Run Through a Wall

Lake Management Planning

- **Why is Planning Important**
- **The Planning Process**
- **Key Partners in Developing a Lake Plan**
- **Lake Management Plan Titles and Components**
- **Successful Implementation of Management Recommendations**
- **Grants**

Why Is Planning Important?

- **Development**
- **Habitat**
- **Fish / Aquatic Plants**
- **Recreational / Human Use Conflicts**
- **Nutrients / Water Quality**
- **Aquatic Invasive Species**

The Planning Process

- **Appraisal of Existing Information**
- **Public Education and Involvement**
- **Collecting New Data**
- **Analysis**
- **Recommendations**
- **Implementation**

Who is Involved in Developing a Lake Management Plan?

- **WDNR**
- **Applicant (sponsor or other partners of a grant/project,)**
- **Private sector**
- **Stakeholders**

Deciphering the Terminology

- **Comprehensive Lake Management Plan**
- **Lake Management Plan**
- **Aquatic Plant Management Plan**
- **AIS Control / Management Plan**

What Is a Lake Plan?

➤ NR 198

- Aquatic Invasive Species Control Grants

➤ NR 191

- Lake Protection & Classification Grants

➤ Aquatic Plant Guidance Document

<http://www.uwsp.edu/cnr/uwexplakes/ecology/APM/APMguideFull07.pdf>

Comprehensive Lake Management Plan Components

- **Public Involvement & Education**
- **Watershed**
- **Water Quality**
- **Aquatic Plants**
- **Shoreland**
- **Woody habitat**
- **Fisheries**
- **AIS**
- **Capacity**
- **Other**

Public Involvement & Education

- Educational Activities
 - Workshops / Trainings
 - Packets / Literature
 - Presentations / Articles
- Planning Meetings
- User Surveys
- LISTEN

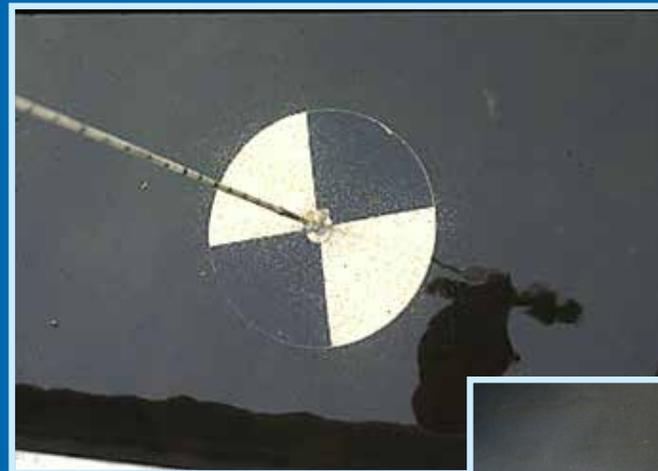

Watershed

- **Delineate size & land uses**
- **Partition nutrient loading**
 - **Identify / prioritize nutrient loading concerns**
- **Assess riparian / shoreland area**

Water Quality

➤ Citizen Lake Monitoring Network

- Secchi
- Phosphorus
- Chlorophyll *a*

➤ Other Parameters

- Nitrogen, Calcium
- Suspended Solids
- Temperature, Dissolved Oxygen

➤ Trophic State Index (TSI)

➤ Limiting nutrients

Aquatic Plants

- **Floristic Quality Index (FQI)**
- **Plant Communities**
 - Submerged
 - Emergent
 - Floating
- **Diversity**
- **Vouchers**

