

A scenic view of a lake framed by tree branches, with text overlaid. The lake is in the center, surrounded by lush green trees and foliage. The sky is visible through the branches at the top.

Modeling Lakes?

**Center for Watershed Science & Education
UW- Stevens Point**

Lake Leaders 2010

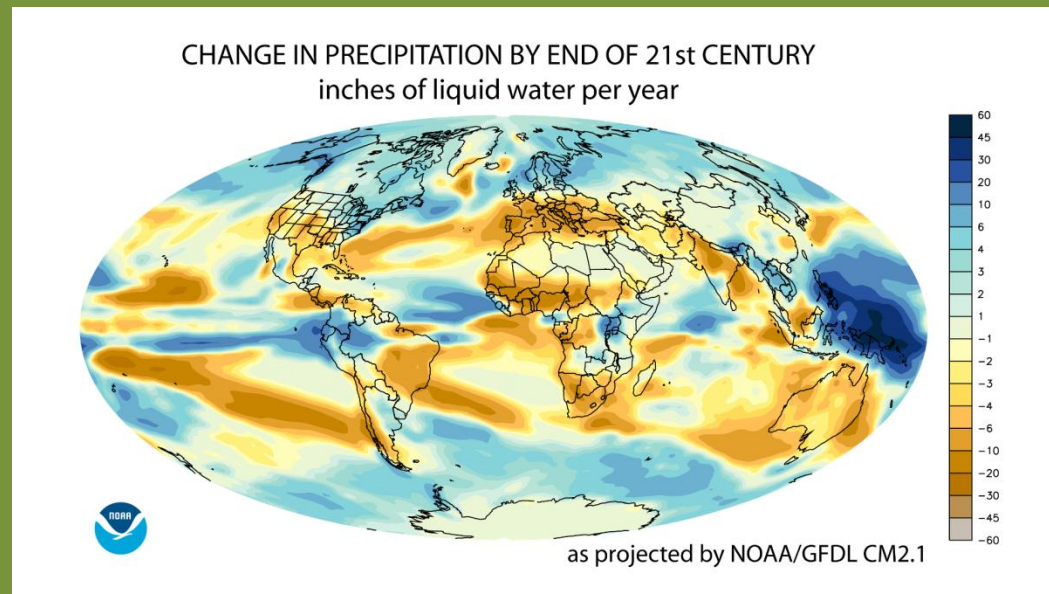

What's a model

One definition: A mathematical description to help visualize something

What's a model

One definition: A mathematical description to help visualize something

80 lb
Phosphorus/yr

325 million
gallons/year

**A model for
the
phosphorus
concentration
in a lake**

**Amount of
Phosphorus**
= -----
**Amount of
Water**

**80 lb
Phosphorus/yr**

**325 million
gallons/year**

= 80 lb/ 325 million gallons =

**80 lb
Phosphorus/yr**

**325 million
gallons/year**

= 80 lb/ 3 billion lbs water=

**80 lb
Phosphorus/yr**

**325 million
gallons/year**

$$= 80 \text{ lb} / 3 \text{ billion lbs water} = 27 \text{ ppb}$$

Why Model?

- **Groundwater flow— where water is coming from?**
- **Lake concentration —what if we change the amount added?**
- **Watershed modeling— can watershed changes help and by how much?**
- **In-Lake Restoration – “experiment” with treatment, diversions etc.**

Rule #1

“All models are wrong but some are useful”

George Box

Watershed Models

A photograph of a forest with several tree trunks and green foliage in the background.

300,000
microgram
/liter

A photograph of a lake with a blue sky and green trees in the distance.

40
microgram
/liter

A solid yellow horizontal banner.

Land is a concentrated nutrient source

**Simple Model:
Assign annual
transfer rate to
different land
uses**

**Complex Model:
Simulate every storm,
interaction with ground,
conveyance to channel,
transport to lake**

Rule #2

“Make everything as simple as possible, but not simpler”

A. Einstein

Lake Models

FISH

**Water
Quality**

Zooplankton

Bacteria

Algae

NUTRIENTS

WATER

Lake Models

Phosphorus Concentration ($\mu\text{g/l}$)	Productivity
10	Low (Oligotrophic)
10-20	Medium (Mesotrophic)
Greater than 20	High (Eutrophic)

