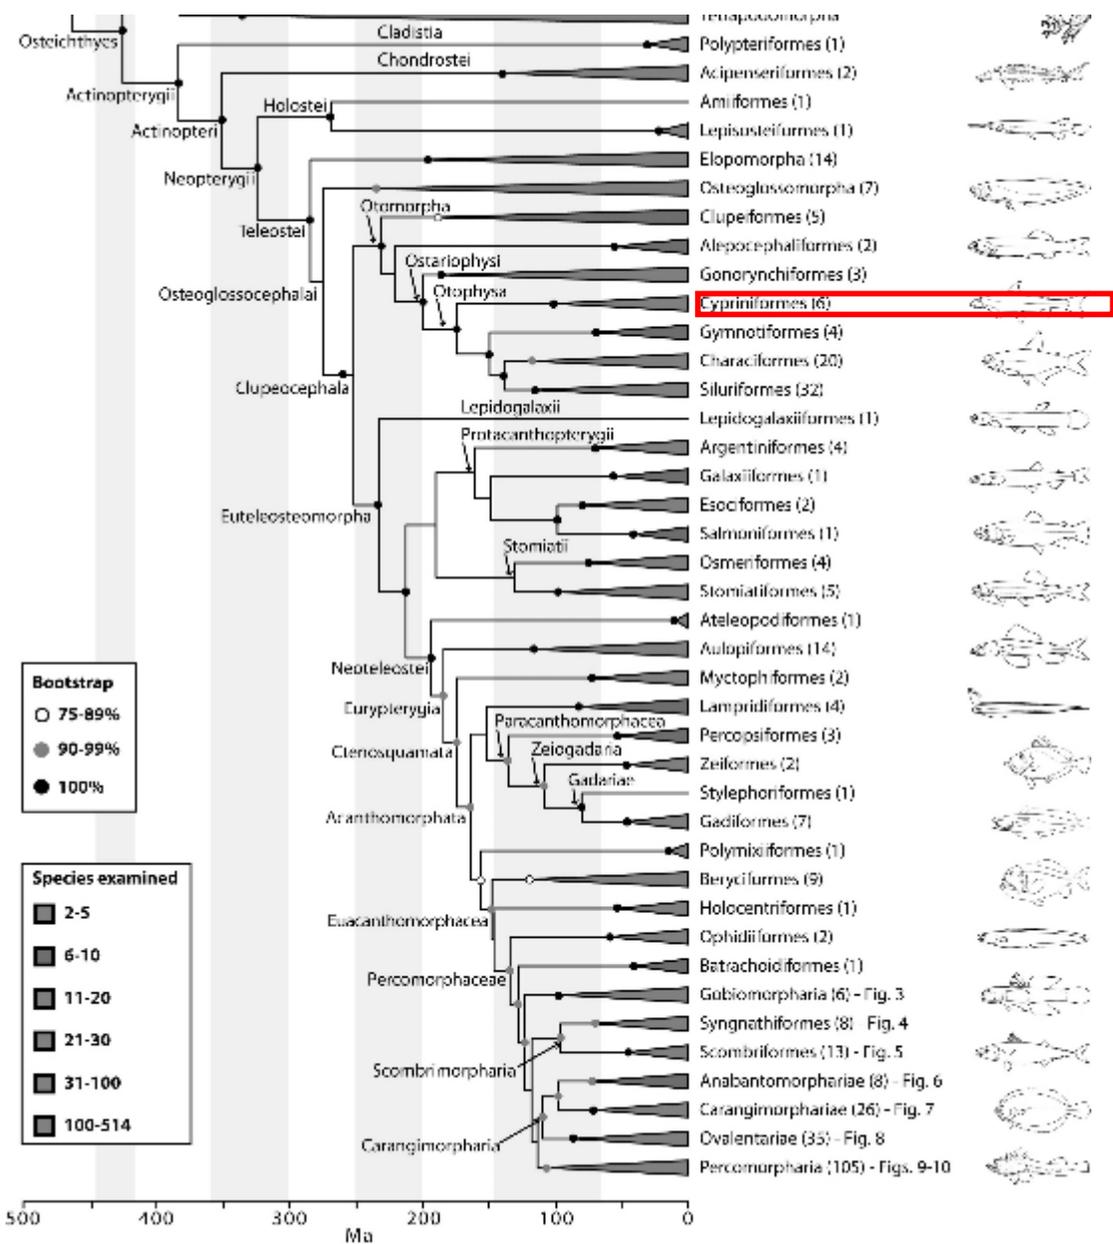

Pimephales promelas (Fathead minnow)

Pimephales promelas (Fathead Minnow)

Phylogenetic Pseudoreplication

“Phylogenetic Pseudoreplication is caused by presence of phylogenetic signal in the data (i.e., the degree of similarity in trait values between species due to their common ancestry)”

Does 2,4-D exposure only impact early developing life stages of Cyprinidae?

2,4-D Target Concentrations

Embryo Assay

- Exposure from fertilization until hatch
- Assess survivorship and deformities
- Unaffected embryo = Alive with no deformities
- 0.00 ppm (control), 0.05 ppm, 0.50 ppm, and 2.00 ppm 2,4-D

Unaffected

Common Deformities

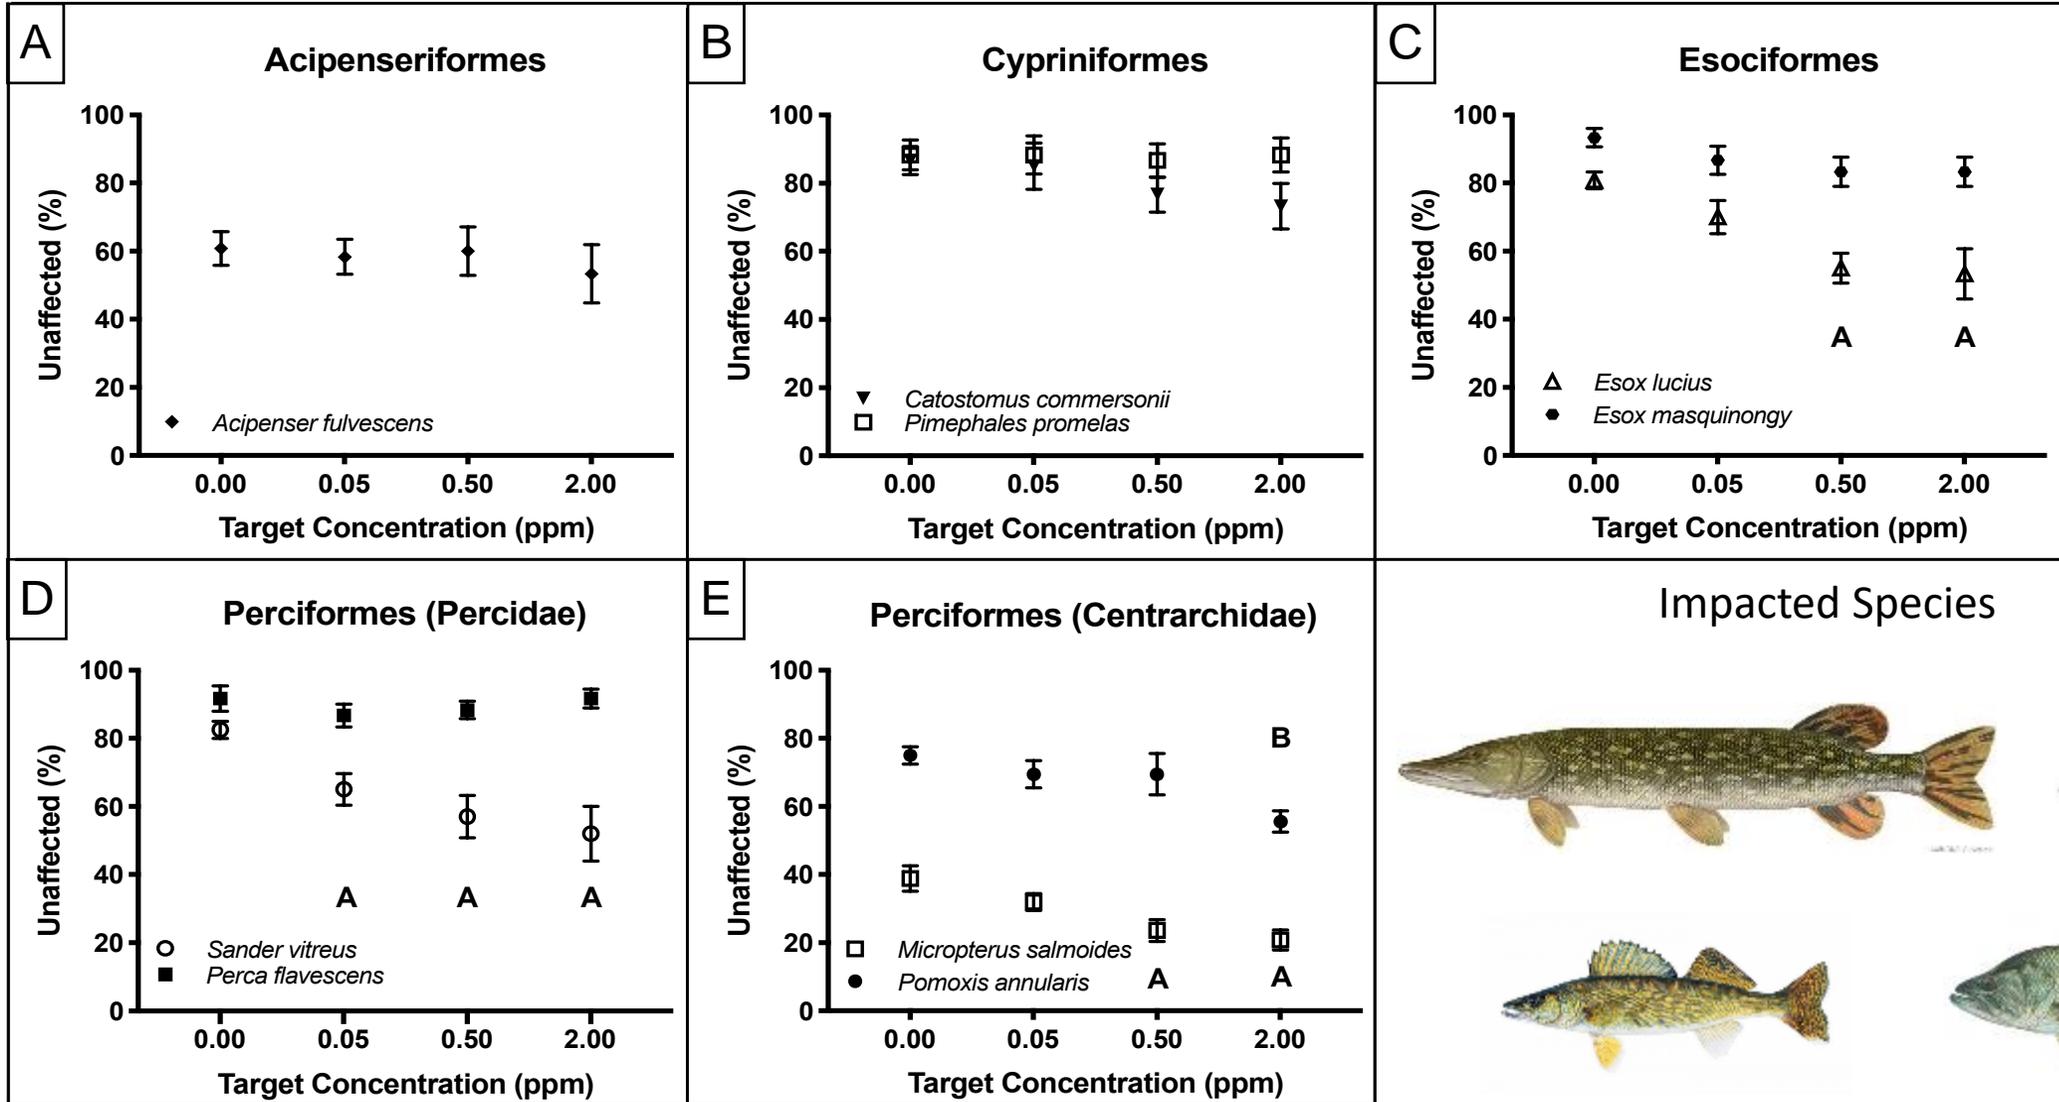

Curved Spin (Scoliosis)