Shorelands

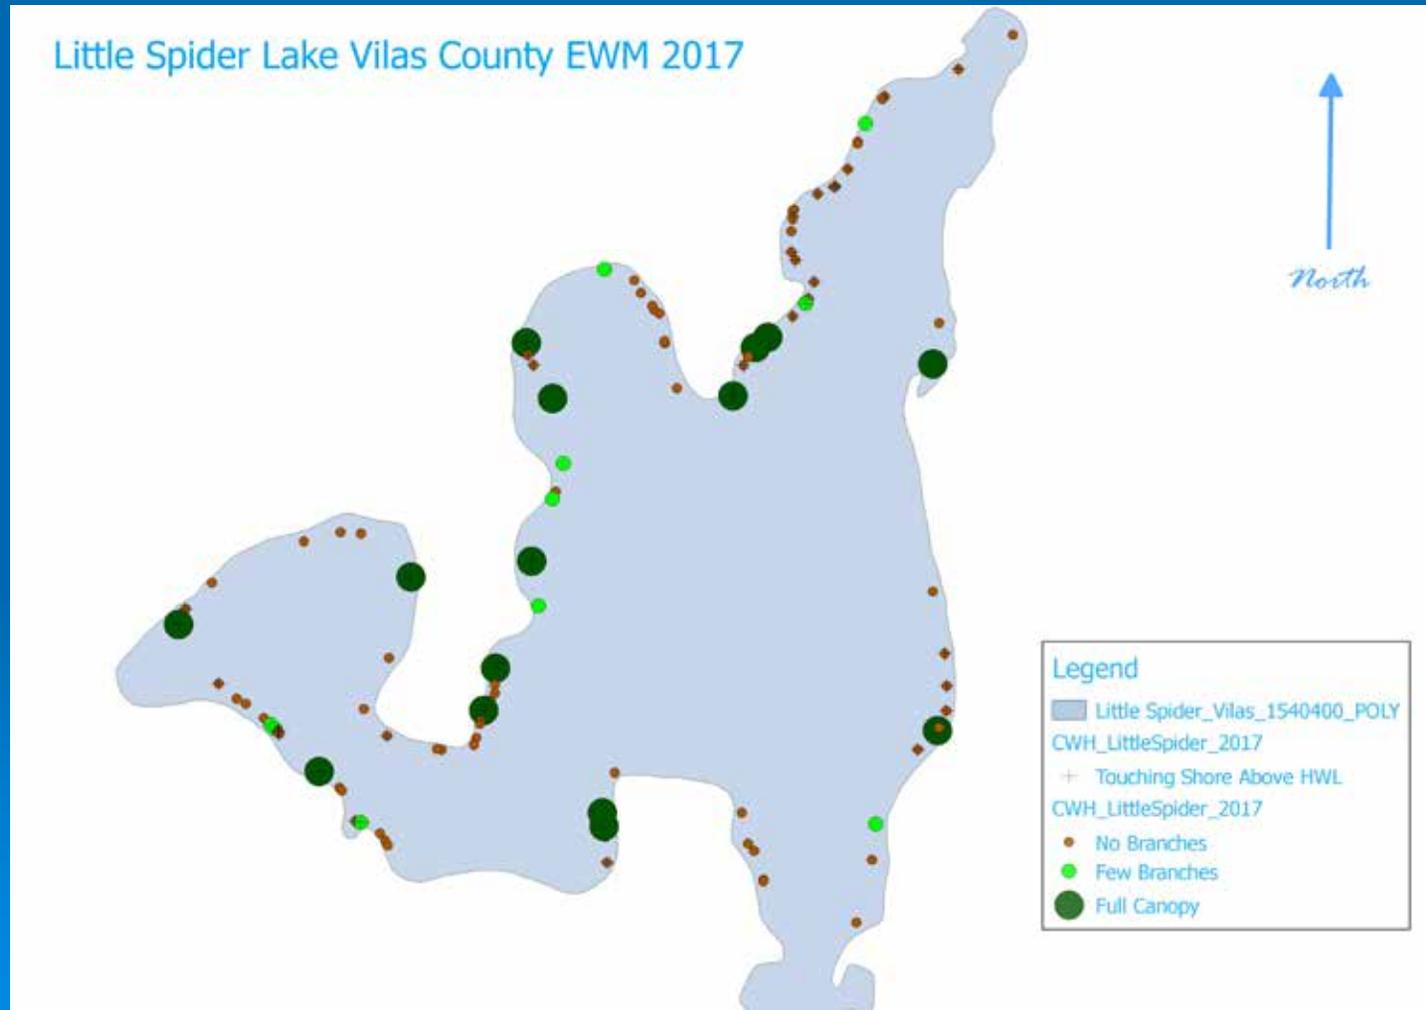

- Parcel assessment
- Near shore area
 - 35' above OHWM
 - 50' below OHWM

- Impervious surfaces, piers, erosion, canopy, shrubs, grasses, aquatic plants.....