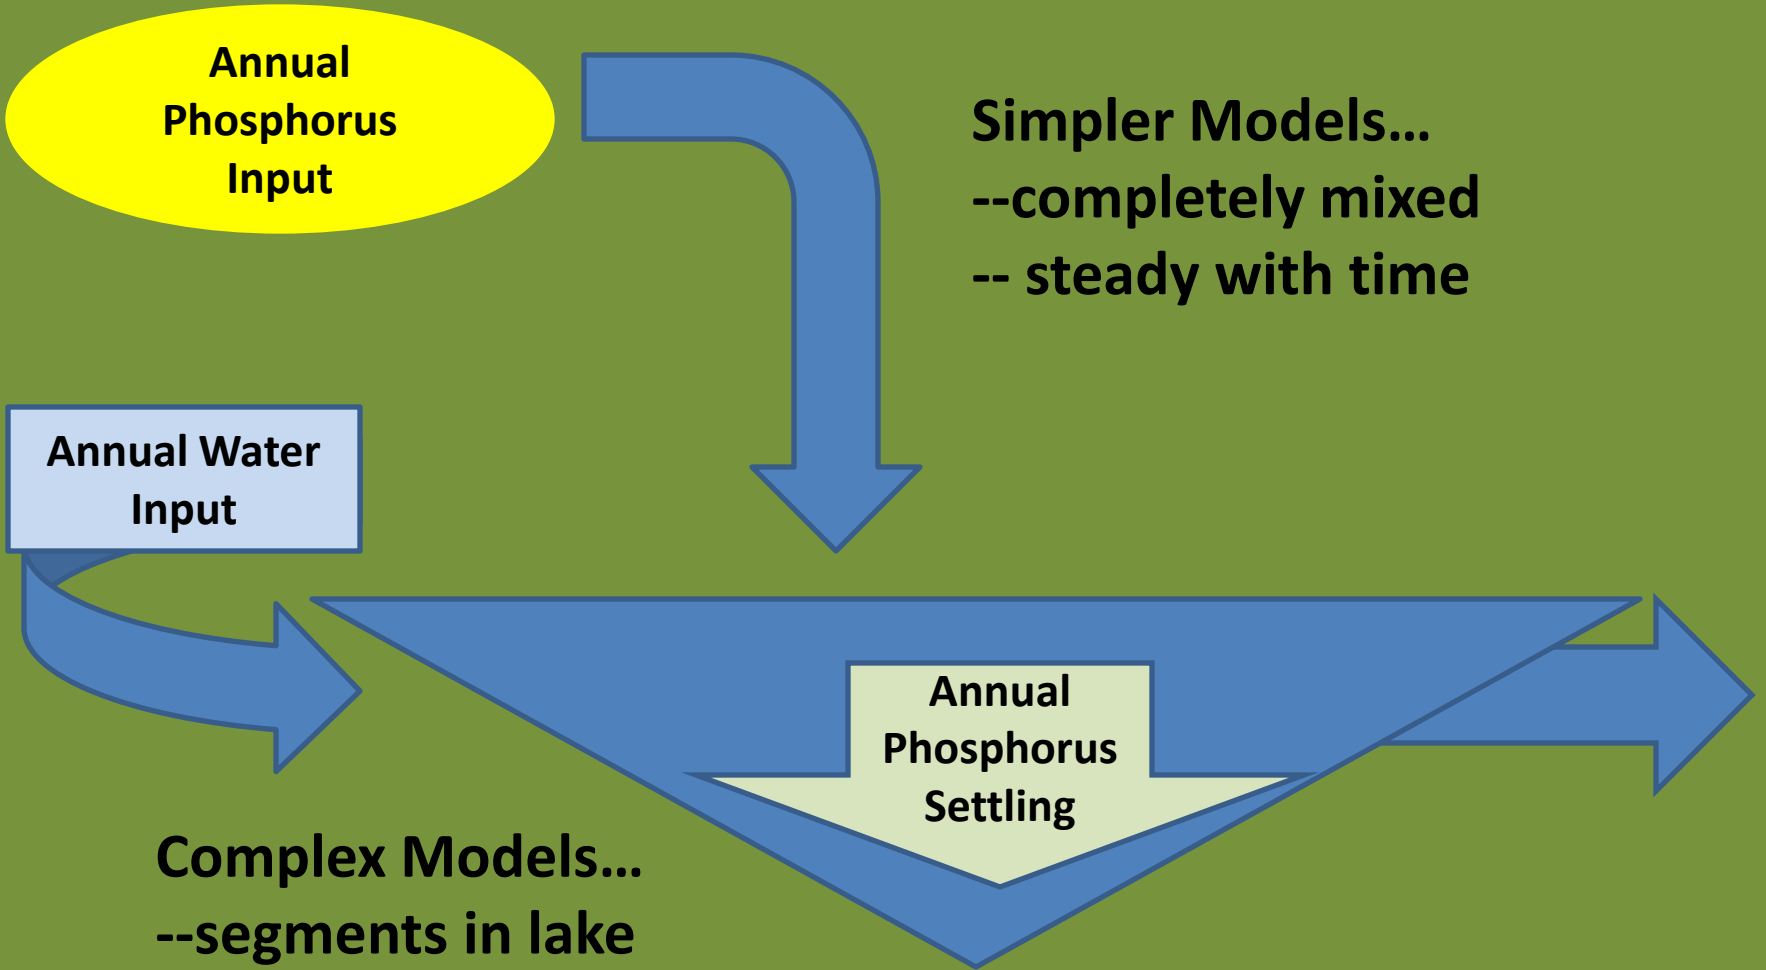

**Annual
Phosphorus
Input**

**Annual Water
Input**

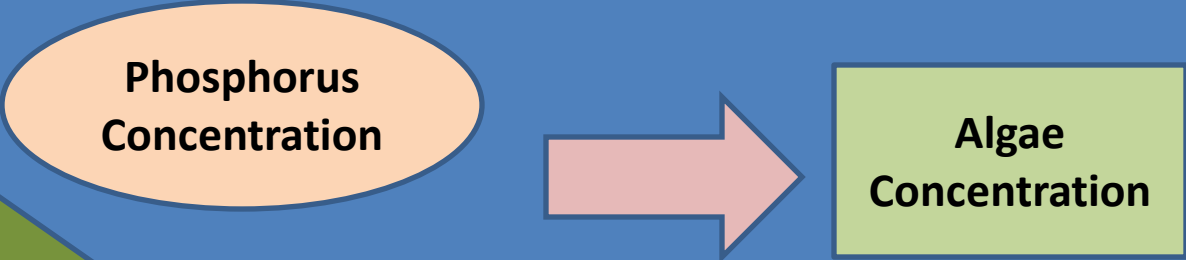

Simpler Models...
--completely mixed
-- steady with time

**Annual
Phosphorus
Settling**

Complex Models...
--segments in lake
--vary with time
--biology!

Lake Response Model?