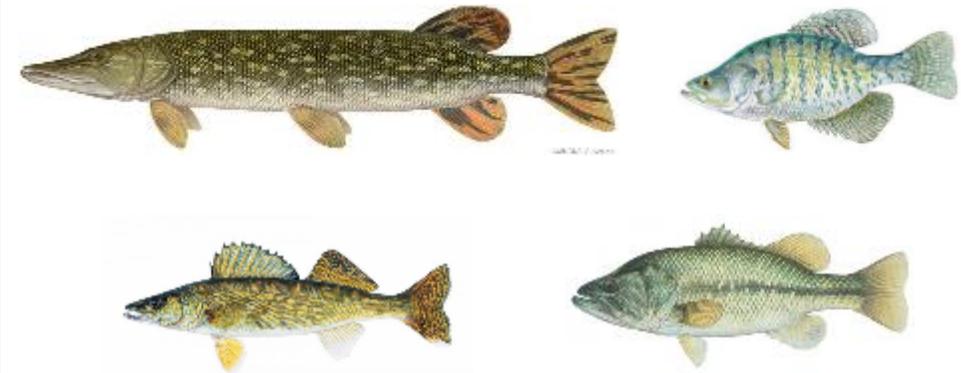

Cardiac Edema

Embryo Assays: 4 out of 9 species impacted

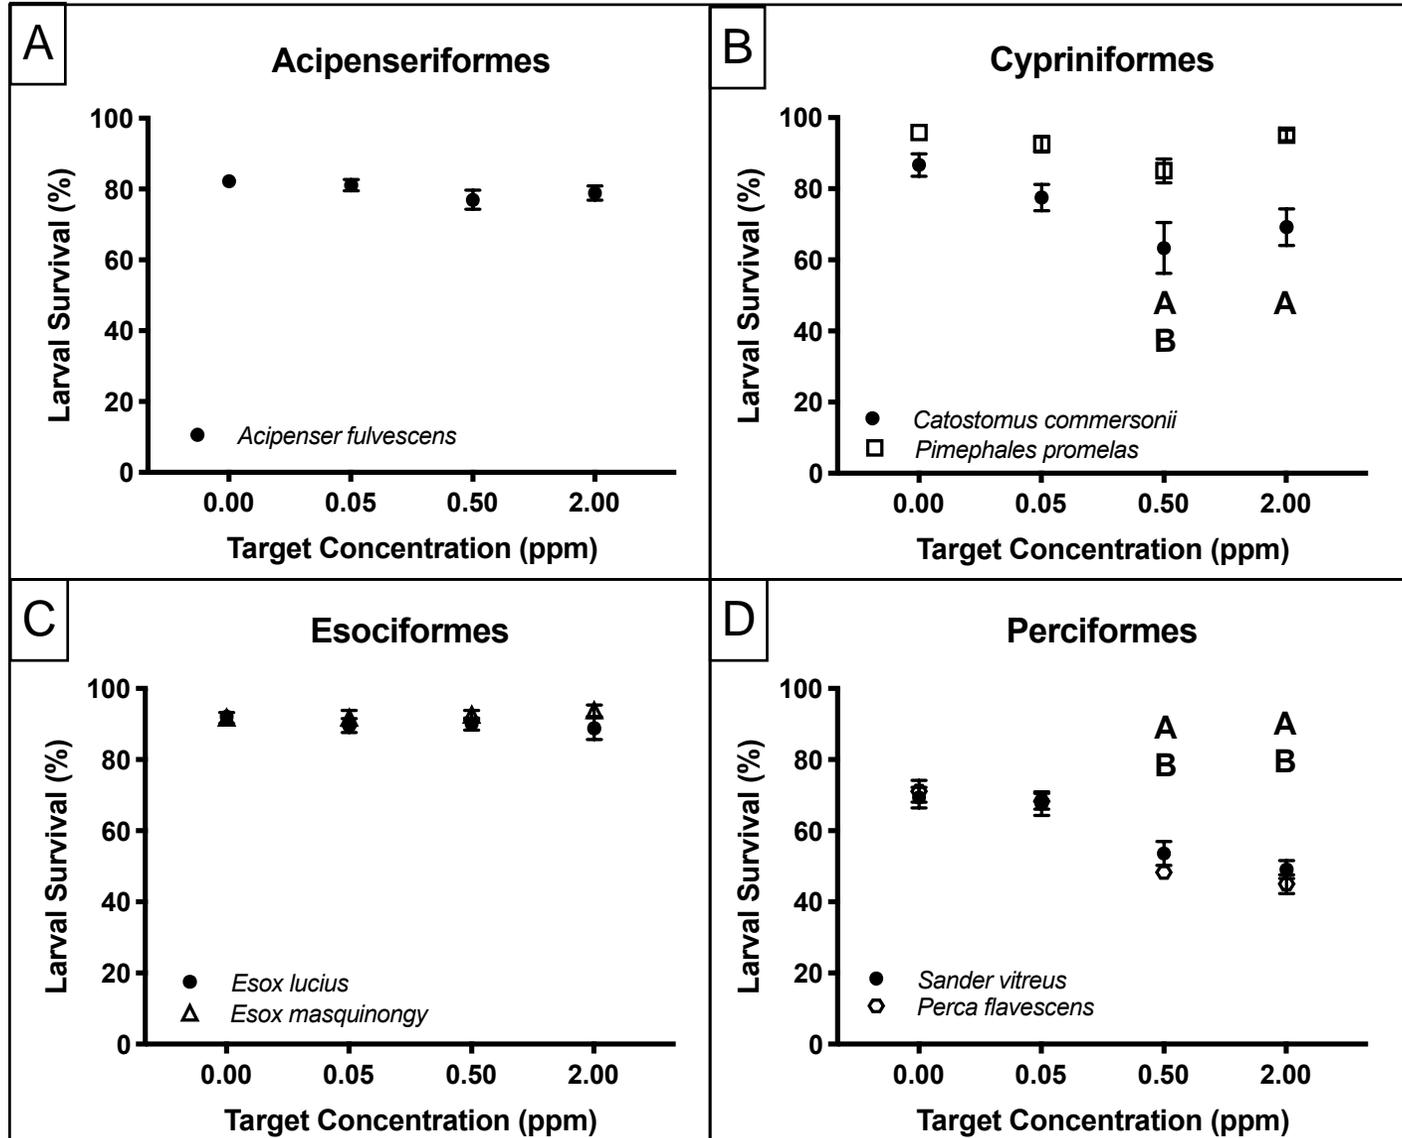

Impacted Species

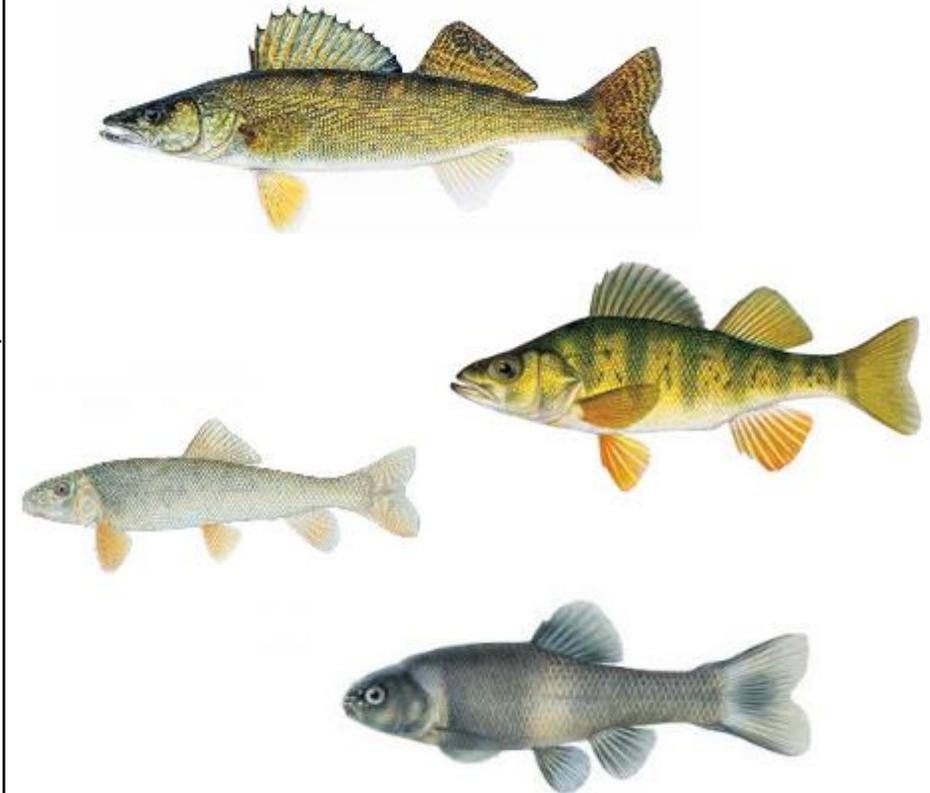

Larval Assays

- Exposure from hatch until 30 days post hatch
- Assess survivorship and growth
- 0.00 ppm (control), 0.05 ppm, 0.50 ppm, and 2.00 ppm 2,4-D

Larval Assays: 4 out of 7 species impacted

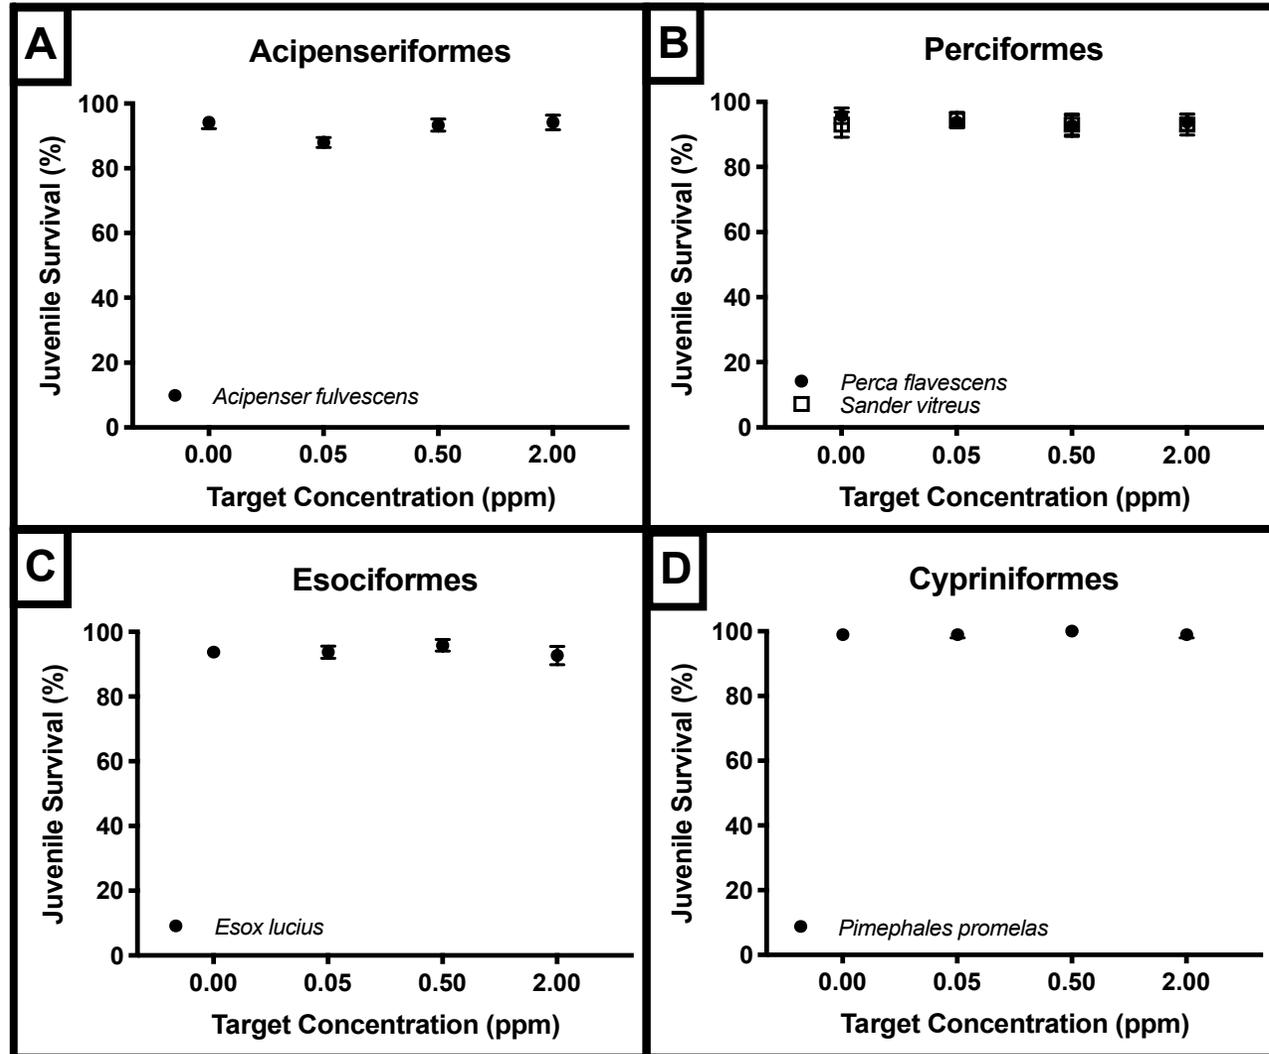

Impacted Species

Juvenile Assays

- Exposure from 60 days post until 150 days post hatch
- Assess survivorship and growth
- 0.00 ppm (control), 0.05 ppm, 0.50 ppm, and 2.00 ppm 2,4-D

