## Unique Properties of Water

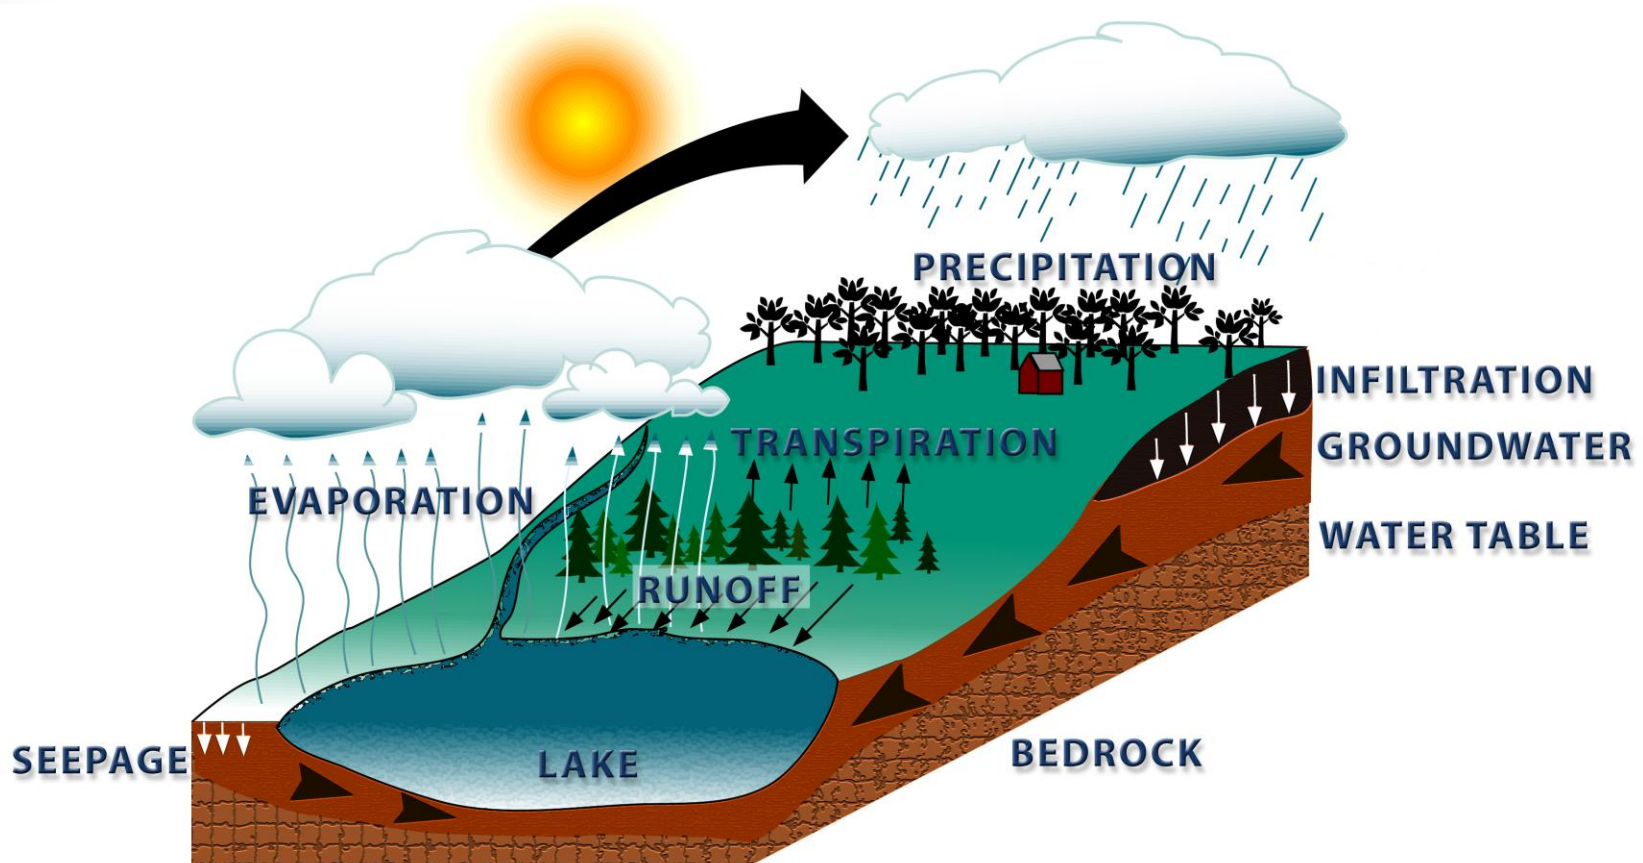

- Living organisms (including us!) are ~70% water
- 71% Earth's surface covered by water
- <1% water on Earth is freshwater
- .009% water on Earth is freshwater lakes

# ***RESOURCE GOAL SETTING***

***FRAME LAKE GOALS IN  
THE CONTEXT OF  
SOCIEATAL RESOURCE  
VALUES AND  
ECOLOGICAL VALUES***

***Goal I. Protect water clarity, prevent the occurrence of algae blooms and reduce nutrient levels in Long Lake.***

- The families and individuals, particularly our children, deserve to have a lake with clean water to use and enjoy. Protecting water quality will be achieved by reducing the spring turnover total phosphorus concentration to 16-18 ug/l and summer surface total phosphorus concentration to 14-15 ug/l.

# **OBJECTIVE STATEMENTS**

- Conduct 2 year pilot project for up to 30 riparian properties which will control stormwater runoff and restore natural shoreland buffers. These restorations will serve as demonstrations at multiple sites around the lake. 2007 and 2008. Lake District, Chippewa County, WDNR.
- Apply for lake management planning grant in January 2007 to fund staffing to conduct inventory, planning and design for stormwater runoff and shoreland restorations. 2007. Lake District, Chippewa County.
- Apply for lake protection grant in April 2007 to implement up to 30 stormwater plans and shoreland restorations. 2007. Lake District and Chippewa County.
- Apply for lake management planning grant July 2008 to conduct community based social marketing assessment. This assessment will be used to determine the most effective strategies to obtain 60 – 80 percent participation of riparian property owners for installing stormwater management practices and shoreland buffer restorations. 2008 Lake District.

# Cooperative Agreement for the Restoration and Improvement of Lake Tomah

This cooperative agreement between the City of Tomah, Monroe County Land Conservation Department and the State of Wisconsin Department of Natural Resources will govern the implementation of management actions identified in the Lake Tomah Management Plan July 2008. The community of Tomah through the City Council and the Lake Committee (community members appointed by the mayor and approved by City Council) working in partnership with community residents, the Monroe County Land Conservation Department staff and staff from the Wisconsin Department of Natural Resources have completed an Lake Tomah Revitalization Plan. This plan outlines a framework of lake stewardship activities which will provide improved motorized and non-motorized recreational activities, fishery, fish and aquatic life habitats and water clarity. This lake plan includes clearly defined goals and activities which will be the road map to improve the attributes of Lake Tomah which are valued by the residents of the community.

The cooperators agree to commit to implement the restoration activities identified in the Lake Tomah Restoration Plan. The City of Tomah, Monroe County Land Conservation Department and Wisconsin Department of Natural Resources commit to work together to implement the objectives identified in the plan by providing volunteer time, staff time and financial resources as described in the plan to achieve the goals identified in the plan. The achievement of the goals will improve the quality of the recreational experiences for all who enjoy the recreational opportunities provided by Lake Tomah.