**Phosphorus
Concentration**

**Algae
Concentration**

Application to Portage County

Median Nitrate

Median Chloride

Median Total Phosphorus

Median Chlorophyll A

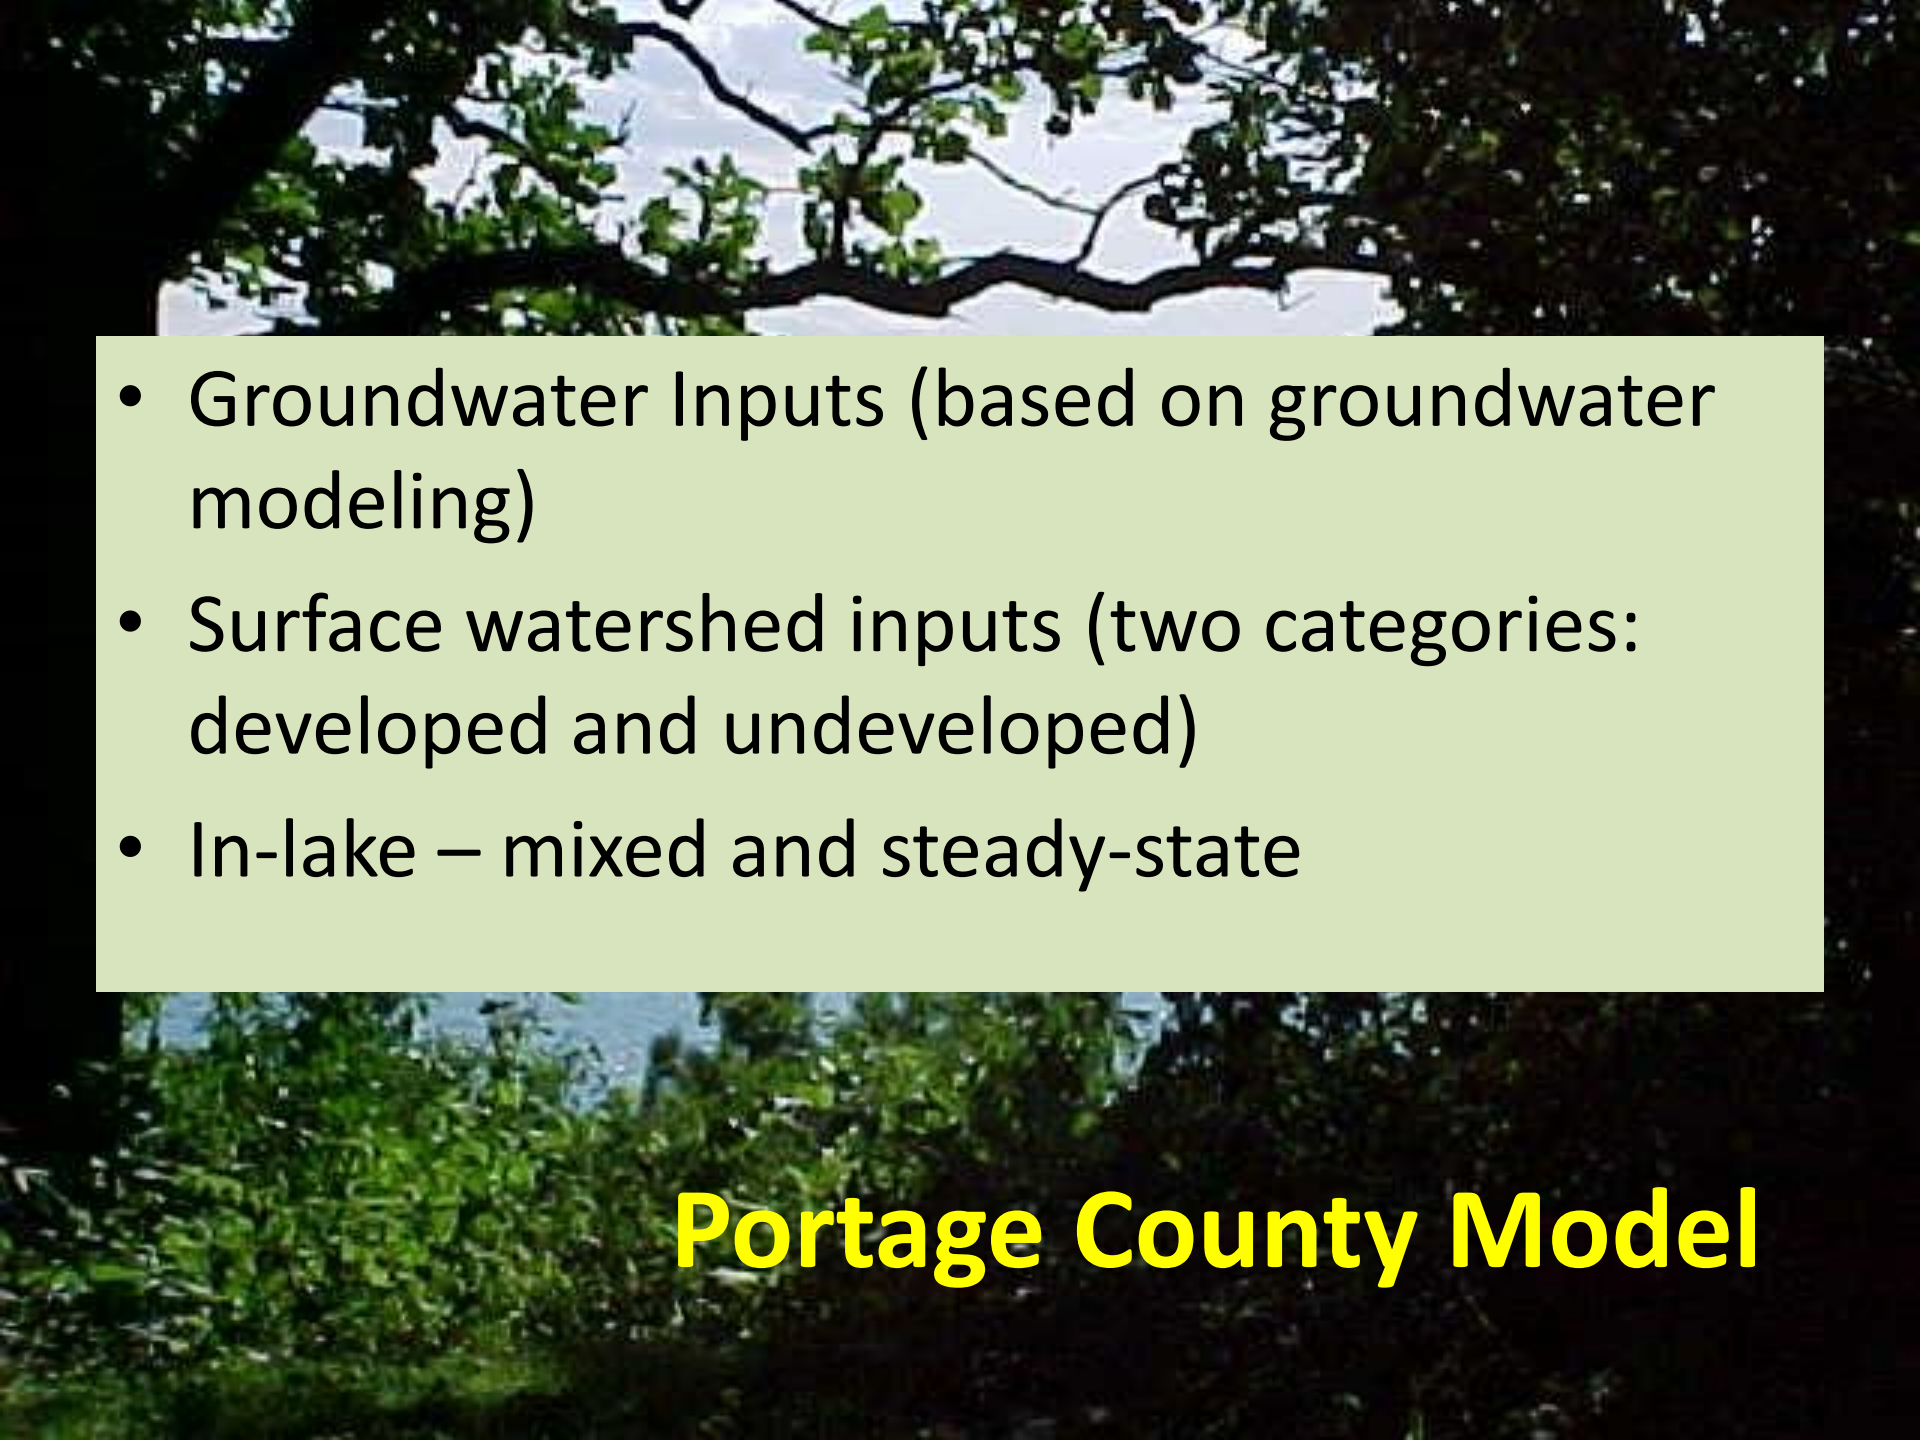