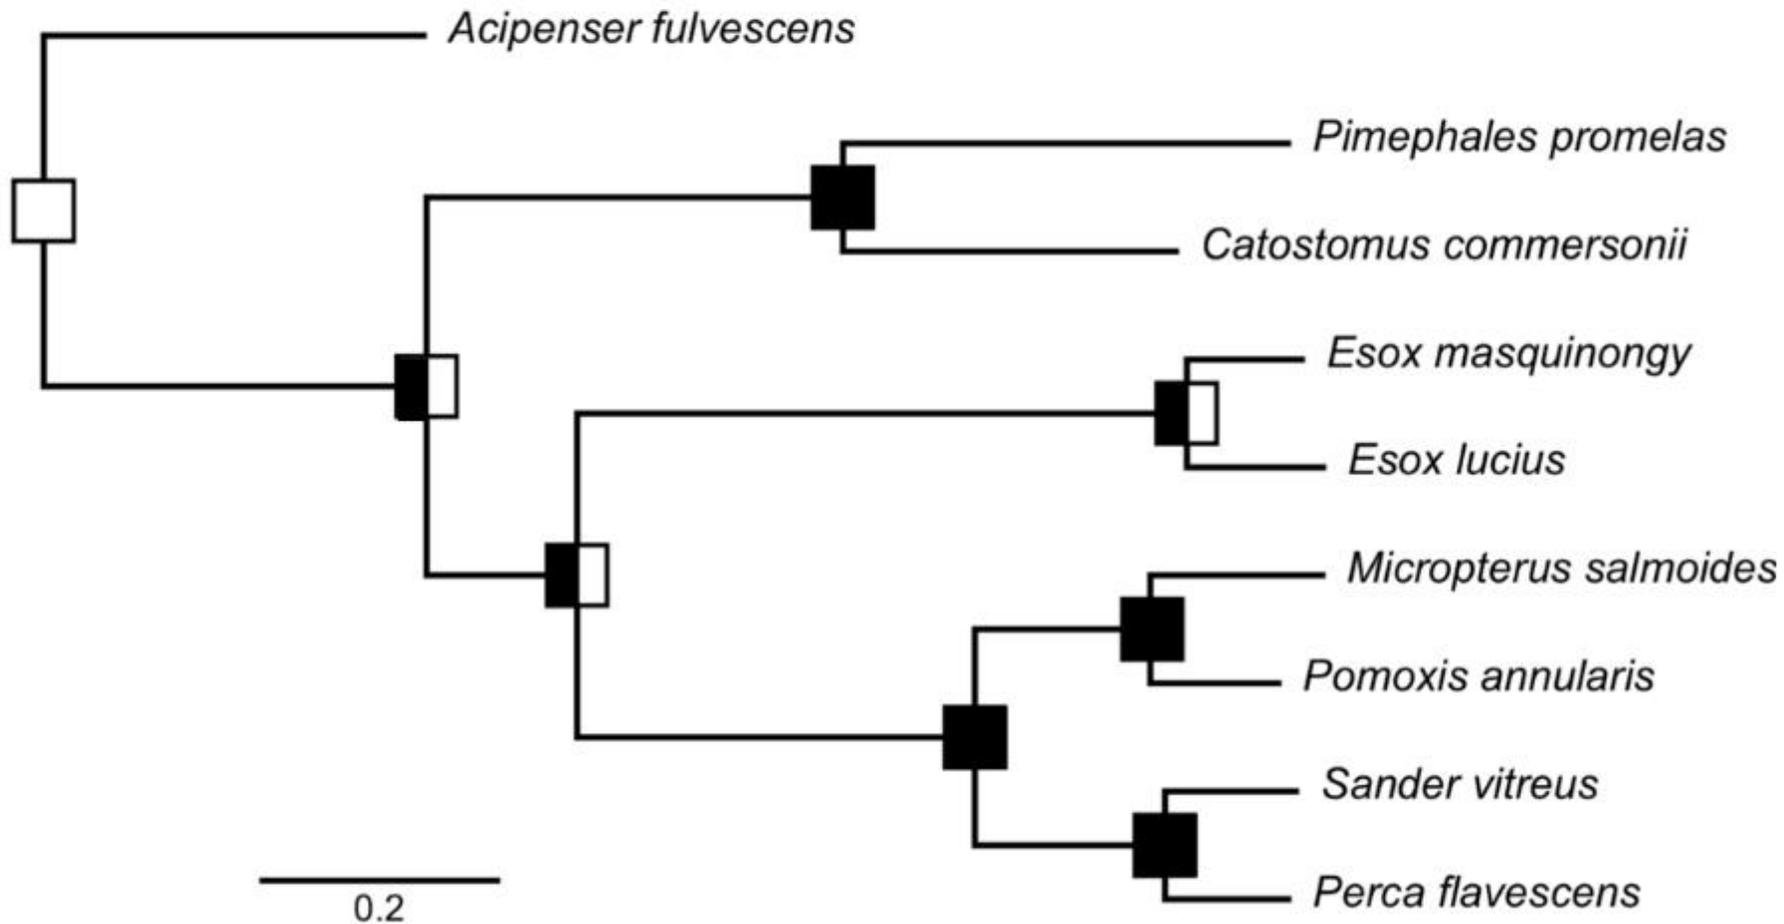

No observed impacts of 2,4-D exposure on juvenile fish

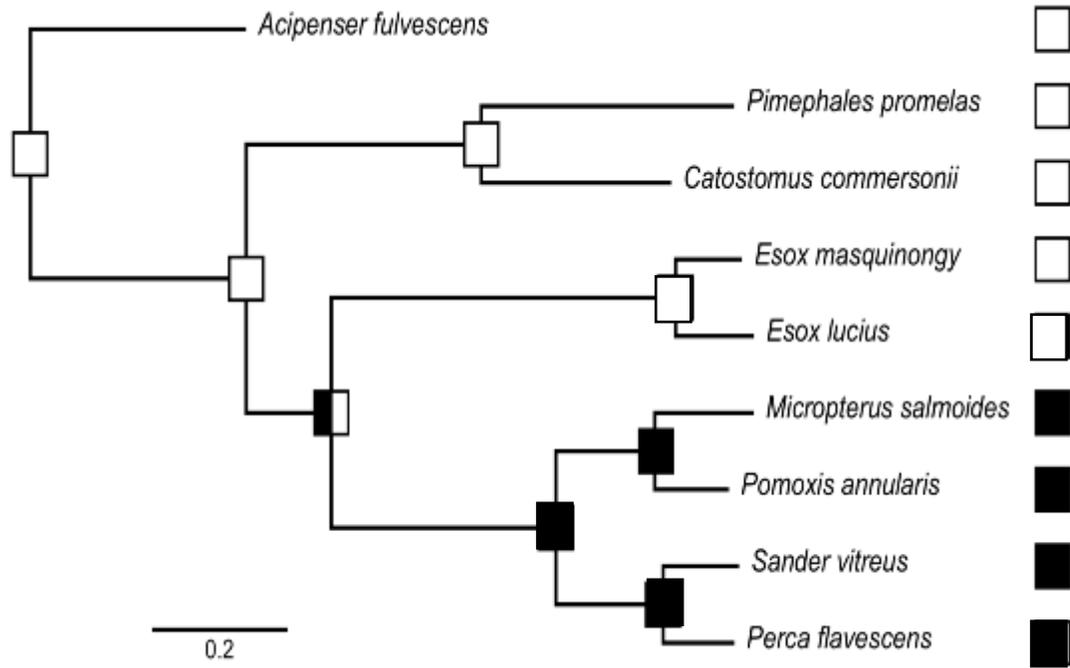

No Impacted Species

Is there a correlation with sensitivity to 2,4-D exposure and phylogenetic distances