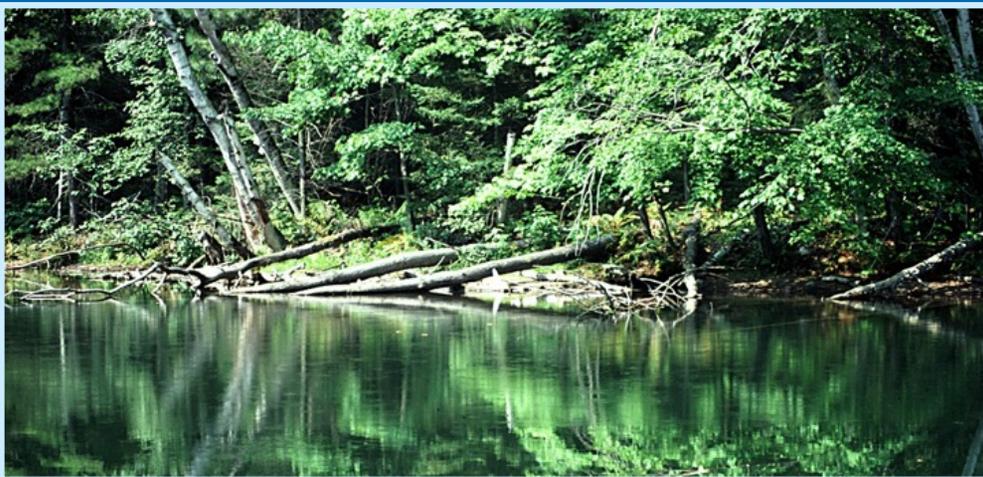

Coarse Woody Habitat

Fisheries

- Existing community / life history
- Relate current fish populations to study
- Evaluate potential management impacts to fish community

Aquatic Invasive Species (AIS)

- Monitor and Map existing AIS
- Look for new AIS
- Prevention / Containment
- Control

Capacity

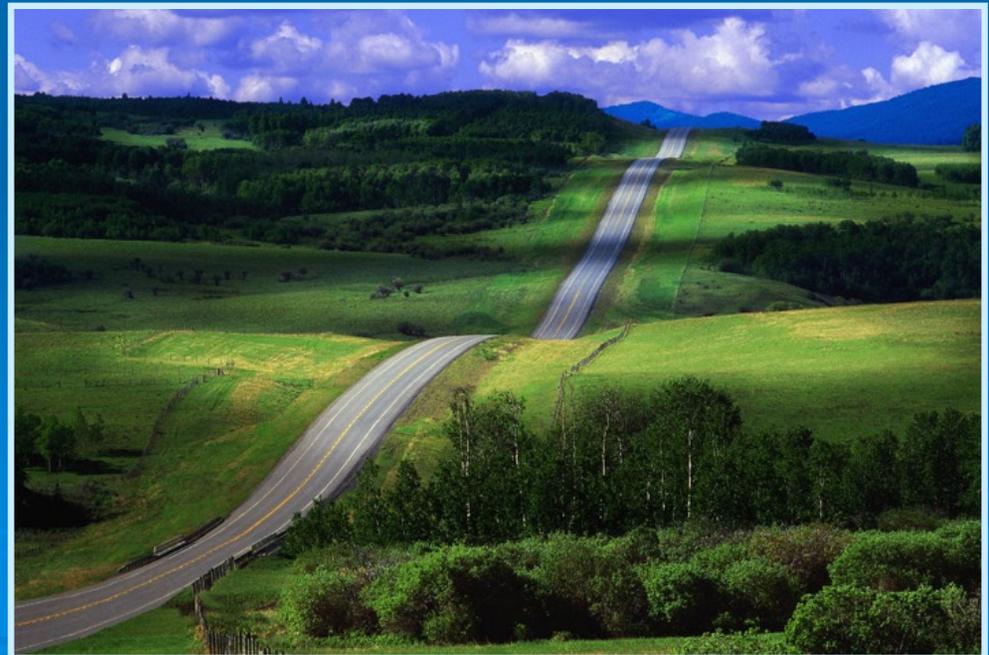

The Planning Process

- Appraisal of Existing Information
- Public Education and Involvement
- Collecting New Data
- Analysis
- Recommendations
- Implementation

Implementation

- Road map for next 5 years
- Recommendations from components
- Dept approved plan
- Identifies the
 - Who
 - What
 - When
 - Where
 - How