Average Total Hardness in Portage Co. Lakes

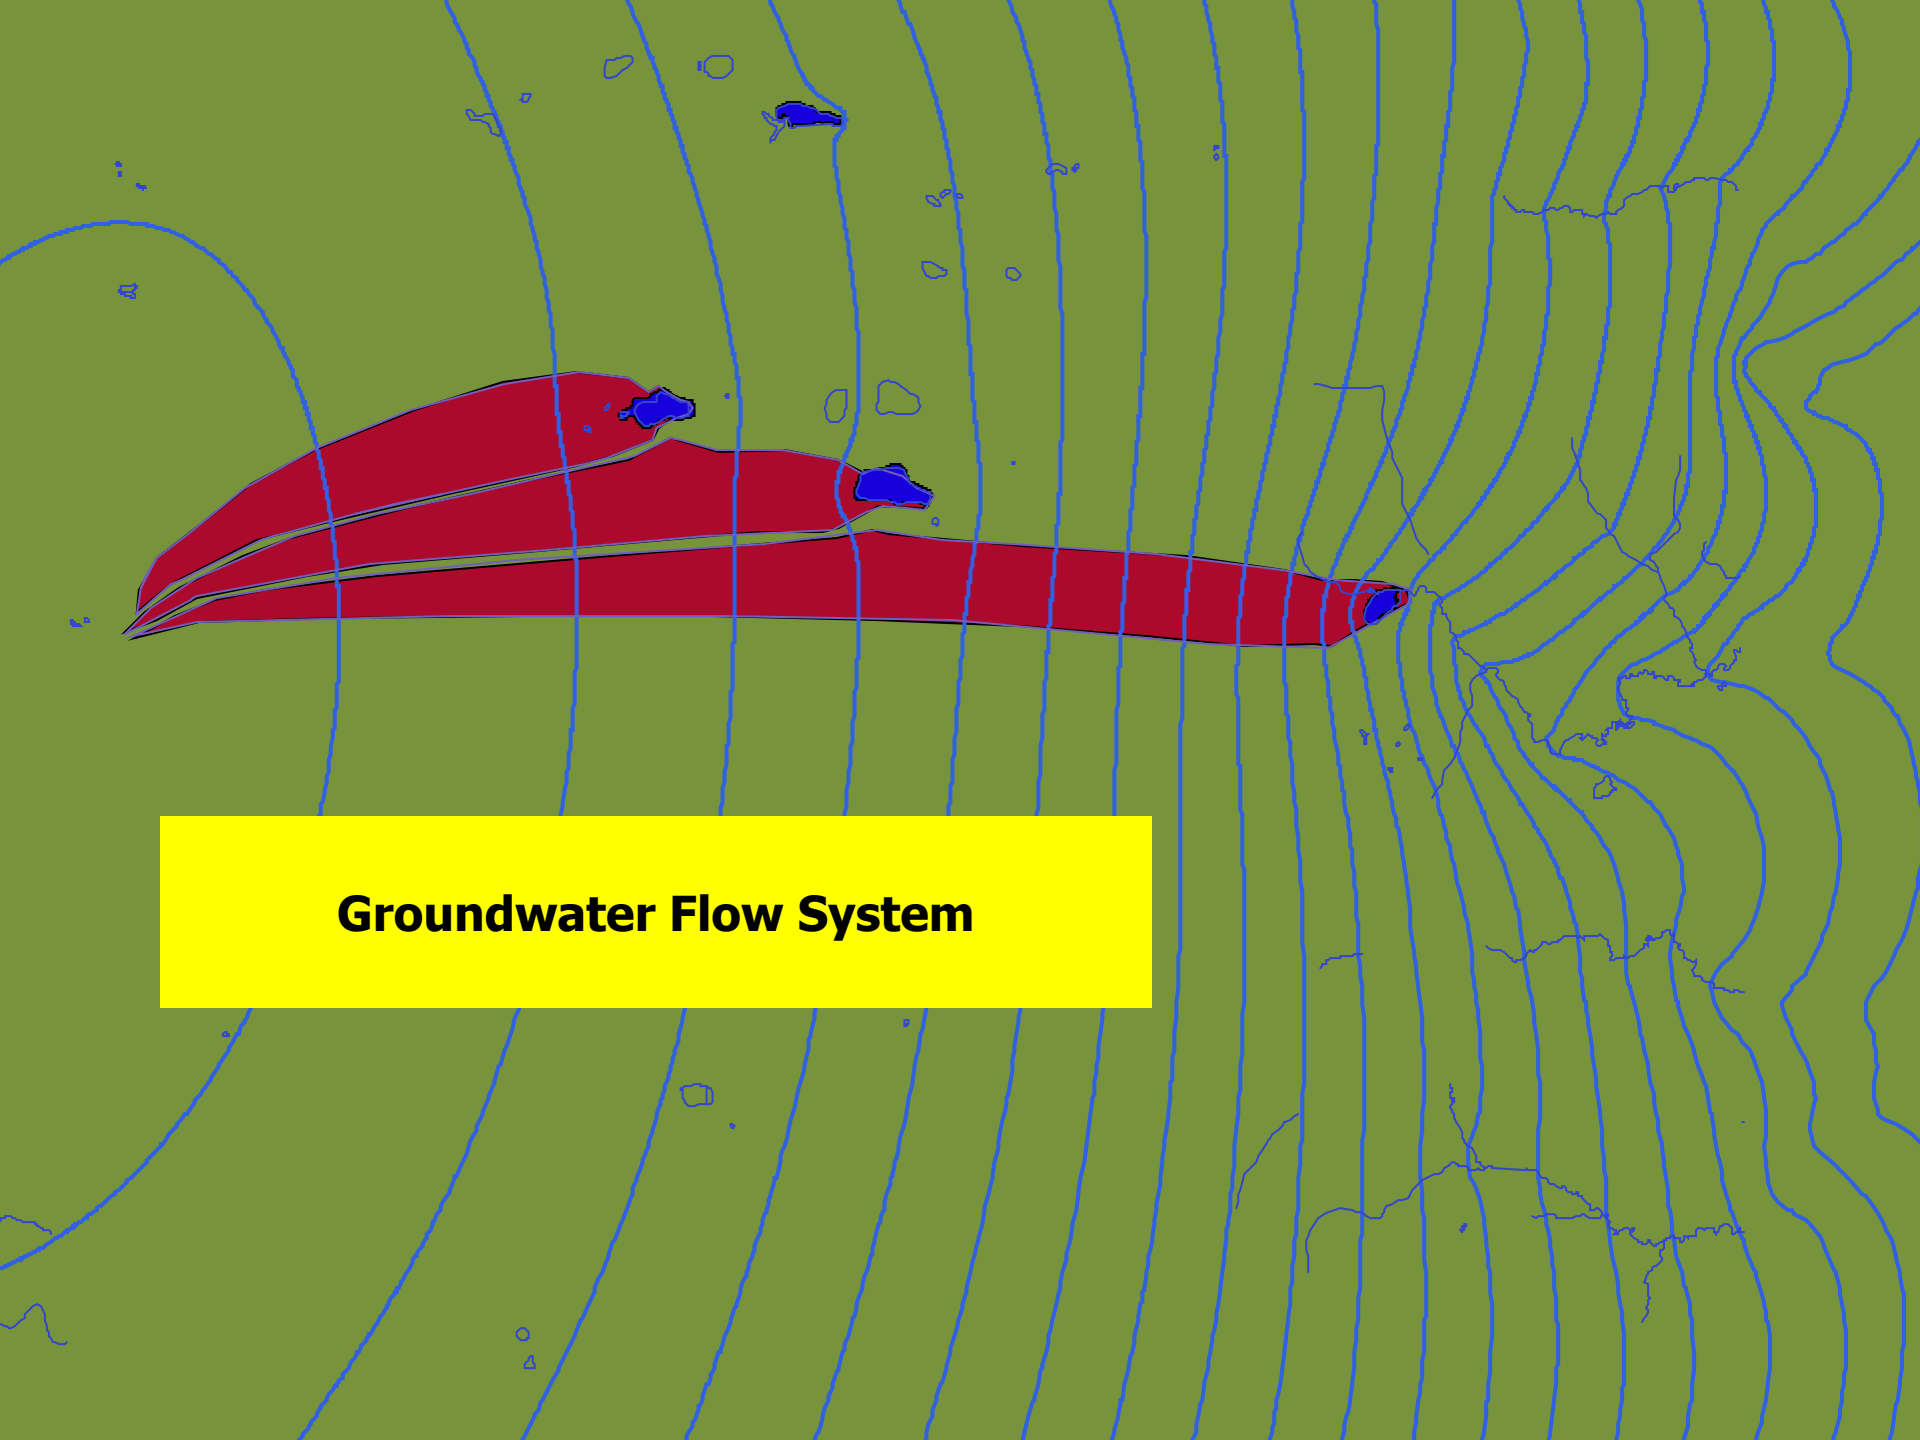

Median pH