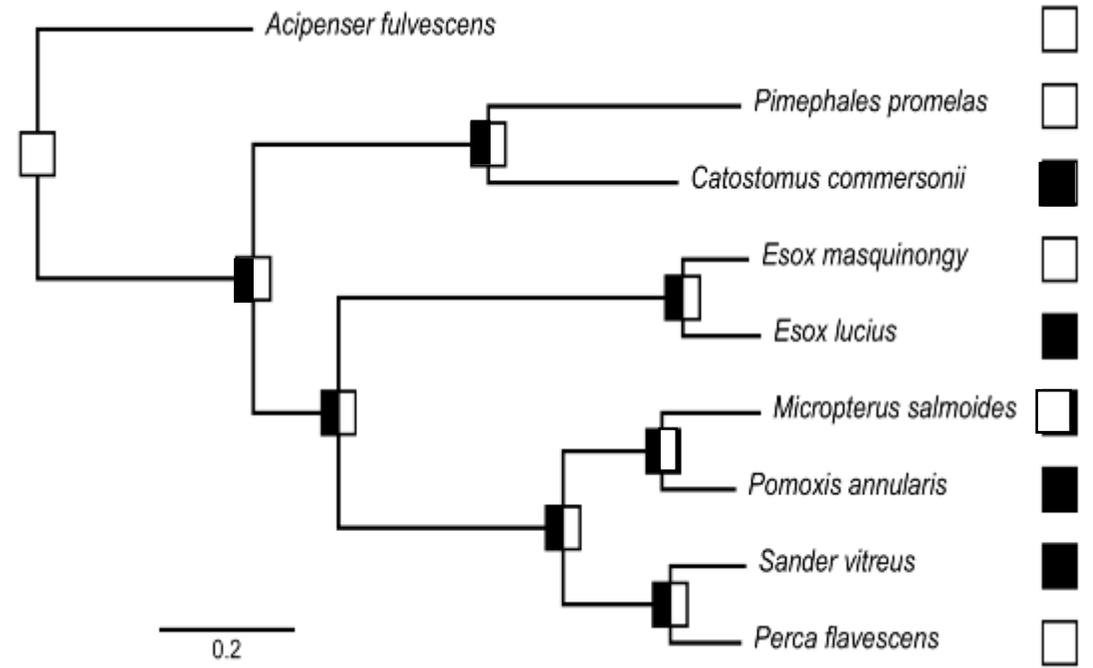

Bayesian Inference Tree

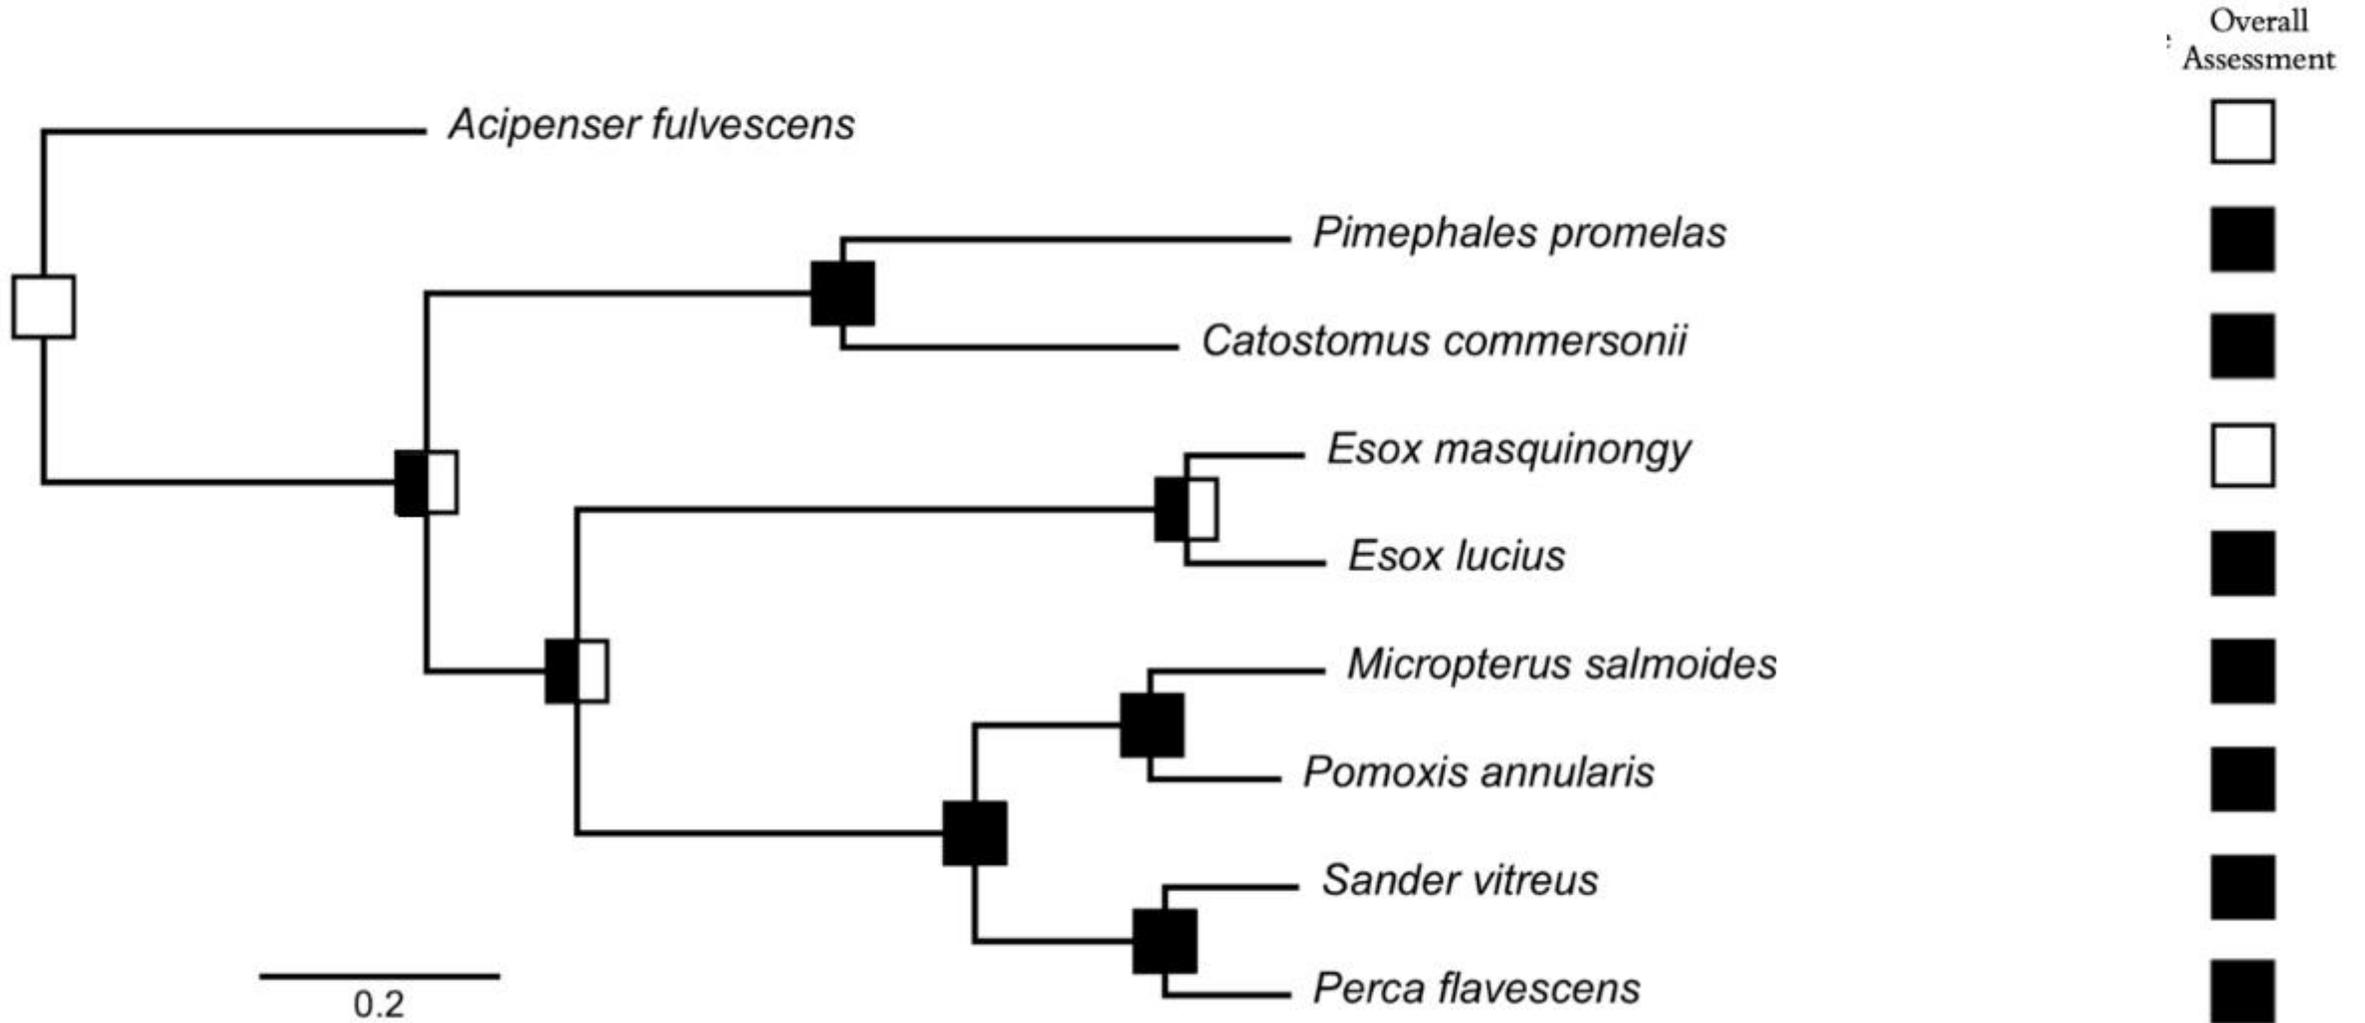

Strong Phylogenetic Prediction

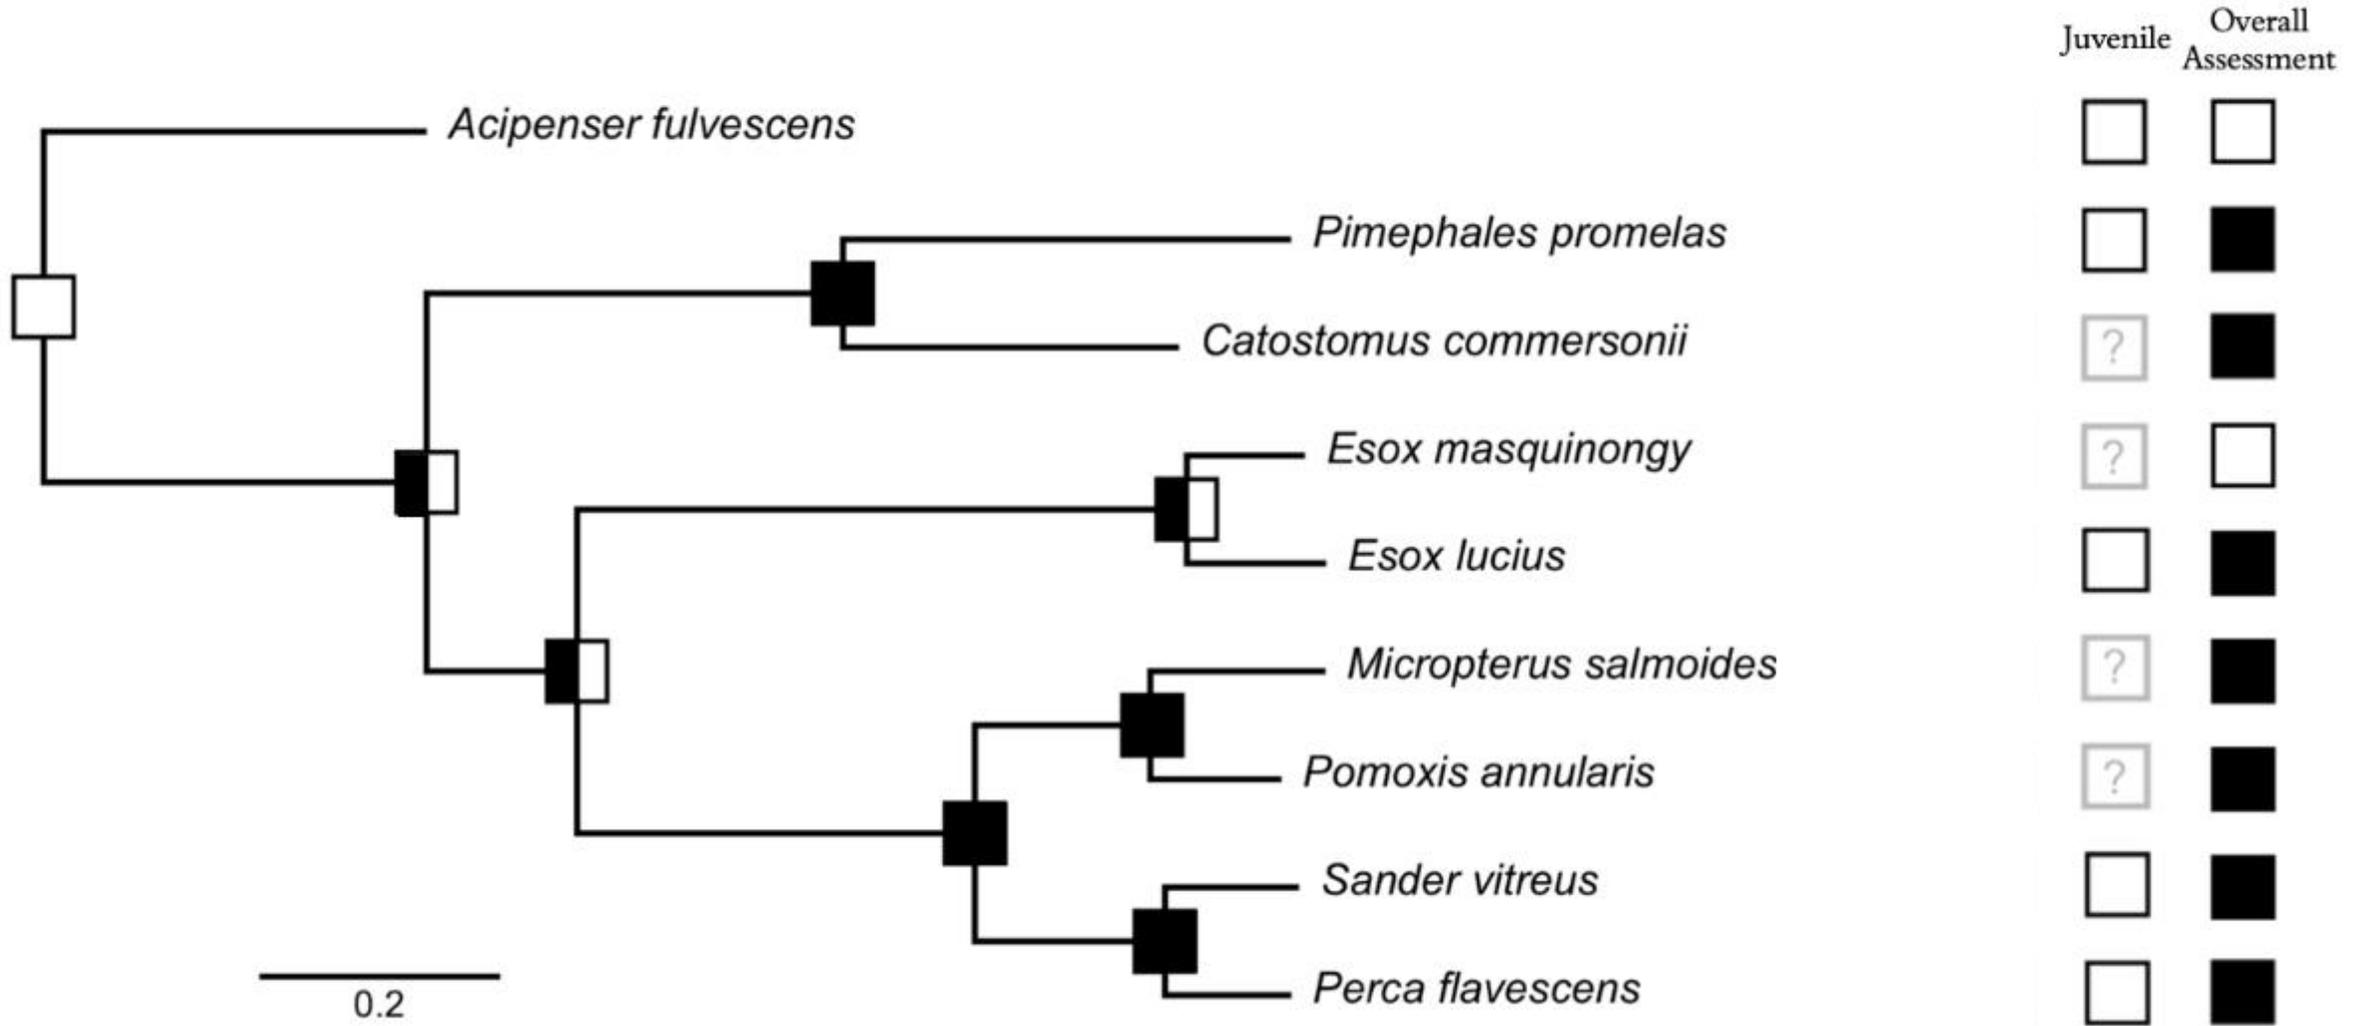

No/Weak Phylogenetic Prediction

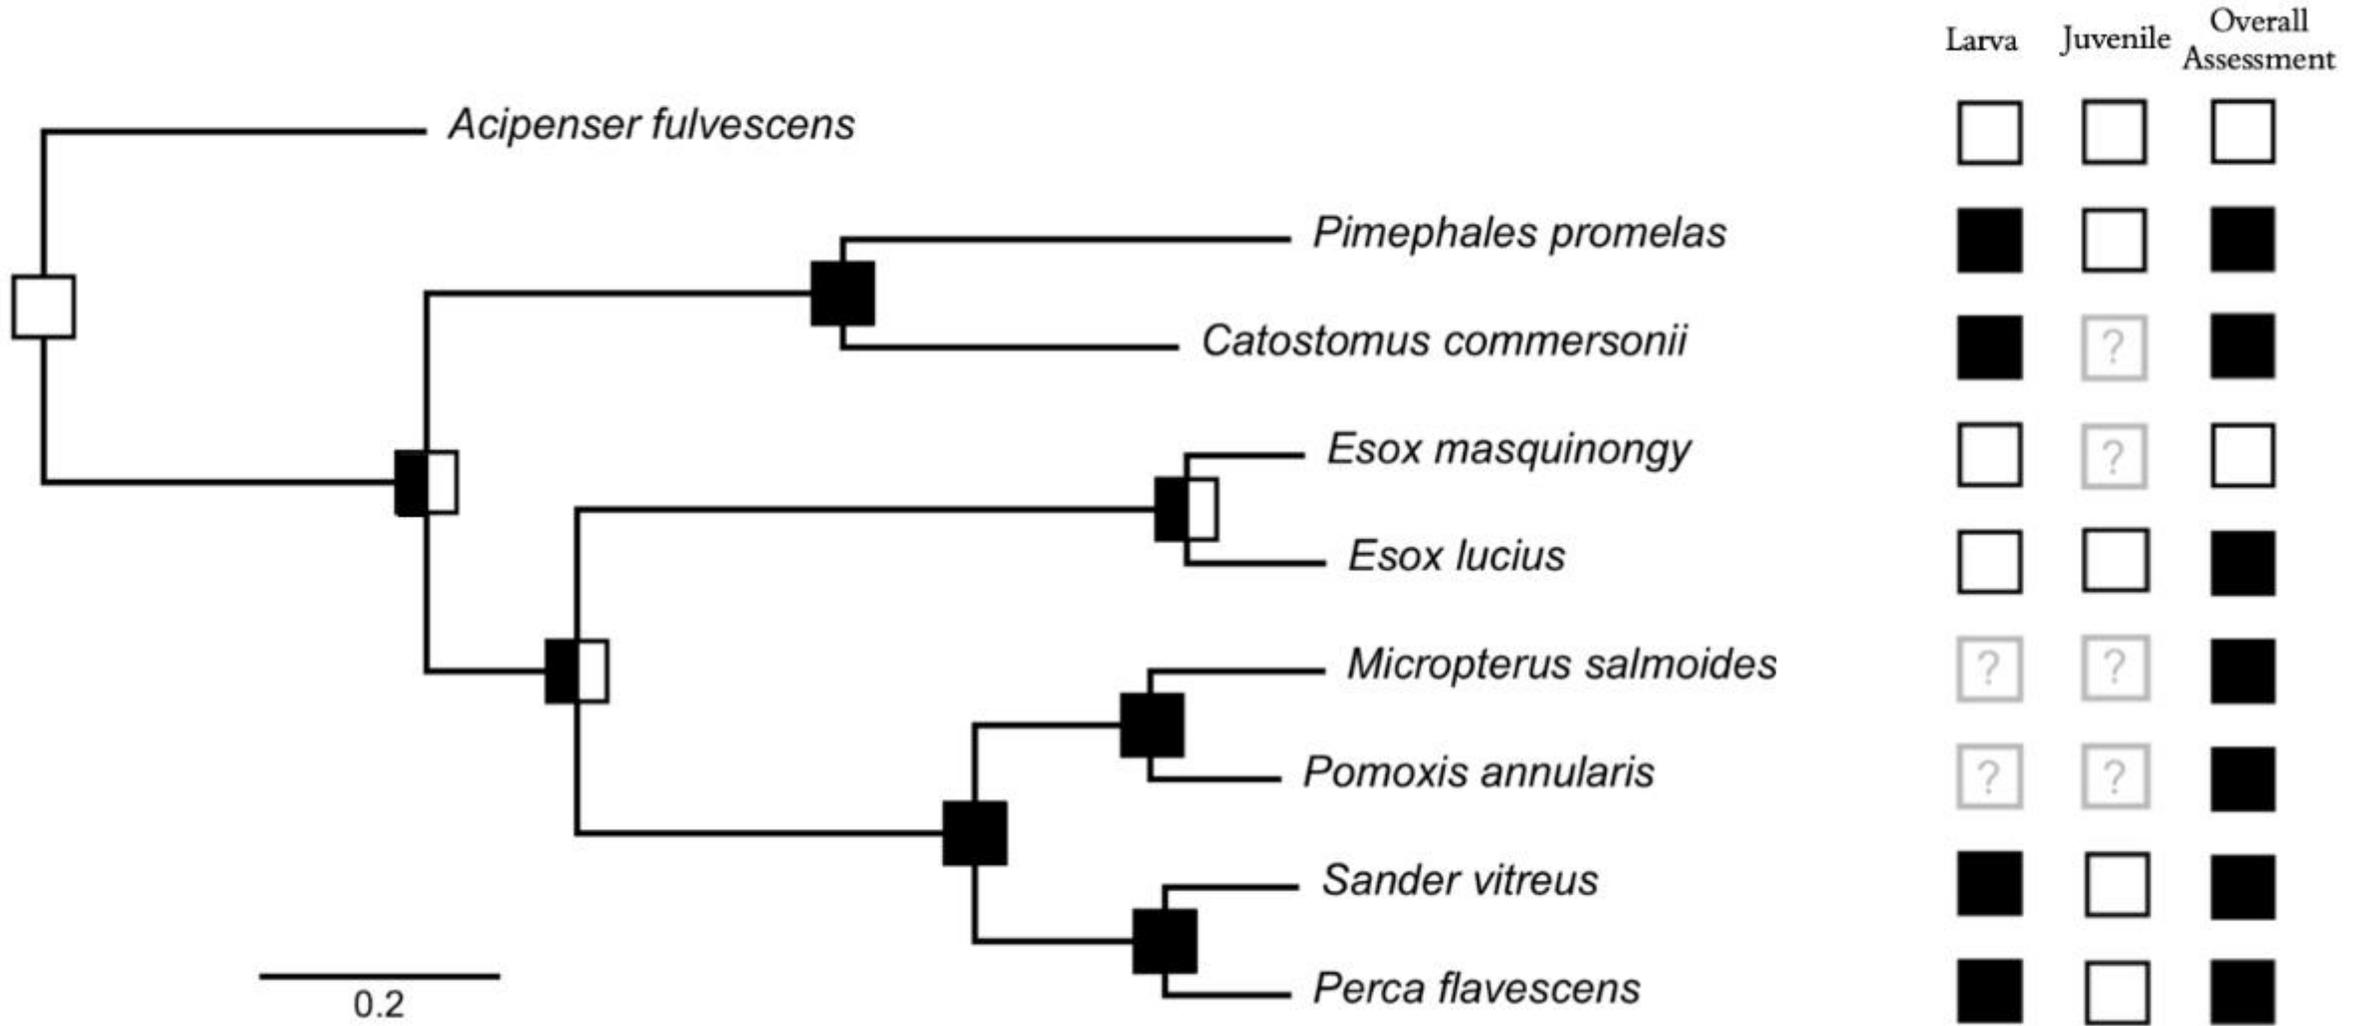

No correlation between sensitivity to 2,4-D exposure and phylogenetic proximity

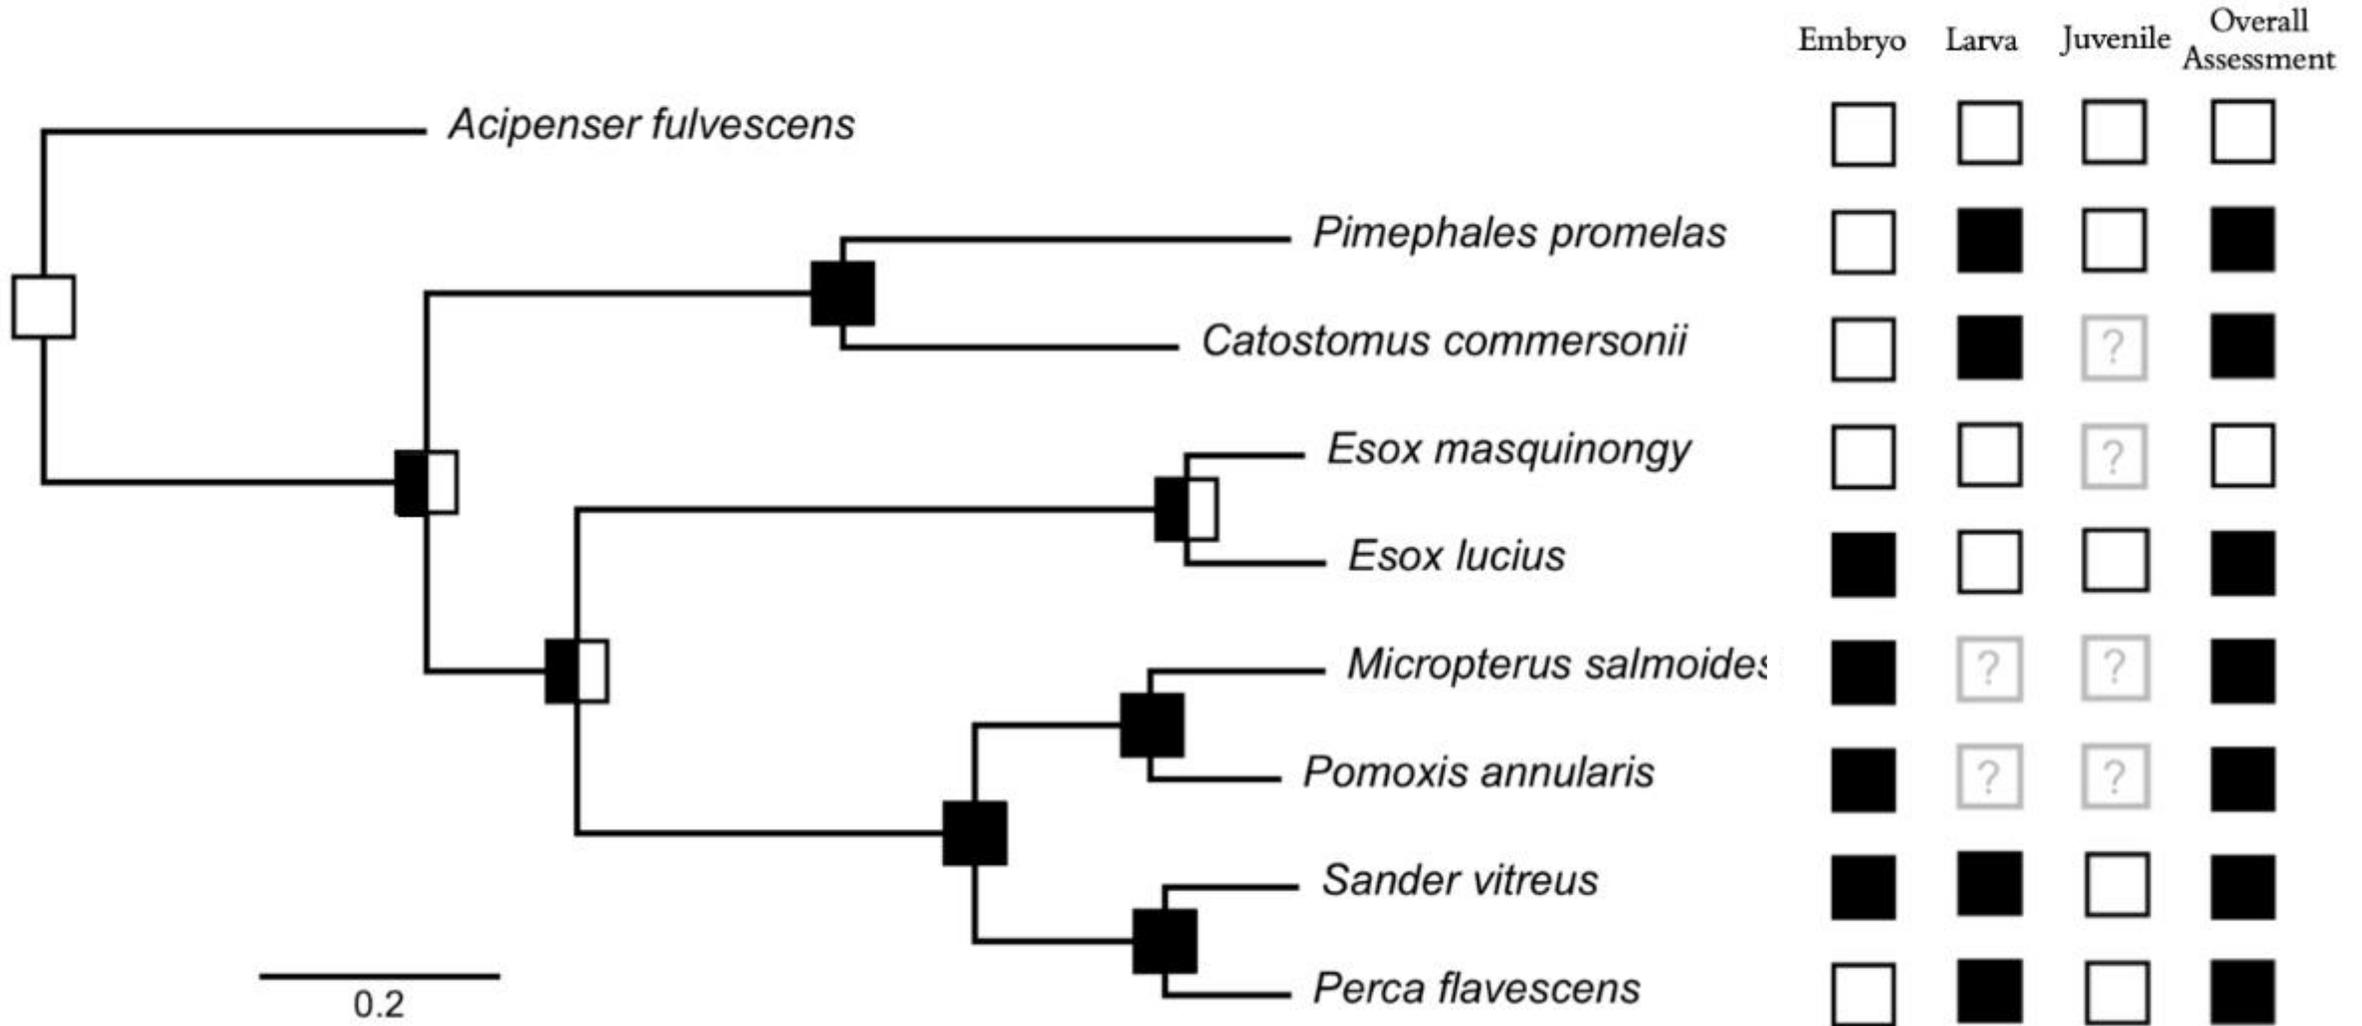

No correlation between sensitivity to 2,4-D exposure and phylogenetic proximity

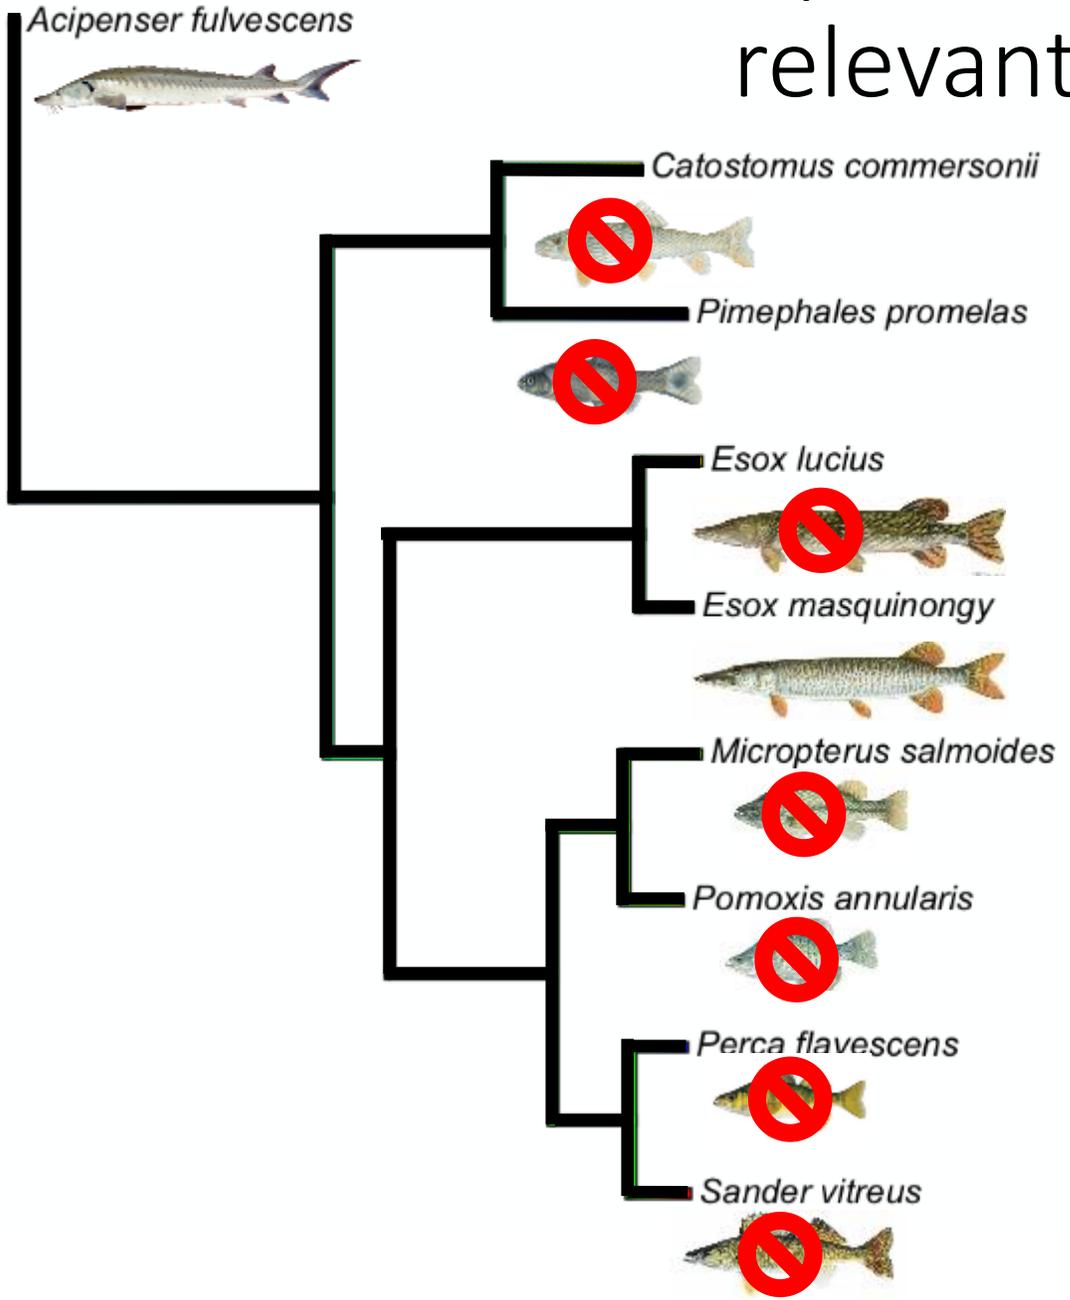