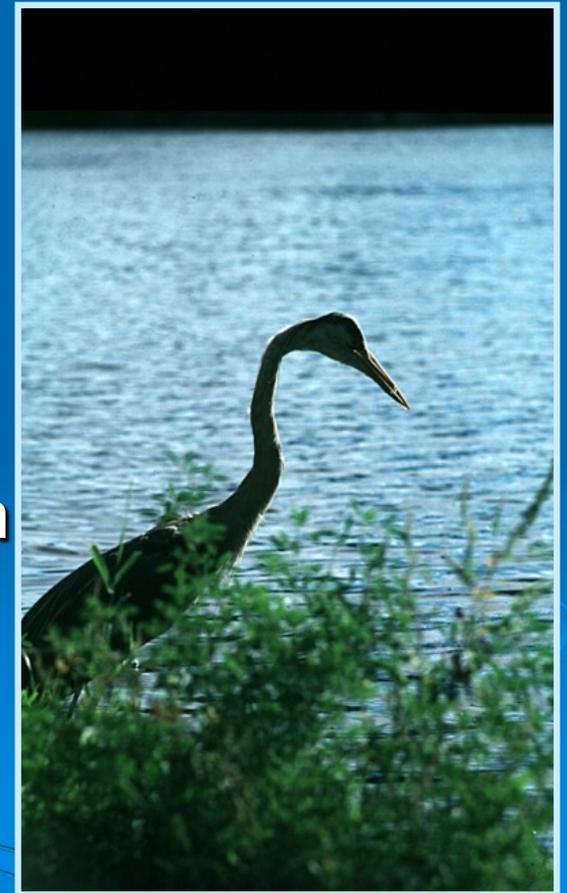

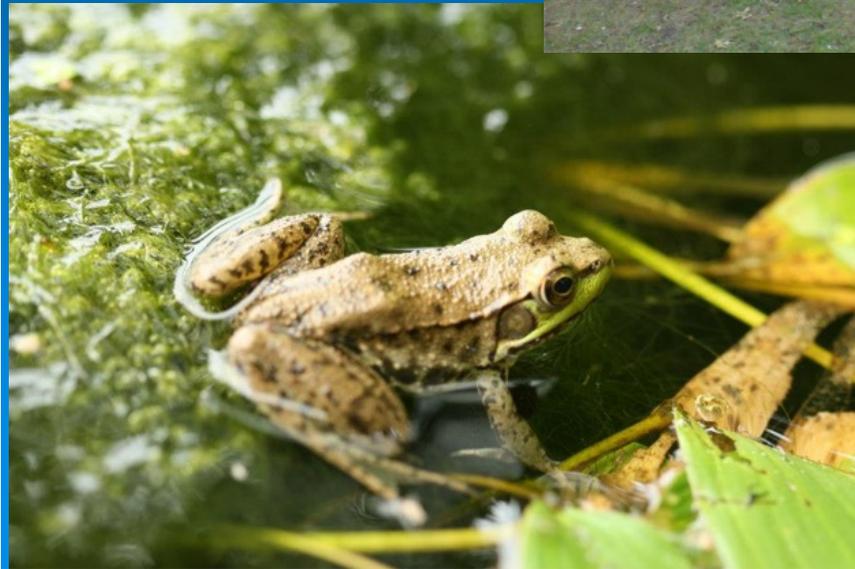

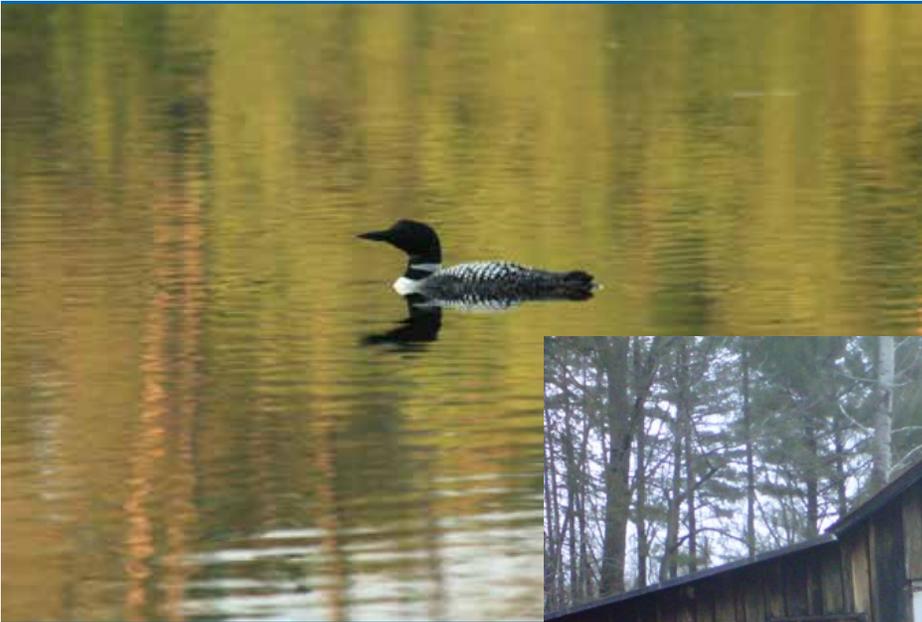

Management Recommendations

- Active management (nutrients, habitat, social)
- Monitoring activities (CLMN – water quality, AIS, aquatic plants)
- AIS prevention
- Lake protection options (conservation easements – land trusts)
- Education
- Others (ordinances, critical habitat, fisheries, lighting, noise, etc.)
- Go Fishing (Insert any interest, other than “cleaning” the shoreline.....)

WDNR Surface Water Grants

- **Lake Planning Grants**
 - Small scale
 - Large Scale
- **Lake Protection Grants**
- **Healthy Lakes**
- **Aquatic Invasive Species Grants**
 - Education, Planning and Prevention
 - Rapid Response
 - Established Population
 - Research and Demonstration
 - Maintenance

Questions