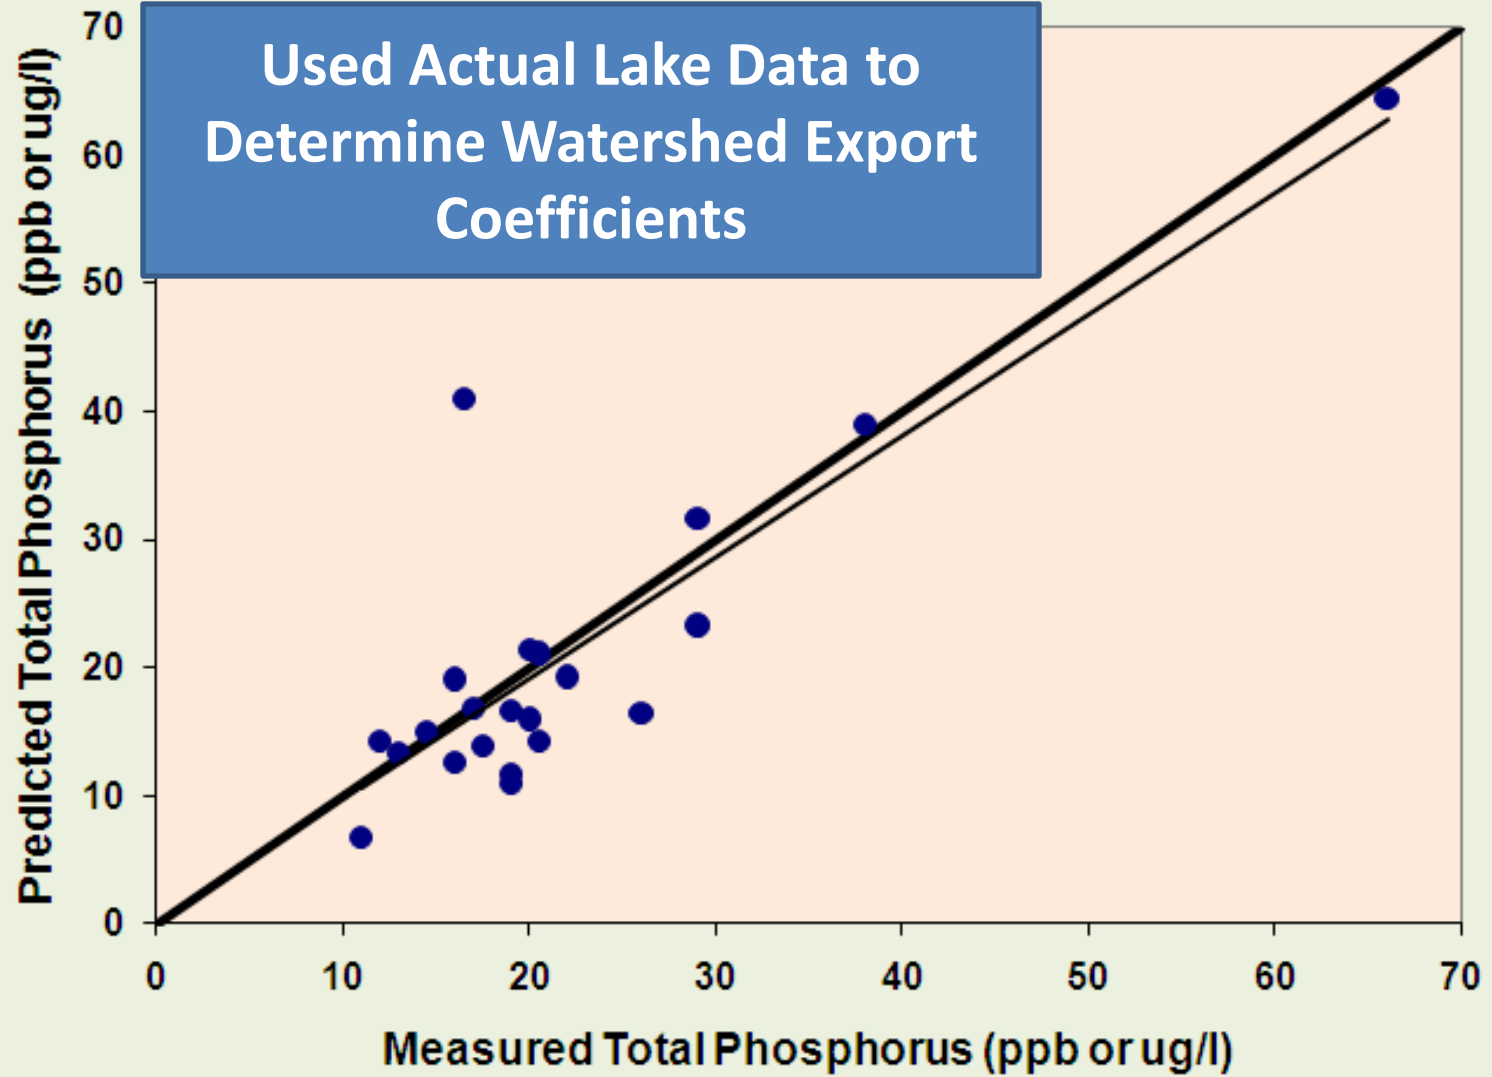

- 
- Groundwater Inputs (based on groundwater modeling)
 - Surface watershed inputs (two categories: developed and undeveloped)
 - In-lake – mixed and steady-state