No correlation between sensitivity to 2,4-D exposure and phylogenetic proximity

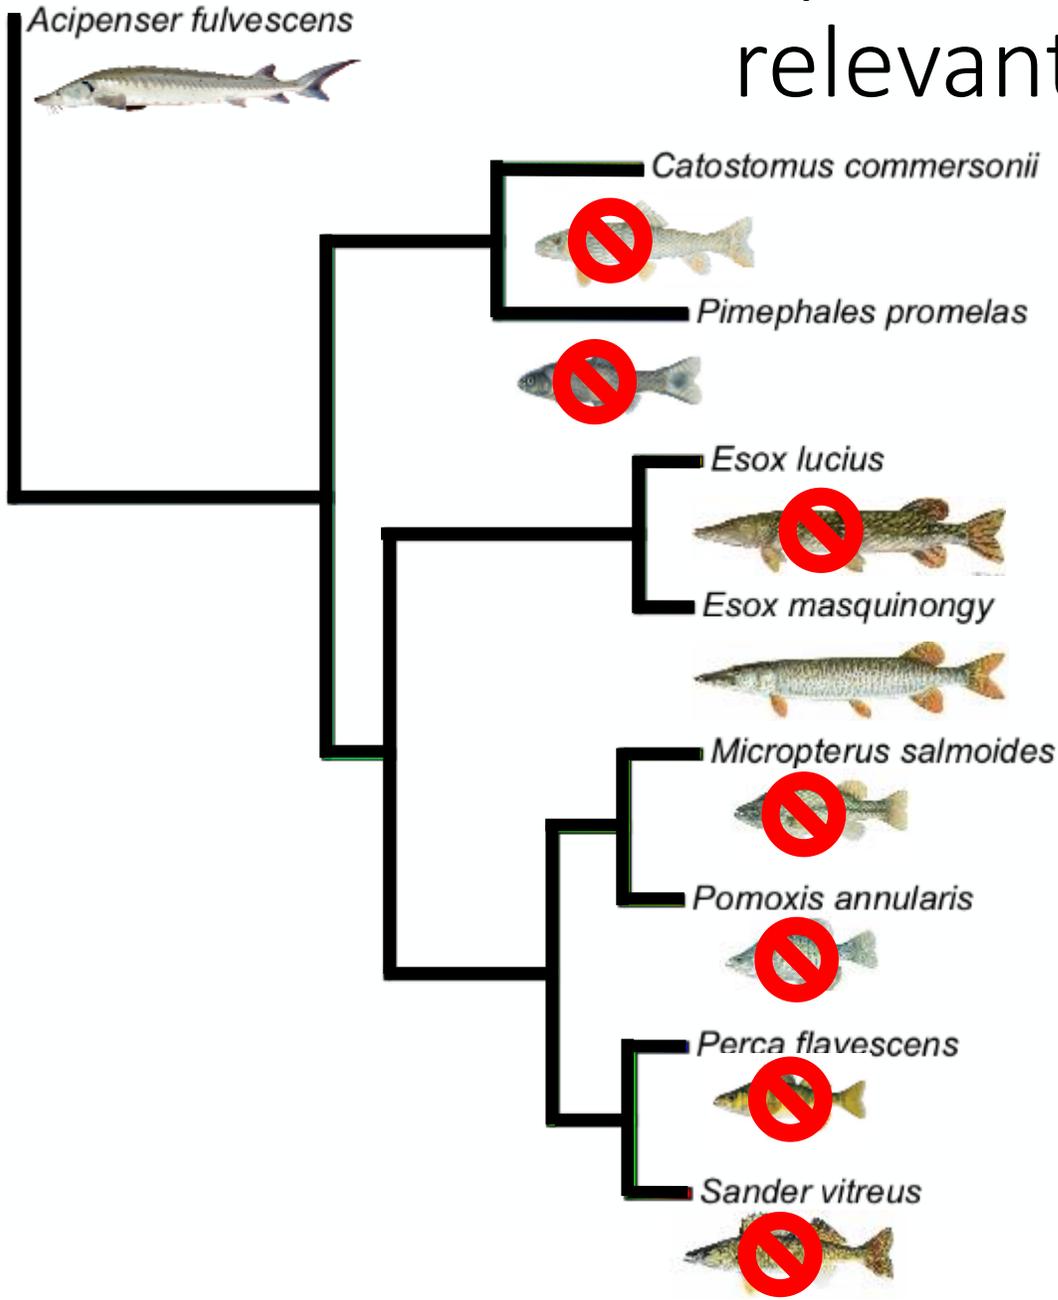

No correlation between sensitivity to 2,4-D exposure and phylogenetic proximity

Most species impacted by environmentally relevant concentrations of 2,4-D

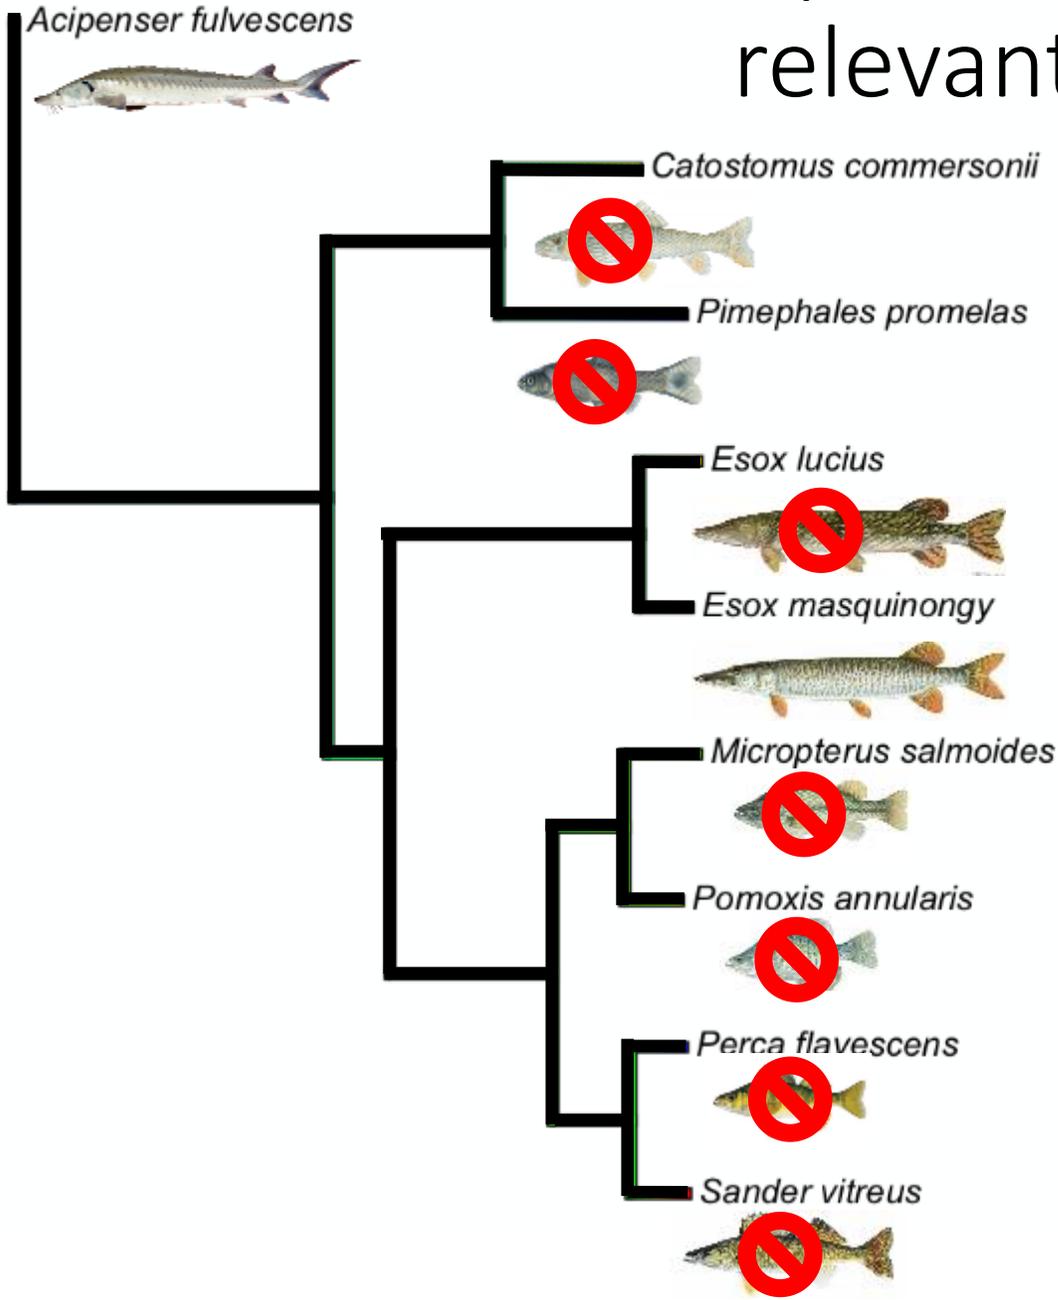

Most species impacted by environmentally relevant concentrations of 2,4-D

Impacted Species

- 7 out of 9 species

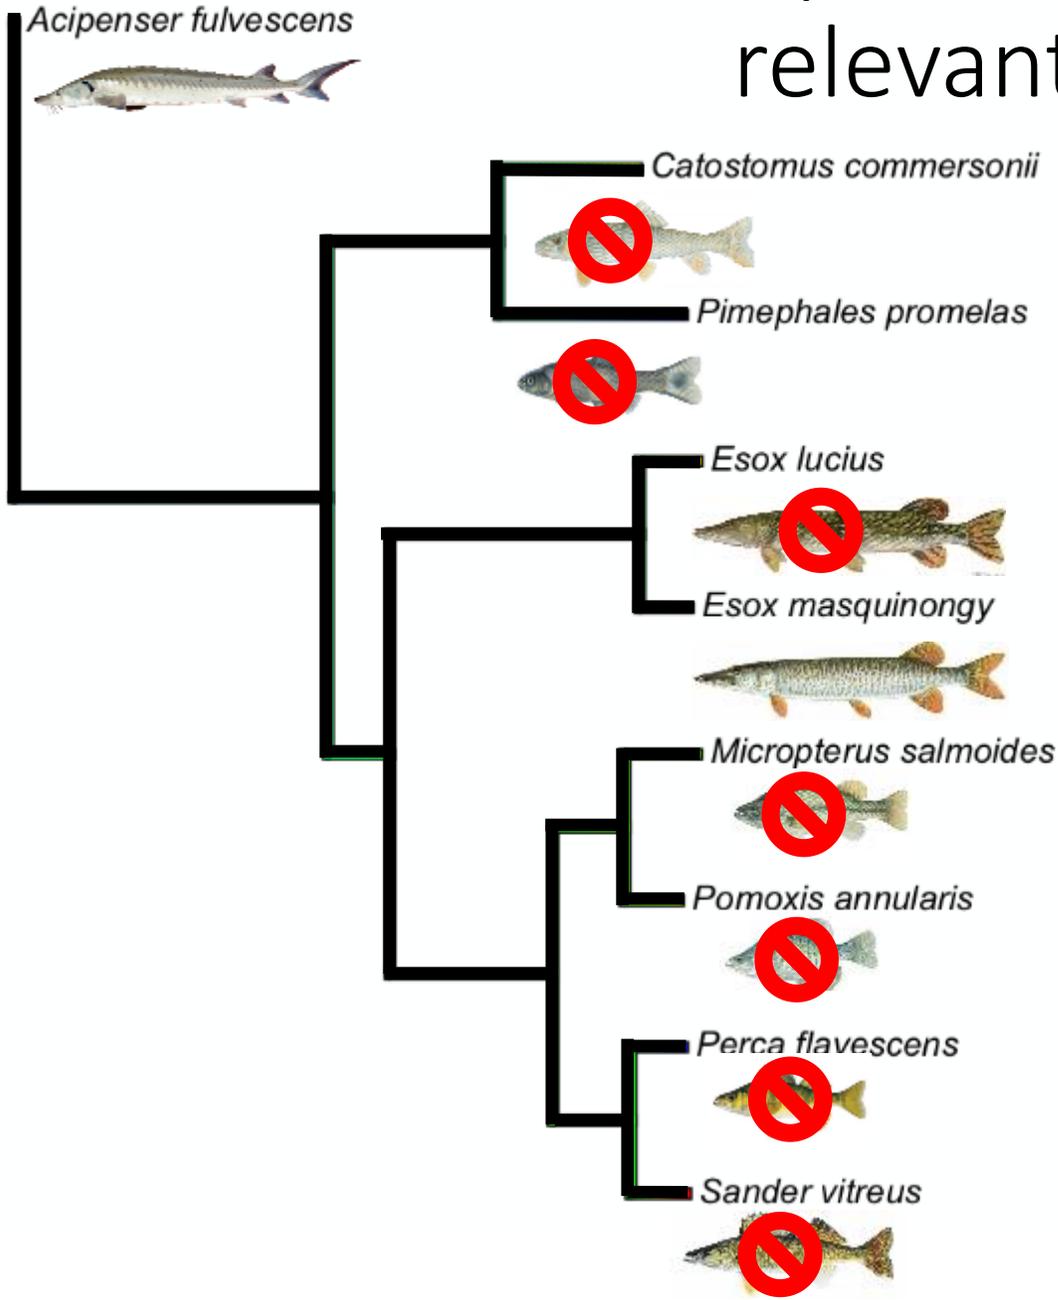

Most species impacted by environmentally relevant concentrations of 2,4-D

Impacted Species

- 7 out of 9 species
- 5 out of 6 families

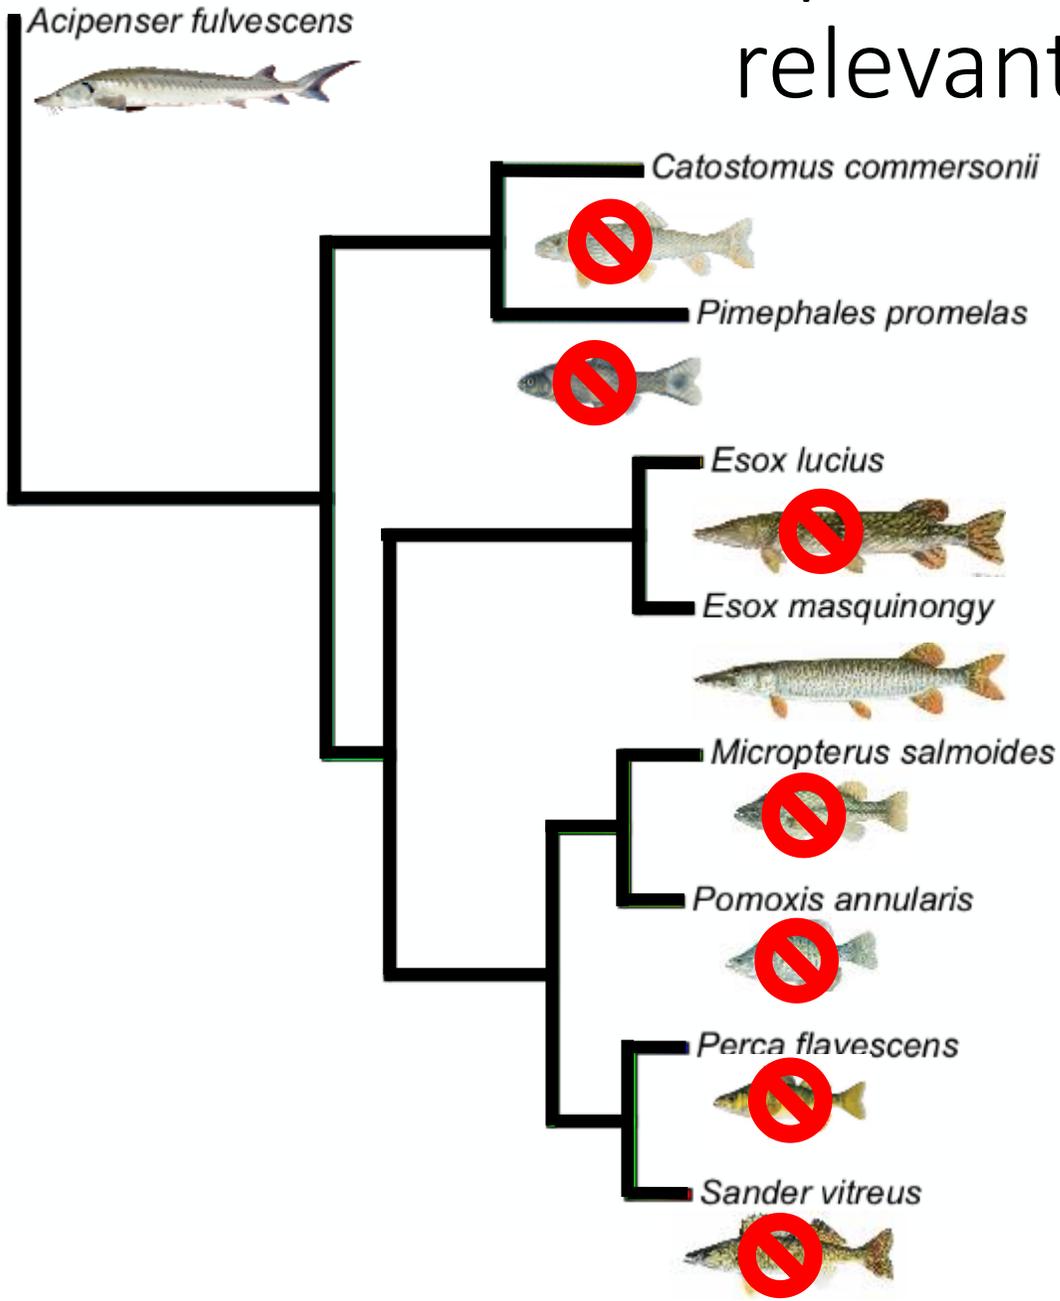

Most species impacted by environmentally relevant concentrations of 2,4-D

Impacted Species

- 7 out of 9 species
- 5 out of 6 families
- 3 out of 4 orders

Most species impacted by environmentally relevant concentrations of 2,4-D

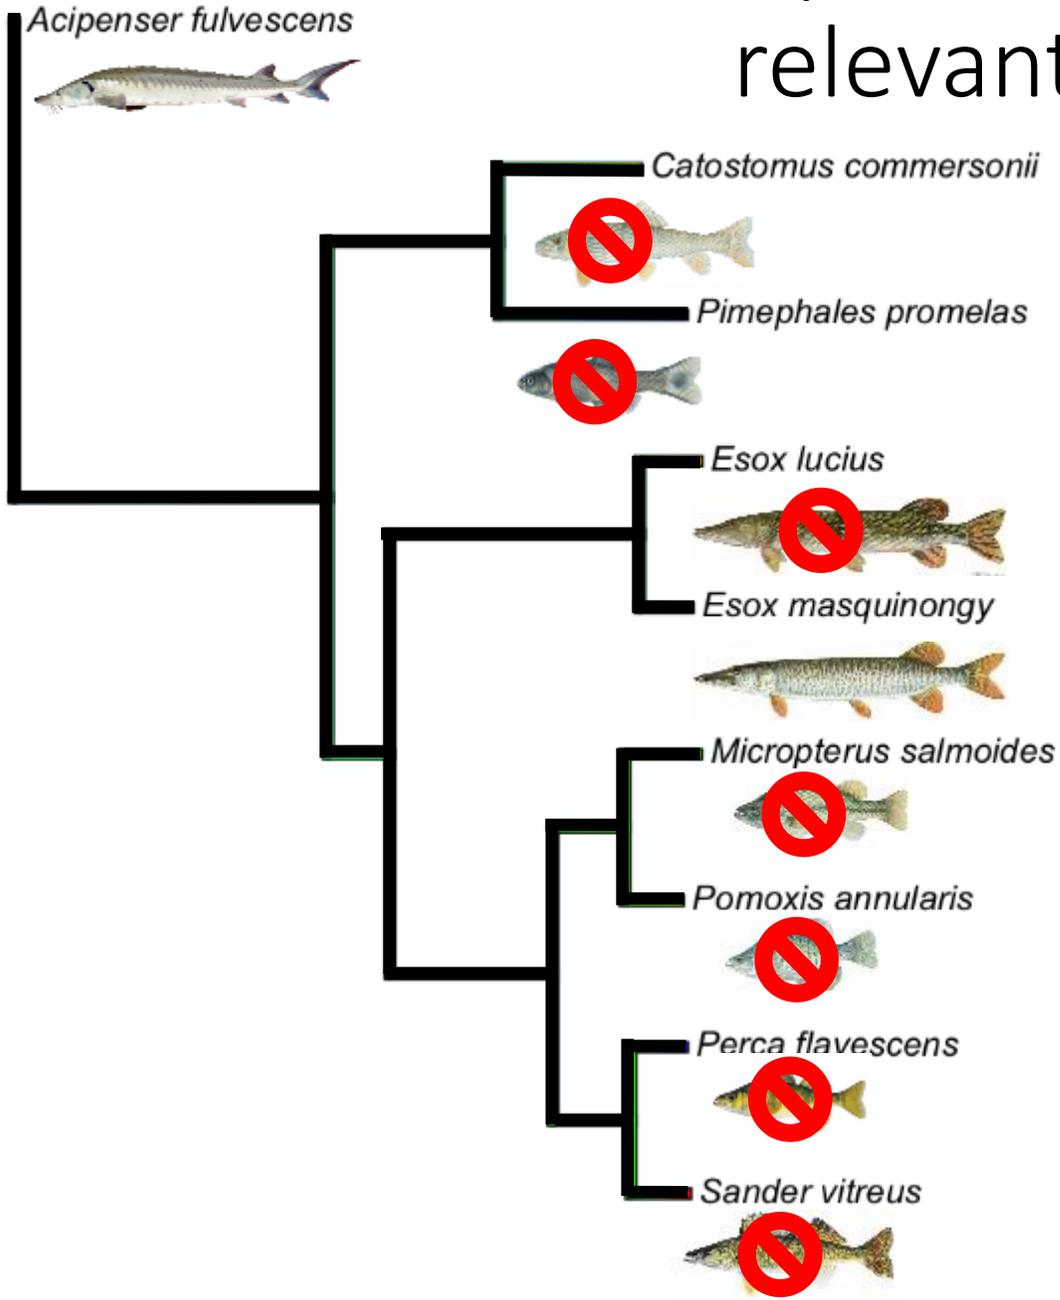

Impacted Species