Portage County Model

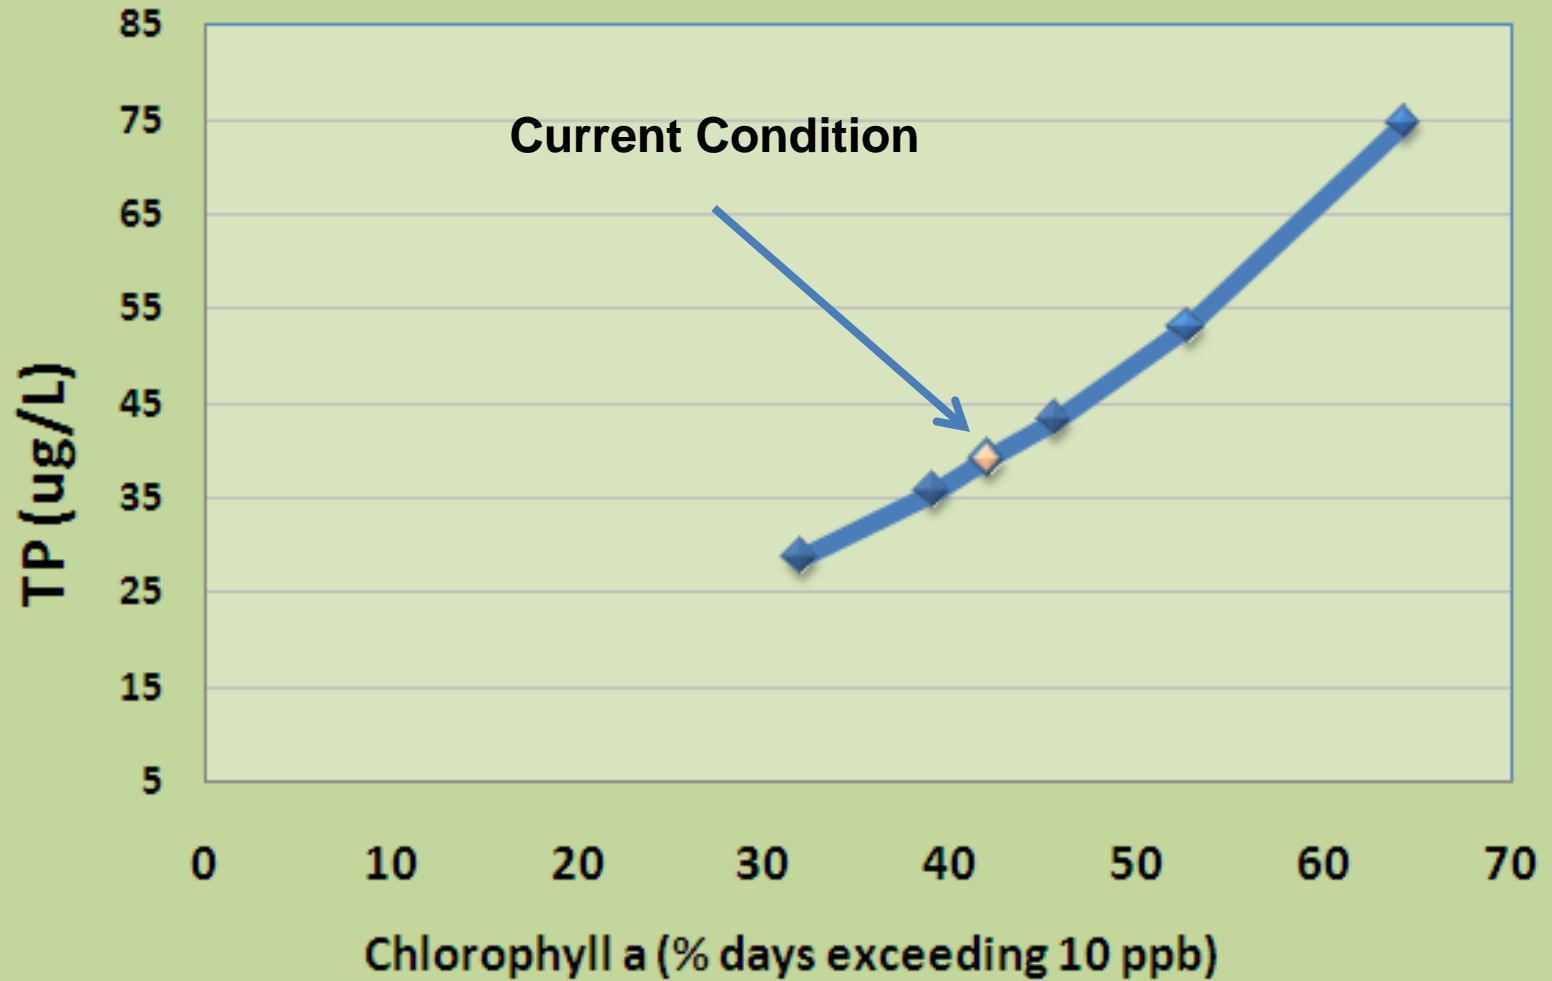

Groundwater Flow System

Used Actual Lake Data to
Determine Watershed Export
Coefficients

Phosphorus/Algae Response Curve

A scenic view of a lake framed by trees, with the word "Questions" overlaid in yellow text. The lake is calm and reflects the sky, surrounded by lush greenery and a forested shoreline in the distance. The foreground is dominated by dark, silhouetted tree branches and foliage, creating a natural frame for the water. The word "Questions" is centered in a bold, yellow, sans-serif font.