- 7 out of 9 species
- 5 out of 6 families
- 3 out of 4 orders

Developmental Stage

- Early life stages most sensitive
- Juvenile not sensitive

Most species impacted by environmentally relevant concentrations of 2,4-D

Impacted Species

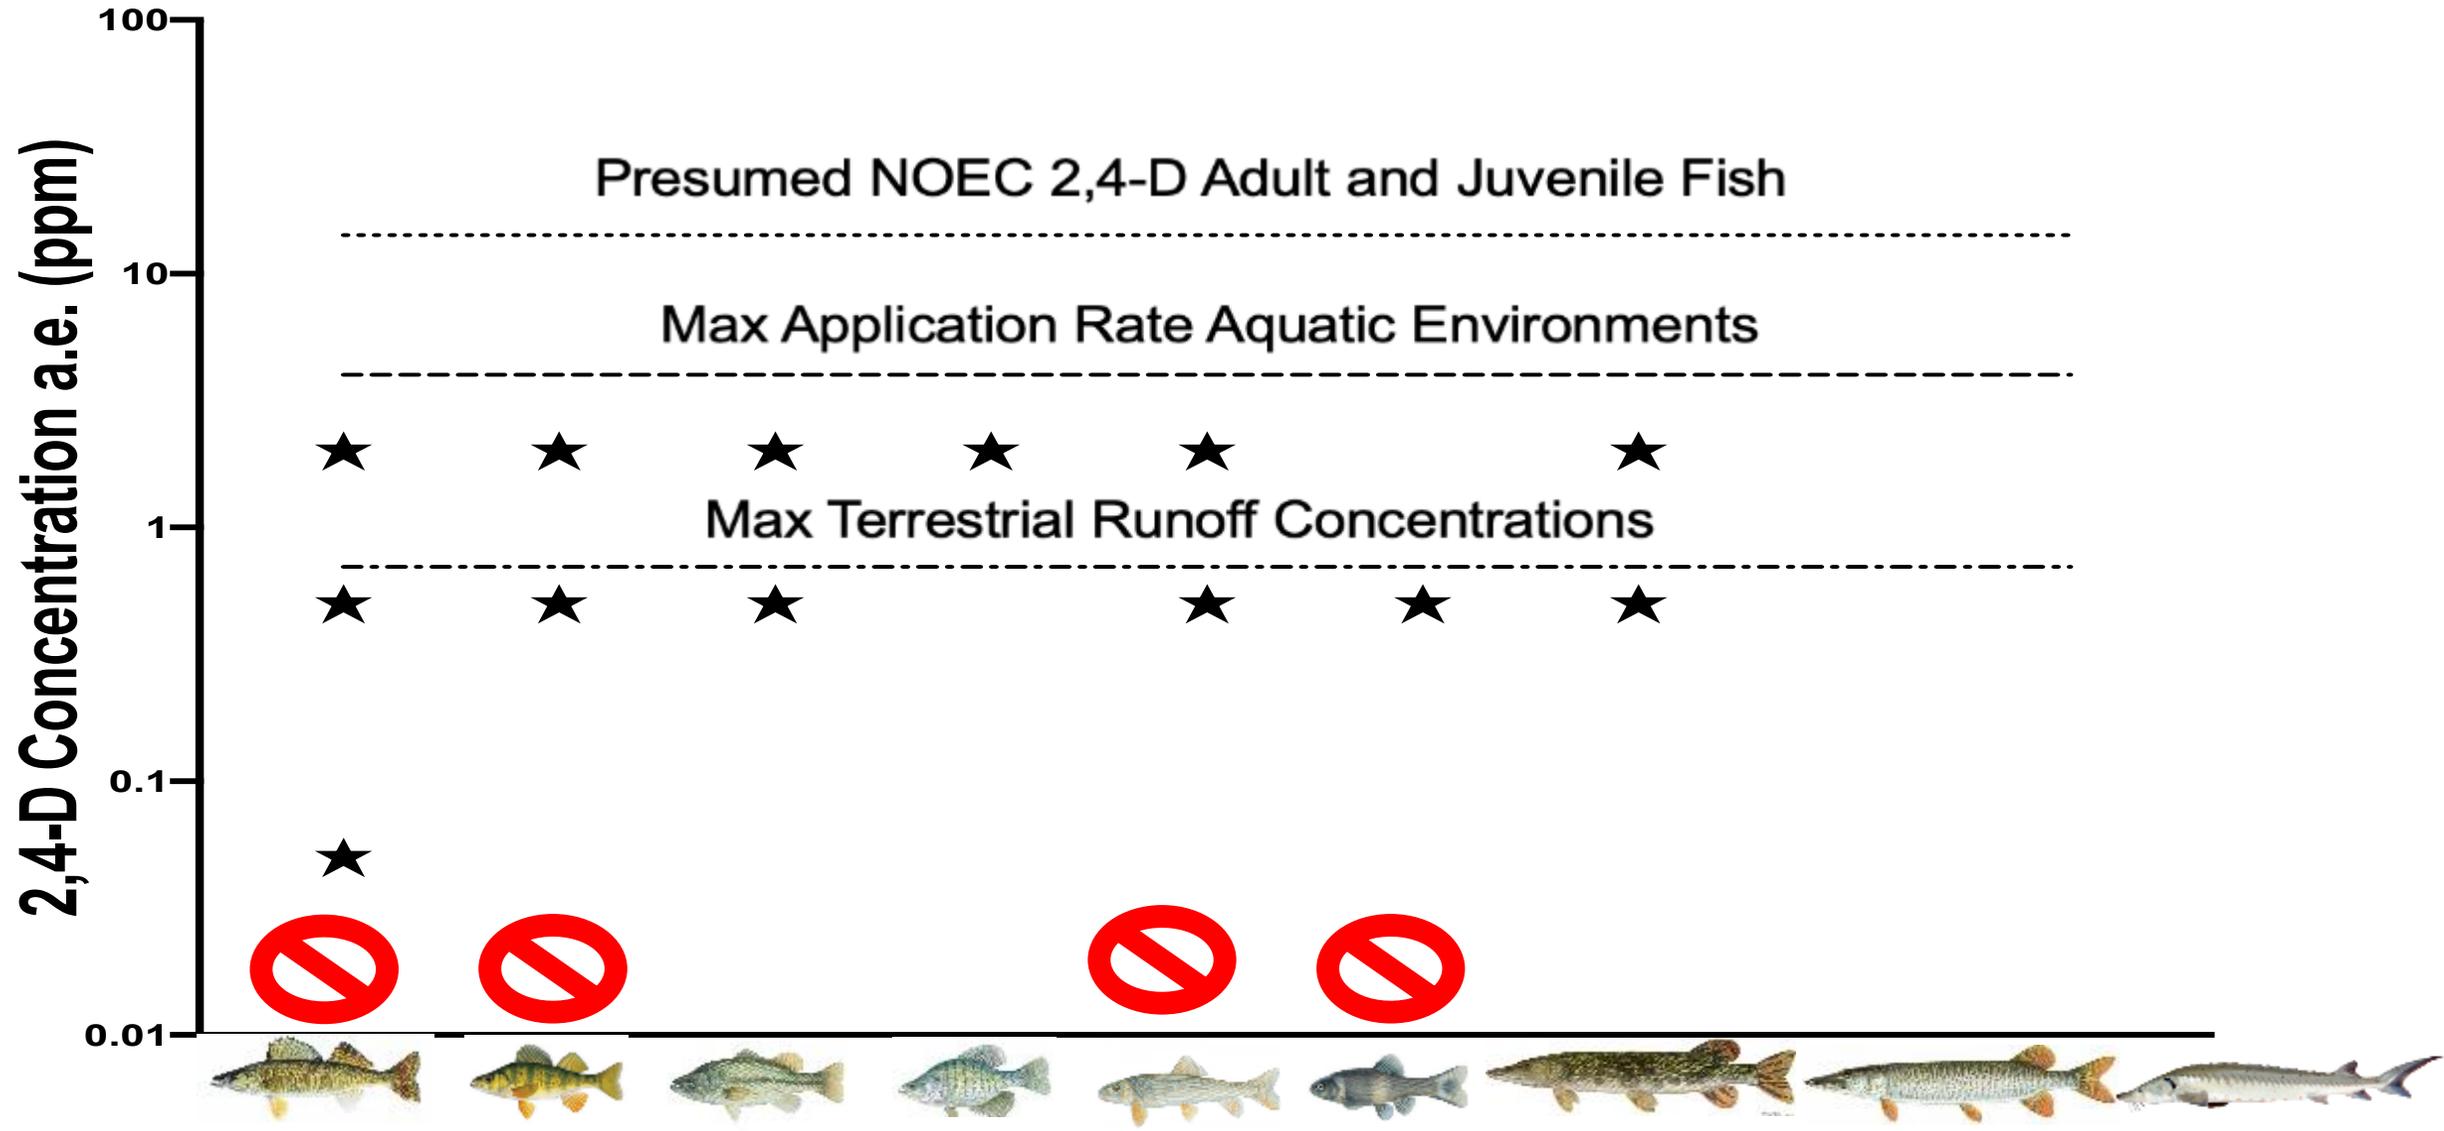

- 7 out of 9 species (8 out of 10)
- 5 out of 6 families
- 3 out of 4 orders

Developmental Stage

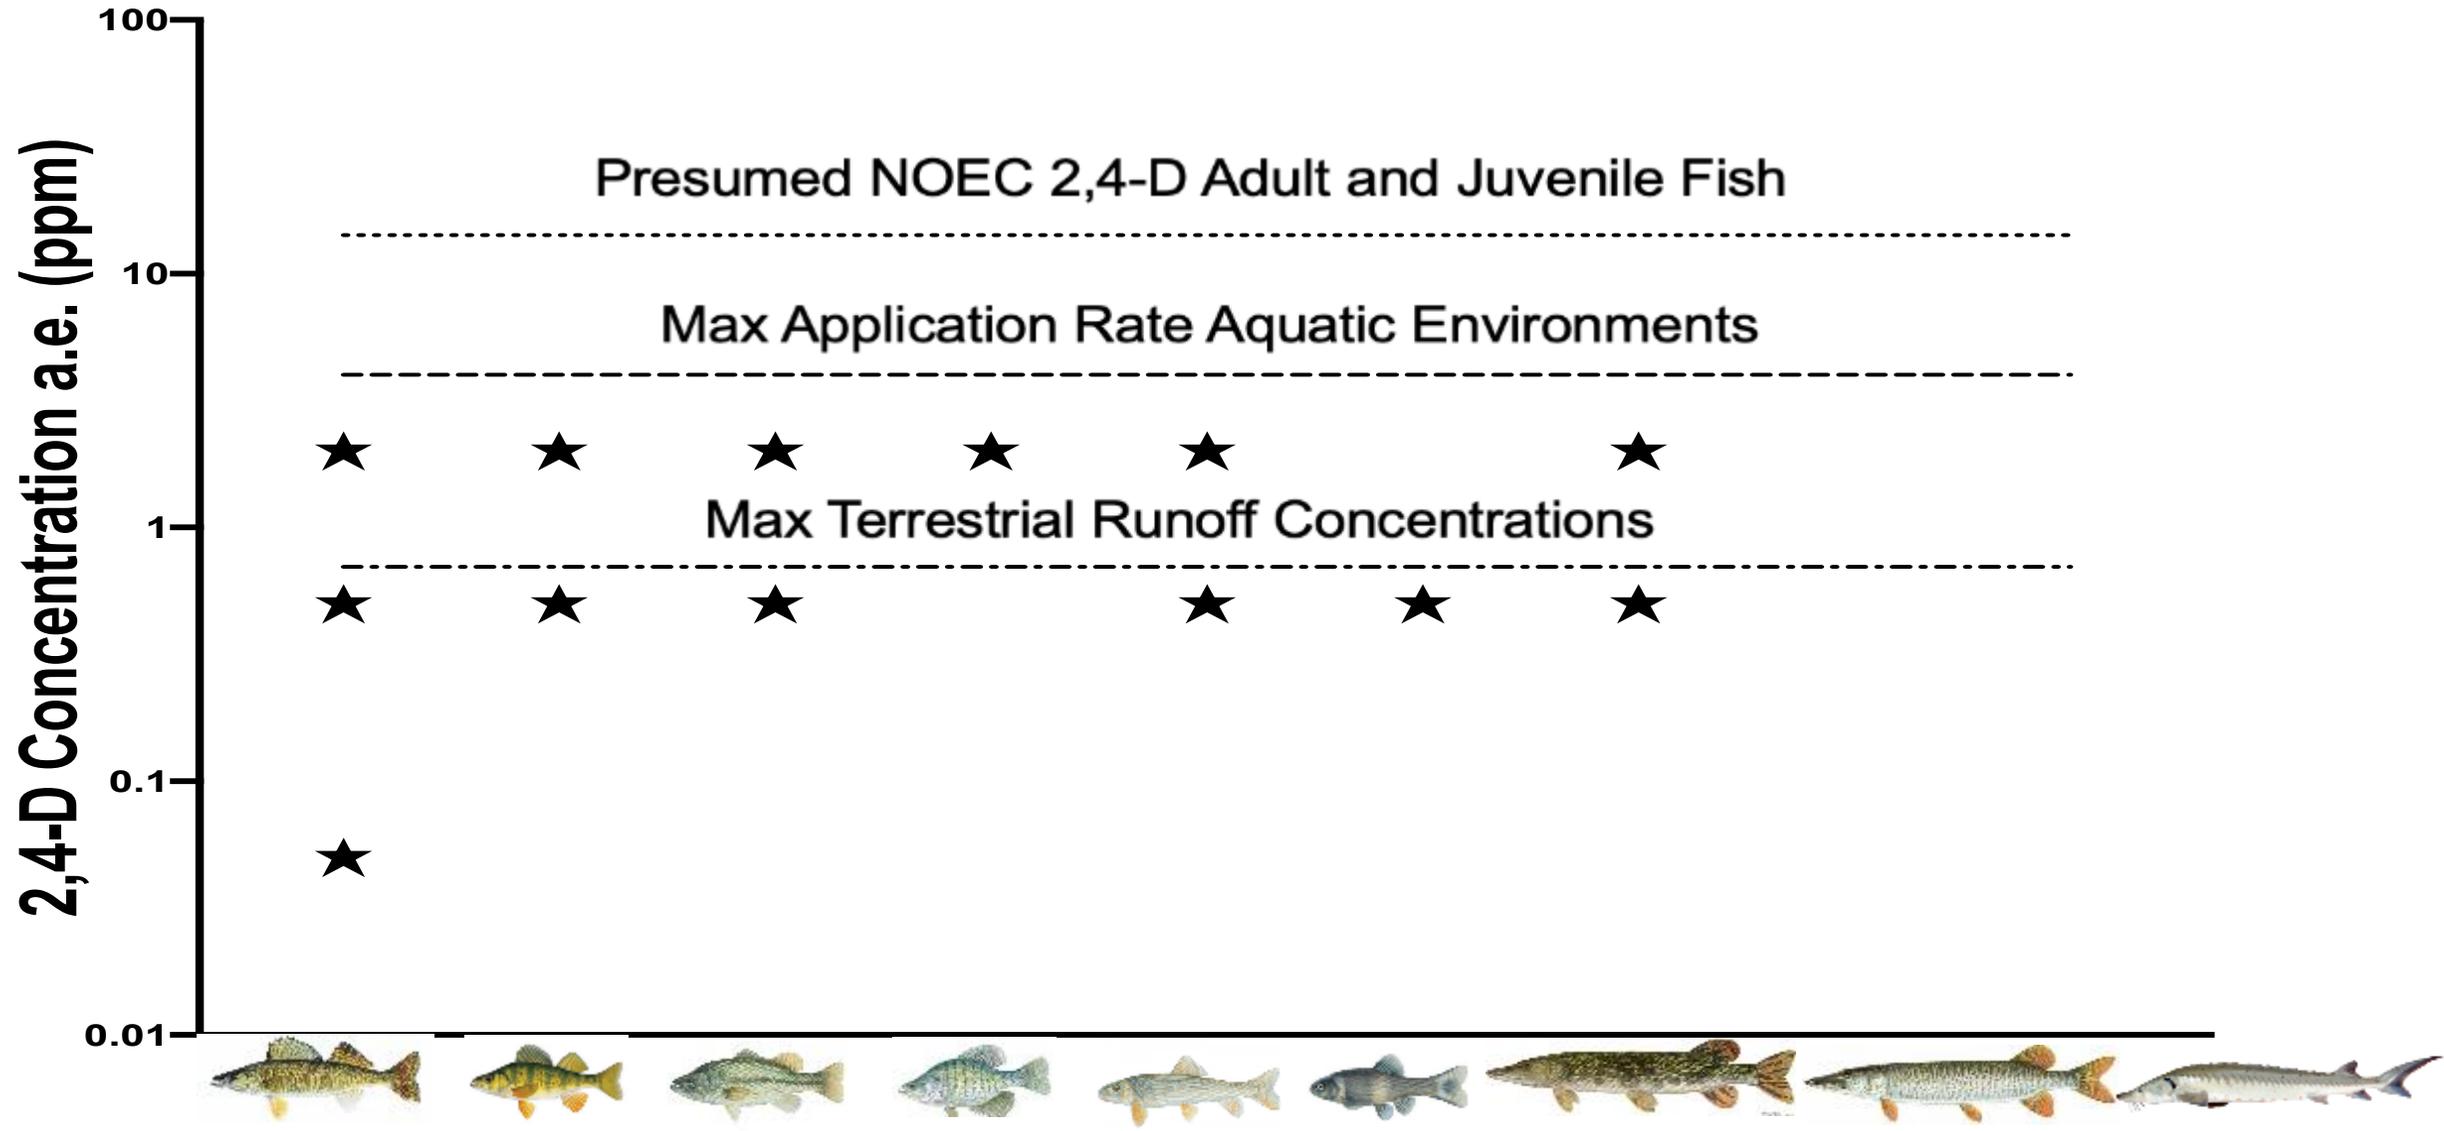

- Early life stages most sensitive
- Juveniles (adults) not sensitive

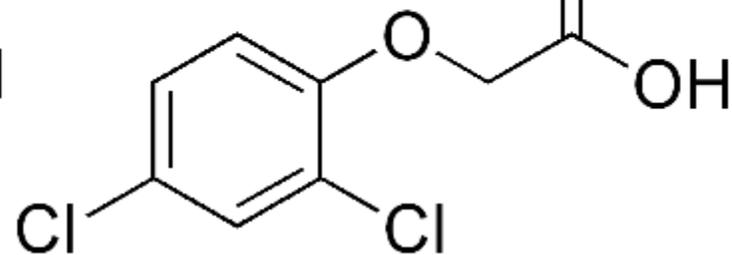

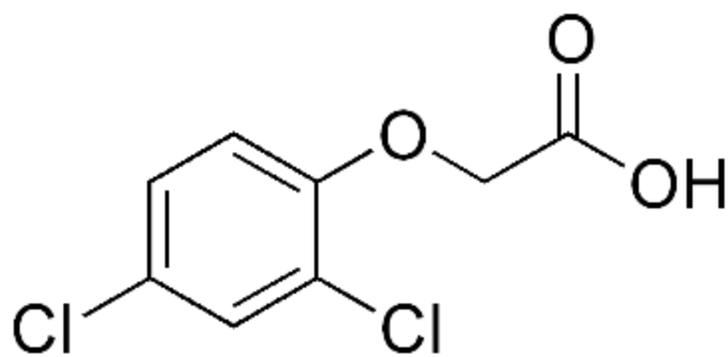

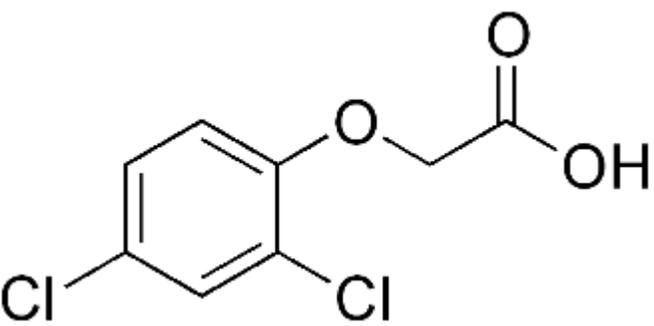

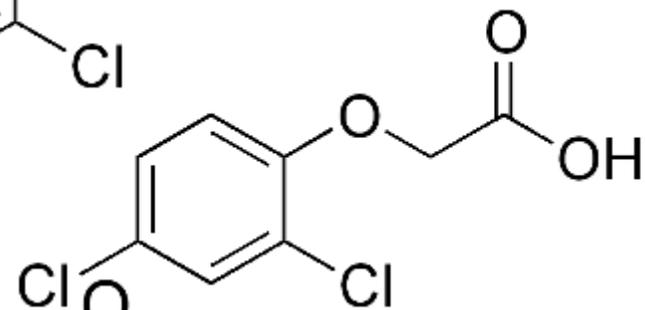

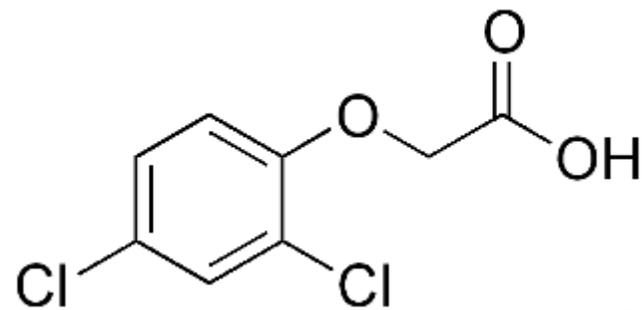

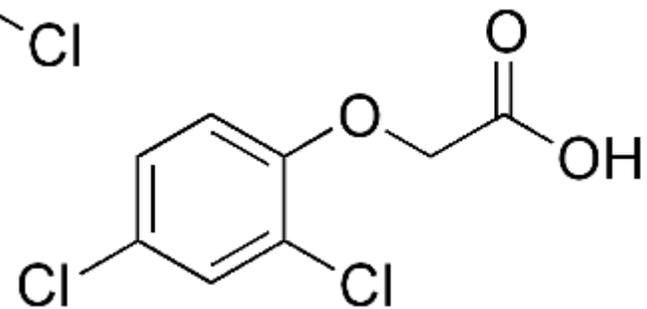

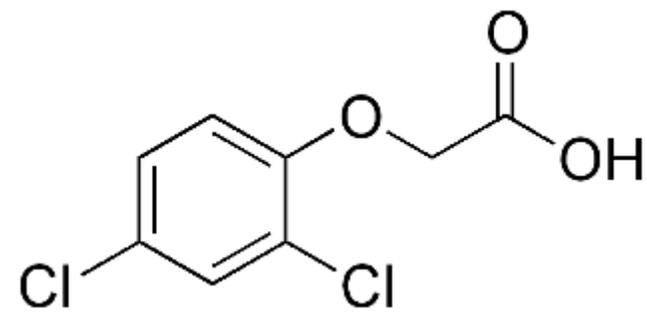

No Phylogenetic Relationship

Most species impacted by environmentally relevant concentrations of 2,4-D

Most species impacted by environmentally relevant concentrations of 2,4-D
